It is our distinct privilege and pleasure to welcome you to Boston for the 44th Annual Meeting of the International Neuropsychological Society (INS). Boston is an intellectually vibrant community that is home to upwards of 100 world-class universities, colleges, and hospitals. Its historical and cultural roots in both the U.S. and in neuropsychology make Boston a truly unique and exciting destination.

The theme of the 2016 Annual Meeting of INS in Boston—Neuropsychology: Spanning the World and Disciplines—reflects an appreciation of the international and multidisciplinary contributions to neuropsychology and INS. At its best, the field of neuropsychology has been a collaborative endeavor, significantly influenced by a number of related disciplines including cognitive psychology, behavioral neurology, biophysics, computational neuroscience, and psycholinguistics. This year’s program features leading plenary speakers and symposiasts, from a number of different countries and disciplines, who will cover a breadth of topics from brain-behavior relationships to multi-modal imaging approaches, and statistical modeling targeted at neuroscience research. This multidisciplinary and international approach is necessary for the most expedient advancement of understanding of brain-behavior relations in global contexts.

Much gratitude is extended to Raul Gonzalez, INS Chair of Continuing Education, for providing such a dynamic and wide range of intellectually stimulating sessions. Twice yearly, Raul works tirelessly to provide relevant and timely content sessions taught by experts in their respective fields.

We would also like to extend our sincere thanks to Gordon Chelune, INS Executive Director, and the collaborative team in the INS office—Tandy Pietro, Chantal Marcks, and Jane Laird—for their dedicated guidance and expertise in developing and constructing this program.

It is our hope that you enjoy the scientific program and your time in Boston, as well as the opportunity afforded by the Meeting to engage with new and old friends and colleagues.

Best,

Ann D. Watts and Rosemary Fama

Welcome to INS Boston 2016!

Please visit the INS Registration Desk upon your arrival for your badge and registration materials. Please note that entry into sessions and events is only allowed to those wearing an INS badge.

Ins Registration Desk

The INS Registration Desk is located on Level Four, in the hotel’s central Atrium area. Please visit us during our open hours listed below:

Registration Desk Hours:
- Tuesday, February 2: 4:00 PM–7:00 PM
- Wednesday, February 3: 8:00 AM–6:00 PM
- Thursday, February 4: 7:00 AM–5:30 PM
- Friday, February 5: 7:00 AM–5:30 PM
- Saturday, February 6: 7:00 AM–2:00 PM

Official Venue & Headquarter Hotel

The official meeting venue and headquarter hotel of the INS 44th Annual Meeting is the Boston Marriott Copley Place. Almost all events occur on-site, making the headquarter hotel the preferred choice for most attendees.

The hotel is ideally located in the heart of Boston’s famed Copley Square, in its stylish Back Bay neighborhood—minutes away from the Boston Common, the Shops at Prudential Center, and Newbury Street shopping. The rest of Boston is immediately accessible via immediately adjacent MBTA subway and Amtrak train stations, both located just 0.2 miles from the hotel’s door. Other transportation options include taxi, car rental, private shuttle service, or personal auto (valet parking is available at the hotel).

Boston’s Logan International Airport, the arrival point for many attendees, is just 3.2 miles from the hotel.

There is wireless internet access available in guest rooms in the INS room block for a discounted rate, or attendees may enroll in Marriott Rewards to receive FREE wireless internet in their hotel room. Join at www.marriott.com/rewards/createAccount/createAccountPage1.mi?enrollmentSourceCode=3528.
Admittance & Badge
Please wear your INS name badge at all sessions and events during the Annual Meeting, including ancillary meetings. Lost badges may be replaced at the INS Desk.

Internet Access
Wireless internet access is available to attendees in all INS meeting space, in both the meeting rooms and in the Atrium areas reserved for the INS Meeting. The INS network name and password will be posted on-site.

Candidate Interviews
Rooms designated for candidate interviews are the Hyannis, Orleans, and Yarmouth (on Level Four), as well as the Simmons Room (on Level Three). Interview rooms will be open from 7:00 AM to 8:00 PM each day from Tuesday through Friday, and from 7:00 AM to 3:00 PM on Saturday. Please check the on-site message boards for posted interviewing opportunities. Please Note: Interviews are arranged independently between interviewers and candidates. The INS does not coordinate interviews.

Certificates of Attendance
If you require a certificate documenting your attendance, please inquire at the INS Registration Desk. You may also obtain a certificate after the meeting is over by emailing INS@utah.edu.

Continuing Education
For CE registration requirements and information, please see the next page. For CE course and program requirements, including post-course evaluations and certificates, please see the CE section of this book.

Published Meeting Proceedings
The complete scientific program and abstracts listing for the INS 44th Annual Meeting will be published in an online, supplemental issue of the Journal of the International Neuropsychological Society: JINS, Volume 22 (2016). All supplemental issues of JINS are freely available online, without a subscription. Prior to their publication in JINS, the 44th Annual Meeting proceedings (including the schedule, abstracts listing, and author and keyword indices) may be viewed or downloaded in PDF format via the INS website at www.the-ins.org/annualmeeting_2016.

INS Boston App
Don’t forget to download the INS 2016 Annual Meeting app for your mobile phone, tablet, or even to use on your personal computer. Use it now, during the meeting, and refer back to it as needed in the future! The INS meeting app lets you view the complete program schedule, including the electronic program book, invited speaker bios and abstracts, Boston travel and destination information, and much more.
To download and start personalizing the app, search for “INS 2016” at the Apple Store or Android Market, or visit tripbuildermedia.com/apps/INS2016.

How to Upload Your Presentation Handout
INS will send an email to submitting abstract authors with a link to upload an optional PDF handout for their presentation. Handout files must be PDF, PPT, XLS, DOC, TXT, PNG OR JPG and cannot exceed 1 MB. You can also upload a URL link for a handout.

How to Upload Your Photo
Once you have downloaded the app, you can add yourself to the list of attendees by completing the “MyProfile” section (you can choose how much of your information to share).
To upload your photo to MyProfile, click on the MyProfile icon within the app and click Edit, then follow the prompts. Photo files must be portrait orientation and no larger than 256 KB. The ideal size for photos is 85 pixels wide x 100 pixels high (otherwise skewing of the image may occur).
What is Included in Registration?

The general meeting registration fee includes all plenary sessions, invited symposia, and all other General Sessions—each described below—as well as all receptions, coffee breaks, and INS events. It also allows attendees to take advantage of INS meeting space by participating in candidate interviews, or in ancillary events that are arranged by individuals and organizations.

The only sessions not included in the general fee are Continuing Education (CE) Workshops. In order to attend CE workshops, attendees must pre-register and pay an additional course fee.

1. Some events are by-invitation only.
2. CE Credit for Plenary attendance is also not included in this fee.

General Sessions

General sessions are the heartbeat of the Annual Meeting’s scientific program, and are open to everyone who has paid the general fee. General sessions include all paper, symposia, and poster sessions—as well as plenary addresses, invited symposia, and INS-hosted events.

PLENARY SESSIONS

ALL registered attendees are welcome and encouraged to attend plenary sessions—advance registration is NOT required.

In addition, all plenary sessions are each offered for one hour of optional CE credit to those who complete all CE requirements and submit the separate CE fee.

Please Note: Volunteer proctors will be posted at the entry to each Plenary Session to distribute CE attendance slips. Attendees do not need to complete and submit a CE attendance slip unless they plan to seek CE credit for their participation in the session (either now or in the future).

SOCIAL EVENTS & EXHIBIT HALL

Your INS badge allows entry to all official social events at the Annual Meeting, including daily networking with colleagues old and new in the Gloucester Hall, where all poster sessions, coffee breaks, and Exhibitors are located, as well as during both evening receptions on Wednesday and Friday.

Please see the Sponsors & Exhibitors section for a complete listing of the 44th Annual Meeting’s Official Sponsors, as well as an alphabetical listing of exhibitors in Boston.

Attending CE Workshops?

Volunteer proctors will check attendee badges at the door to verify registration (only registered attendees will be admitted).

For CE course and program requirements, including post-course evaluations and certificates, please see the CE section of this book.

44th Annual Meeting
Social Events

INS Receptions

Don’t miss the INS Welcome Reception on Wednesday, February 3rd from 6:30–7:30 PM in the Third Floor Atrium & Lounge.

On Friday, February 5th, join us for the INS President’s Reception from 6:30–7:30 PM in the Third Floor Atrium & Lounge.

Receptions are intended for registered INS meeting attendees only.

Student Social, Hosted by the INS Student Liaison Committee (SLC)

Trainees of all levels are welcome to join the INS SLC at their bi-annual Student Social for mingling and light refreshments. The Social will be held on Thursday, February 4th from 7:00–9:00 PM at Lir Irish Pub & Restaurant at 903 Boylston Street.

Massachusetts Neuropsychological Society (MNS) Locals Lounge

The MNS will host a locals lounge in the Suffolk Room on Level Three each day of the meeting.

What do you get when you combine one neuropsychologist, a neurologist, an oncologist, two neuroscientists, and one MD/PhD student? That’s What She Said.

Don’t miss What She Said performing LIVE at the INS President’s Reception!

What She Said digs deep into the vaults of classic rock, R&B, punk, and reggae to play tunes in their own original style. Featuring:

Vocals: Allison Berger, PhD (day job, Harvard-affiliated clinical psychologist)
Lead Guitar & Vocals: Jon Dashkoff (day job, MD/PhD student at BU)
Lead Guitar & Vocals: Jeff Peppercorn, MD (day job, oncologist at Massachusetts General Hospital)
Keyboards: Mike Hasselmo, PhD (day job, neuroscientist at Boston University)
Bass Guitar: Earl Miller, PhD (day job, neuroscientist at MIT)
Drums: Brad Dickerson, MD (day job, neurologist at Massachusetts General Hospital)
Presenter Instructions

ALL SPEAKERS (including Plenary and CE Speakers and all presenters in Paper and Symposia Sessions) are required to check-in at the Speaker Ready Room at least ONE HOUR prior to their assigned session.

Speaker Ready Room

The Speaker Ready Room is located in the FALMOUTH ROOM on Level Four.

Paper Session Presenters

All presenters must report to the Speaker Ready Room to upload their presentation no later than one hour prior to their scheduled session.

Paper sessions vary in length and the number of presentations they contain. Depending on your session duration and number of authors, you will have between 10-18 minutes to present your paper, including time for introductions and transitions. A 10- to 15-minute discussion period will occur at the end of each session. Please refer to your original presenter instructions email or consult with the moderator for the specific timing of your session.

Each paper session has a moderator selected from the Program Committee, who will introduce each speaker, help solve any problems, and keep the session on time. Please help the moderator and be respectful of other authors by staying within your allotted time, as each session is under a strict time limitation.

Symposia Presenters

All symposium presenters must report to the Speaker Ready Room to upload their presentation no later than one hour prior to their scheduled session.

Symposia sessions range in length. It is up to the Symposium Chair’s discretion to divide the time amongst the individual abstracts, the discussant, and to allow time for audience discussion and questions. Please stay within the time allotted by the Symposium Chair, as each session is under strict time limits.

Poster Presenters

All poster sessions will take place in the Gloucester Hall on Level Three. Please arrive 10 minutes prior to the start of your session in order to mount your poster.

PLEASE NOTE: If you are presenting in a 9:00 AM session, please report to the poster hall at 8:20 AM to mount your poster for early viewing beginning at 8:30 AM. You do not need to remain with your poster after hanging it, but you must be there for the start of the session at 9:00 AM.

Please refer to the app or the final program in Section II of this book for your final Session Order, and then kindly mount your poster on the blue poster board labeled with the same number.

A volunteer will be available to distribute INS-approved velcro fasteners 10 minutes prior to the start of each poster session. NO other permanent fastening devices are permitted (such as tape, push pins, or staples).

The presenting author must be present at the poster session and should remain with the poster to entertain questions for the duration of the session.

Poster Symposia Presenters

All poster symposia will take place in the Gloucester Hall on Level Three.

Poster symposia occur during regular poster sessions, but are grouped together and positioned in such a way as to provide a cohesive presentation on their selected topic.

Please follow the instructions above for Poster Presenters.
About the INS

The International Neuropsychological Society (INS) is a multidisciplinary, international organization dedicated to enhancing communication among the scientific disciplines that contribute to the understanding of brain-behavior relationships and to promoting the international and interdisciplinary study of these relationships throughout the lifespan. The Society’s emphasis is on science, education, and the applications of scientific knowledge.

Founded in 1967, INS now has more than 4800 members representing more than 60 different countries worldwide.

INS members include cognitive and clinical neuropsychologists and psychologists, neurologists, psychiatrists, speech-language pathologists, and specialists of related disciplines. They include esteemed scientists and clinicians from the world’s most prestigious universities and institutions, private practitioners, and trainees just embarking on their careers.

INS ANNUAL & MID-YEAR MEETINGS

INS holds two meetings per year that provide a venue for cognitive and clinical neuroscientists from around the world to share their research and increase their understanding of the driving forces behind cognition and behavior.

The INS Annual Meeting is held in North America every February and the INS Mid-Year Meeting is held internationally every July. Each meeting offers three to four days of scientific and continuing education programming. Both INS meetings are open to members and non-members, and to professionals and trainees of all levels. Attendees represent neuropsychology and a variety of other disciplines.

NEW MEMBERS WELCOME!

INS welcomes new members! Prospective members may learn more about the Society and complete an online membership application at www.the-ins.org.

WEDNESDAY, FEBRUARY 3, 2016

9:00 AM – 12:00 PM
CE 1. Functional MRI: The History, Basics, Cutting Edge, and Future
Presenter: Peter A. Bandettini
Location: Salon F

CE 2. Science and Practice Considerations for Bilingual Neuropsychology: A Focus on the Hispanic/Latino Community
Presenters: Melissa Lamar, Maria T. Schultheis
Location: Salon G

CE 3. Advancing Developmental Science Through the Application of Pediatric Neuropsychology in Africa
Presenters: Michael J. Boivin, Bruno Giordani
Location: Back Bay (Dartmouth-Fairfield)

12:00 PM – 3:00 PM
INS Student Liaison Committee Workshop
Event: Social Competence in Pediatric Neurological Disease & Injury
Presenters: Keith O. Yeates, Miriam Beauchamp
Location: Salon HJK

1:00 PM – 4:00 PM
CE 4. Characterizing and Guiding Brain Plasticity Across the Lifespan
Presenter: Alvaro Pascual-Leone
Location: Salon F

CE 5. Cognitive Aging in the Digital Era: Role of Global Partnerships
Presenter: Rhoda Au
Location: Salon G

CE 6. Dynamic Considerations in Neuropsychological Assessment of Depressive Disorders: State, Trait, Scar and Burden
Presenter: Scott Langenecker
Location: Back Bay (Dartmouth-Fairfield)

3:00 PM – 4:15 PM
Poster Session 1. Behavioral Neurology, Electrophysiology/EEG, Epilepsy, and Memory
Location: Gloucester Hall

Poster Symposium 1. Predicting Postsurgical Outcome Using Neuroimaging Markers in Temporal Lobe Epilepsy
Organizer: Karol Ospowicz
Location: Gloucester Hall

4:15 PM – 4:30 PM
Program Welcome
Program Committee Chair: Rosemary Fama
Location: Salon ABCDE

4:30 PM – 5:30 PM
Plenary A. The Human Brain Connectome and Cognitive and Affective Function: Normal Individual Variability, Aging, and Neurodegeneration
Presenter: Brad Dickerson
Introduction: Rosemary Fama
Location: Salon ABCDE

5:30 PM – 6:30 PM
Awards Ceremony
Awards Committee Chair: Robert K. Heaton
Location: Salon ABCDE

6:30 PM – 7:30 PM
Welcome Reception
Location: Third Floor Atrium & Lounge

THURSDAY, FEBRUARY 4, 2016

7:20 AM – 8:50 AM
CE 7. Chemical Exposures and the Nervous System: Clinical Findings and Research Evidence
Presenter: Roberta White
Location: Salon F

Presenter: Mark Bondi
Location: Salon G

9:00 AM – 10:30 AM (Posters available at 8:30 AM)
Poster Session 2. ABI (Child), ADHD/Attention, Autism, and Learning Disabilities/Academic Skills
Location: Gloucester Hall

9:15 AM – 10:45 AM
Plenary B. There’s More There: Extracting New Information From the Functional MRI Signal Using Novel Acquisition and Processing Methods
Presenter: Peter A. Bandettini
Introduction: Rosemary Fama
Location: Salon ABCDE

10:45 AM – 11:00 AM
AM Coffee Break
Location: Gloucester Hall

11:00 AM – 12:00 PM
Invited Symposium 1. The Contributions of Neuroimaging to Understanding Autism
Presenters: Deborah Fein – Chair & Discussant, Inge-Marie Eigsti, Vinod Menon, Robert Schultz, Adriana Dimartino
Introduction: Diana Robins
Location: Salon ABCDE

Poster Session 3. Assessment (Adult) and Cognitive Neuroscience
Location: Gloucester Hall

12:45 PM – 2:15 PM
Symposium 1. Malformations of Cortical Development and Cognition
Presenters: Karen Blackmon – Chair, Albert Galaburda, Rod Scott, Brandon Korman, Bernard Chang
Location: Salon ABCDE

Symposium 2. Neuropsychology and Neuroimaging in Alcohol Use Disorders: a Better Understanding for a Better Treatment
Presenters: Anne Lise Pitel – Chair, Pierre Maurage, Hélène Beaufieux, Edith Sullivan, Marsha Bates
Location: Back Bay (Dartmouth-Fairfield)

12:45 PM – 2:15 PM
Invited Symposium 1. The Contributions of Neuroimaging to Understanding Autism
Presenters: Deborah Fein – Chair & Discussant, Inge-Marie Eigsti, Vinod Menon, Robert Schultz, Adriana Dimartino
Introduction: Diana Robins
Location: Salon ABCDE

Poster Session 3. Assessment (Adult) and Cognitive Neuroscience
Location: Gloucester Hall

Symposium 3. Neuropsychology’s Role in Preventing, Understanding, and Treating Alcohol and Marijuana Use in Adolescents and Young Adults
Presenters: Lindsay Squeglia – Chair, L. Bidwell, Joanna Jacobus, Joseph Schacht, Staci Gruber (Discussant)
Location: Salon F

Symposium 4. Chaotic Order, Language Connectivity, and a Generalizing Treatment of Aphasia
Presenters: Stephen Nadeau – Chair, Diane Kendall, Anastasia Bohsali
Location: Back Bay (Dartmouth-Fairfield)
1:00 PM – 2:20 PM
Paper Session 3. Aging
Presenters: Emily Shaw, Kevin Manning, Lassia Bertola, Laura Zahodne
Moderator: Ben Hampstead
Location: Salon G

2:30 PM – 3:30 PM
Plenary C. Modulating Brain Networks to Promote Recovery from Brain Injury
Presenter: Alvaro Pascual-Leone
Introduction: Margaret O’Connor
Location: Salon ABCDE

3:30 PM – 3:45 PM
PM Coffee Break, Sponsored by the Kessler Foundation
Location: Gloucester Hall

3:45 PM – 4:45 PM
INS Arthur Benton (Mid-Career) Award Presentation: The Evolving Role of Neuropsychological Investigations in Multiple Sclerosis
Presenter: Ralph Benedict
Introduction: David Schretlen
Location: Salon HIJK

3:45 PM – 5:05 PM
Invited Symposium 2. Sleep and Cognition
Presenters: Ian Colrain –Chair, Mark Aloia, Donald Bliwise
Introduction: Vicki Anderson
Location: Salon G

Paper Session 4. HIV/AIDS
Presenters: Kathryn Devlin, Laurie Baker, Kaitlin Casaleto, J.Anitha Menon
Moderator: Mike Basso
Location: Salon F

Symposium 5. Genes, Neuropsychology, and Child Psychopathology (*Ends at 5:00 PM)
Presenters: Alysa Doyle –Chair, Erik Willcutt, Christie Burton, Nicoletta Adamo, Larry Seidman (Discussant)
Location: Salon ABCDE

Symposium 6. Elucidating Depressive Symptom, Cognitive, and Affective Dimensions through Integrated Neuropsychological and Cognitive Neurosciences
Presenters: Shawn McClintock –Chair, Vonetta Dotson, Scott Langenecker, Michael Treadway
Location: Back Bay (Dartmouth-Fairfield)

5:15 PM – 6:15 PM
Plenary D (The INS Herbert Birch Memorial Lecture), Adolescence as a Sensitive Period of Social Brain Development
Presenter: Sarah-Jayne Blakemore
Introduction: Ann D. Watts
Location: Salon ABCDE

7:00 PM – 9:00 PM
Student Social, Hosted by the INS Student Liaison Committee
Location: Lil Irish Pub & Restaurant (903 Boylston Street)

FRIDAY, FEBRUARY 5, 2016

7:20 AM – 8:50 AM
CE 9. Cognitive and Behavioral Aspects of Frontotemporal Degeneration
Presenter: Kataria Rascovsky
Location: Salon F

CE 10. Mild Traumatic Brain Injury and the Postconcussive Syndrome: How Does the Science Translate to Clinical Practice?
Presenters: Michael McCrea, Grant L. Iverson
Location: Salon G

9:00 AM – 10:30 AM
(Posters available at 8:30 AM)
Poster Session 5. Cancer, Cross Cultural, Forensic, Malingering/ Effort Testing, and MS/ALS
Location: Gloucester Hall

9:15 AM – 10:45 AM
Paper Session 5. Dementia 1
Presenters: Annie Racine, Kathryn Papp, Caitlin Watson, Timothy Holman, Belinda Yew, Stephanie Schultz, Elizabeth Boots
Moderator: Dorene Rentz
Location: Salon F

Paper Session 6. Medical/ Neurological Disorders, Child
Presenters: Jamie Piercy, Johanna Calderon, Shannon Scratch, Rachel Wasserman, Michelle Fox, Christine Mrakotsky, Christy Casnar
Moderator: Celine Ray-Casserly
Location: Salon G

Symposium 7. Advances in Understanding the Organization and Cognitive/ Behavioral Functions of the Cerebellum
Presenters: Carol Armstrong –Chair, Catherine Limperopoulos, Karin Walsh, Daniel Smith, Mark Mahone (Discussant)
Location: Salon ABCDE

Symposium 8. Deployment Trauma: Insights from the TRACTS Cohort on the Clinical, Cognitive, and Neuoranatomical Effects of Mild TBI and its Comorbidities in OEF/OIF/OND Veterans
Presenters: Catherine Fortier –Chair, Alexandra Kenna, Melissa Amick, Victoria Poole, Benjamin Trotter, Grant L. Iverson (Discussant)
Location: Back Bay (Dartmouth-Fairfield)

10:45 AM – 11:00 AM
AM Coffee Break
Location: Gloucester Hall

11:00 AM – 12:00 PM
Plenary E. The Statistical Crisis in Science
Presenter: Andrew Gelman
Introduction: Harry Miller
Location: Salon ABCDE

12:30 PM – 2:00 PM
Poster Session 6. Aging, MCI, and Visuospatial/Neglect
Location: Gloucester Hall

12:45 PM – 2:15 PM
Invited Symposium 3. Genes, Environments and Their Interplay in Cognitive Aging and Dementia
Presenters: Nancy Pedersen –Chair, William Kremen, Matt McGue, Margaret Gatz, Sudha Seshadri (Discussant)
Introduction: Edith Sullivan
Location: Salon F

Paper Session 7. Imaging and Neuropsychology
Presenters: Tawny Meredith-Duliba, Erin Bigler, Alissa Butts, Arinab Roy, Robert Bilder, Lisanne Jenkins, Alyssa Allion
Moderator: Derin J. Cobia
Location: Salon G

Presenters: Harvey Levin –Chair, Nicholas Ryan, Miriam Beauchamp, Talin Babikian, Brian Bieckman
Location: Salon ABCDE

1:00 PM – 2:20 PM
SLC Panel Discussion Event, Presented by the INS Student Liaison Committee: The Internship & Post-Doctoral Match: An Insider’s Guide for Trainee Success
Presenters: Jeff Baker, Amy Helfelfinger, Kelly Jones, Kristina Patrick
Location: Back Bay (Dartmouth-Fairfield)

Symposium 10. Risk and Protective Factors for Outcomes in MS and Sports-Related mTBI
Presenters: Peter Arnett –Chair, Victoria Merritt, Dede Ukeberua, Jessica Meyer, Margaret Cadden
Location: Salon HIJK

2:15 PM – 3:30 PM
Presenters: Amy Margolis –Chair, Julie Herbstman, Virginia Rauh, Larry Seidman (Discussant)
Location: Salon ABCDE
Neuropsychology: Spanning the World and Disciplines

2:15 PM - 3:45 PM
Poster Session 7. Imaging (Functional & Structural) and Medical/Neurological Disorders (Adult)
Location: Gloucester Hall

2:30 PM - 3:30 PM
INS Early Career Award Presentation: Non-Pharmacologic Treatment of Memory Deficits in Mild Cognitive Impairment
Award Recipient: Ben Hampstead
Location: Salon HUK

Paper Session 8. Executive Functions/Frontal 1
Presenters: Brianne Bettcher, Mario Dulay, Ashley Miller, Jennifer Donelan
Moderator: Kate Possin
Location: Salon F

Presenters: Katherine Bangen, Corinne Pettigrew, David Libon, Brianne Bettcher
Moderator: Jill Razani
Location: Salon G

Paper Session 10. Cancer
Presenters: Yin Ting Cheung, Heather Conklin, Stefanie Vuotto, Adrienne Studaway
Moderator: Kevin Krull
Location: Back Bay (Dartmouth-Fairfield)

3:30 PM - 3:45 PM
PM Coffee Break, Sponsored by Beyond Book Smart
Location: Gloucester Hall

3:45 PM - 4:45 PM
Plenary F. The Development of Executive Functions: Principles and Strategies for Aiding That and Differences by Genotype and Gender
Presenter: Adele Diamond
Introduction: Deborah Fein
Location: Salon ABCDE

5:00 PM - 6:00 PM
Plenary G (The INS Presidential Address). Developing Neuropsychology in Developing Countries: An African Perspective
Presenter: Ann D. Watts, INS President
Introduction: Kathy Y. Haaland
INS Incoming President
Location: Salon ABCDE

6:00 PM - 6:30 PM
Business Meeting
Location: Salon ABCDE

6:30 PM - 7:30 PM
President’s Reception
Location: Third Floor Atrium & Lounge

SATURDAY, FEBRUARY 6, 2016

7:20 AM - 8:50 AM
CE 11. War and the Brain: Neuropsychological Alterations Among Returning Veterans
Presenter: Jennifer J. Vasterling
Location: Salon F

CE 12. Introduction to Ethics in the Mind-and Neuro-Sciences (Neuroethics)
Presenter: Eric Racine
Location: Salon G

9:00 AM - 10:30 AM
(Posters available at 8:30 AM)

Poster Session 8. Cognitive Intervention/Rehabilitation, Dementia, and Drugs
Location: Gloucester Hall

Poster Symposium 2. Neuropsychological Assessment & Rehabilitation From Literates to Illiterates: An Indian Perspective
Organizer: Ashima Nehra
Location: Gloucester Hall

Presenters: John DeLuca–Chair, Nancy D. Charavallotti, Natalia Ojeda, Matcheri S Keshavan, Erin Bigler (Discussant)
Introduction: Mike Basso
Location: Salon ABCDE

Paper Session 11. Pediatric Neuropsychology
Moderator: Mary Best
Location: Salon G

Symposium 12. Health Factors Related to Cognitive and Neural Plasticity
Presenters: Elizabeth Lertz–Chair, Andreana Haley, Scott Hayes, Michelle Voss, David Salat, William Milberg (Discussant)
Location: Salon F

Symposium 13. Risk Factors in the Development of Executive Functioning in Children
Presenters: Rachel Weber–Chair, Susanne Duval, Theresa Lafavor
Location: Back Bay (Dartmouth-Fairfield)

10:45 AM - 12:15 PM

Paper Session 12. Executive Functions/Frontal 2
Presenters: Paul Cirino, Kelly Jones, Peter Isquith
Moderator: Stuart Hall
Location: Salon ABCDE

Paper Session 13. Acquired Brain Injury (ABI), Child
Presenters: Jessica Faber, Elisabeth Wilde, Ilirjana Hyseni, Ashley Ware, Soheil Afshar, Chelsea Morse, Sharon Nichols
Moderator: To Be Announced
Location: Salon G

Symposium 14. Driving is More Than Cognition: Integrating Evidence Across Neuropsychological Populations
Presenters: Maria Schultheis–Chair, Kristina Patrick, Anna Graefe, Ann-Marie Raphael, Elizabeth Whipple
Location: Salon F

Symposium 15. Resilience to Brain Aging and Alzheimer’s Disease: Evidence From Imaging and Biomarker Studies
Presenters: Ozioma Okonkwo–Chair, Prashanthi Vemuri, Anja Soldan, Dorene Rentz, Stephanie Schultz, Sylvie Belleville
Location: Back Bay (Dartmouth-Fairfield)

12:45 PM - 2:00 PM
Poster Session 10. ABI (Adult) and Language/Speech
Location: Gloucester Hall

1:00 PM - 2:30 PM
Paper Session 14. Dementia 2
Presenters: Anna Blanken, Jason Hassenstab, Mehir Trivedi, Alexandra Minor, Neellesh Nadkarni, Benjamin Coleman, Angela Jefferson
Moderator: Maxine Krengel
Location: Salon G

Presenters: Brian Willoughby–Chair, Drew Coman, Jill Pineda, Kimberly Dooley
Location: Salon ABCDE

Symposium 17. Predictors and Outcomes of Pediatric Concussion: Insights from the Prospective, Multicenter 5P Project
Presenters: Miriam Beauchamp–Chair, Brian Brooks, Michelle Keightley, Keith Yeates
Location: Salon F
44th Annual Meeting Sponsors

The International Neuropsychological Society wishes to thank its generous sponsors for their support of the INS 44th Annual Meeting. Through their sponsorship, these organizations make a valuable contribution to the success of the INS Annual Meeting and towards achieving INS goals of further enhancing global-scale communication and collaboration between disciplines. This year’s Supporting Sponsors are helping to provide the afternoon coffee breaks on Thursday and Friday. Please join us in the Gloucester Hall from 3:30 to 3:45 PM on Thursday and Friday and enjoy a hot beverage courtesy of our gracious sponsors!

Supporting Sponsors

Representatives of Beyond BookSmart look forward to meeting INS attendees at the Friday Afternoon Coffee Break, or at their Exhibit Booth in the Gloucester Hall (Booth #1).

3:30-3:45 PM
Friday PM Coffee Break
Sponsored by Beyond BookSmart
Gloucester Hall

Beyond BookSmart

Gloucester Exhibit Hall

All Annual Meeting attendees are invited to stroll through the INS Exhibit Hall, located in the Gloucester Hall on Level Three, during open hours posted below. Take advantage of discount prices on many journals, books, testing materials, and more, offered especially by our exhibitors for registered INS meeting attendees.

Exhibit Hall Hours:
- Wednesday, February 3: 3:00 PM–6:00 PM
- Thursday, February 4: 8:15 AM–6:00 PM
- Friday, February 5: 8:15 AM–6:00 PM
- Saturday, February 6: 8:15 AM–2:00 PM

INS Awards Program

The International Neuropsychological Society’s Awards Program is intended to recognize the many achievements of accomplished INS members.

Awards Ceremony

Please join us in support of your deserving colleagues at the INS Awards Ceremony on Wednesday, February 3rd at 5:30 PM in Salon ABCDE, where we will honor the recipients of this year’s awards.

About the INS Awards Program

Major INS Awards

Major INS Awards are given in recognition of scientific achievement in Early Career, Mid-Career (the Arthur Benton Award), or for a Lifetime of Achievement in research, education or service in the field of neuropsychology. The INS Distinguished Career Award may be given to recognize those individuals who have enjoyed extended careers and who have made major, sustained contributions to the field of neuropsychology and the Society. The Paul Satz-INS Career Mentoring Award, given in honor of Dr. Paul Satz and sponsored by PAR, Inc., is given to recognize mentoring and teaching activities that have profoundly impacted the careers of students in the field of neuropsychology.

INS Program Awards

INS Program Awards are selected by the Program Committee for each INS Meeting in recognition of the Meeting’s most outstanding scientific contributions. For the Annual Meeting, program awards include the Nelson Butters Award for the most outstanding submission by a postdoctoral fellow, the Phillip M. Rennick Award for most outstanding submission by a graduate student, and the Laird S. Cermak Award for the best submission in the field of memory or memory disorders. In conjunction with the INS Program and Awards Committees, the INS Student Liaison Committee recognizes an additional five students for their meritorious abstract submissions at each INS meeting through the selection of the SLC Student Research Awards.

Nominations & Eligibility for the INS Awards Program

To inquire about award nominations, please visit the-ins.org/ins-awards, or email INS@utah.edu.

NOMINATIONS FOR MAJOR INS AWARDS

The INS Awards Committee accepts nominations annually from INS members for major INS Awards, including Career or Lifetime Awards, and the Paul Satz-INS Career Mentoring Award. Nominations are welcome at any time, but must be submitted by certain dates in order to be considered for an award at specific upcoming meetings. Winners are selected by the Awards Committee, according to posted criteria, with approval from the INS Governing Board.

ELIGIBILITY FOR INS PROGRAM AWARDS

All abstracts that are submitted to the Annual and Mid-Year Meetings are screened and considered for eligible Program Awards.

INS Awards Committee

The INS Awards Committee was created to recommend current and past members to the Board of Governors for the purpose of recognition of outstanding achievement in areas related to Neuropsychology.

Robert K. Heaton, a past president of INS (2003-2006), has served as the Chair of the INS Awards Committee since 2008.

Previous INS Award Winners

Please visit the INS website for complete descriptions of each INS award and to view previous award winners: www.the-ins.org/ins-awards
Paul Satz-INS Career Mentoring Award
Sponsored by Psychological Assessment Resources, Inc.

The Paul Satz-INS Career Mentoring Award:
Igor Grant, MD, FRCP(C)

He has contributed to approximately 700 scholarly publications and is principal investigator of several NIH studies, including a NIDA P50 (Translational Methamphetamine AIDS Research Center – TMARC), and is co-director of the HIV Neurobehavioral Research Center (HNRC).

In addition to his research publication, Dr. Grant has contributed to the discipline of neuropsychology by co-editing several books, including the well-received work Neuropsychological Assessment of Neuropsychiatric and Neuromedical Disorders with his colleague Ken Adams. He was the founding editor and chief editor for 10 years of the Journal of the International Neuropsychological Society. Dr. Grant also was co-founding editor of the journal AIDS and Behavior, part of whose focus is on neuropsychological and other behavioral factors in HIV/AIDS. Dr. Grant’s contribution to the INS has included a long record of service such as chairing the Site Selection Committee, the Publications Committee, serving on the INS Governing Board, and as President of the INS in 2007-2008. In his role as educator, Dr. Grant has chaired Ph.D. dissertation committees of 22 students. Dr. Grant is proud that a number of his students have gone on to distinguished and productive careers in their own rights at various universities and also have become highly contributing members to the INS.
Mid- and Early Career Awards

The Arthur Benton Award for Mid-Career Research: Ralph H.B. Benedict

INS Arthur Benton (Mid-Career) Award Presentation: The Evolving Role of Neuropsychological Investigations in Multiple Sclerosis
Thursday, February 4th 3:45 to 4:45 PM

Abstract

Memory deficits characterize Alzheimer’s disease and its clinical precursor amnestic mild cognitive impairment (aMCI). While a growing body of research furthers our understanding of the detection, characterization, and neuroanatomy of these memory deficits, the clinical translation of these findings has lagged. So, providers continue to be faced with the critical question of “What can I do about it?” Treatment is typically limited to a handful of medications that are, at best, marginally successful. This limitation has fostered a growing interest in non-pharmacologic treatment methods for minimizing learning and memory deficits, approaches that include cognitive training and cognitive rehabilitation. These techniques hold promise but remain poorly (or mis-)understood. In this session, I will first discuss several key methodological issues that plague cognitive training (CT) and cognitive rehabilitation (CR). I will then use a hierarchical model to evaluate whether common techniques used in CT and CR (e.g., spaced retrieval, mnemonic strategies) are beneficial for teaching specific content versus enhancing a general cognitive process. Finally, I will discuss the use of non-invasive electrical brain stimulation as another promising treatment approach that may enhance cognition directly or indirectly via interactions with cognitive intervention. Examples from ecologically-relevant memory paradigms that we have developed will be included throughout and functional magnetic resonance imaging (fMRI) evidence of technique-dependent change will be used to discuss possible mechanisms of action. Patient-specific predictors, such as neuropsychological performances and brain volumes, will be integrated since these factors are vital for selecting techniques that are most beneficial at the individual patient level.

The INS Award for Early Career Research: Benjamin M. Hampstead

INS Early Career Award Presentation: Non-Pharmacologic Treatment of Memory Deficits in Mild Cognitive Impairment
Friday, February 5th 2:30 to 3:30 PM Salon HIJK

Abstract

Multiple sclerosis (MS) is a demyelinating disease of the central nervous system characterized by relapses and gradual worsening of chronic neurological disability. Charcot described cognitive and personality changes in MS patients in 1877, but it would take a century for the quality and frequency of such impairment to be elucidated by Rao and others. Cognitive impairment occurs in 50-60% of MS patients, and dementia in roughly 15%. While the demyelinating WM lesion is the pathologic hallmark of MS, neuropsychological deficits are more robustly correlated with brain atrophy. This presentation will describe MRI research showing strong correlation between neuropsychological deficits and ventricle volume, normalized gray matter (GM) volume, deep GM structures such as the thalamus, and most recently networks involving the anterior regions of the thalamus. In all cases, neuropsychological tests emphasizing visual processing speed were most sensitive, and closely tied to MRI measures. In addition to characterizing MS dementia, neuropsychological investigations are playing an ever increasing role in the clinical management of this disease. Large neuropsychological batteries were distilled to core tests useful for screening and disease monitoring. Reversible cognitive deficits were recently captured during relapses, broadening the construct of MS disease activity. Based on this and related work, the FDA and EMA now recognize cognitive dysfunction as a core feature of neurological status in MS, making it a central target of clinical trials. The presentation will also cover clinical trials where disease-modifying therapy has shown impact on cognitive status.
Distinguished Career Awards

Kenneth M. Adams

Kenneth M. Adams graduated with his Bachelor of Science from Wayne State University with a major in psychology and a minor in mathematics. He was drawn to the world of neuropsychology during his undergraduate career via laboratory experiences in psychophysiology, followed by exposure to the clinical use of integration of clinical psychology and brain research in a hospital setting. Realizing the potential applications of neuropsychological concepts and techniques, he applied and was admitted to Wayne State University's clinical psychology PhD program. His research as a student, under the guidance of Melvin Schwartz, Phillip Rennick and Gerald Rosenbaum, was reflective of pioneer efforts in the field with regard to psychometric understanding of neuropsychological assessment. Ken completed his internship at the Lafayette Clinic in Detroit, and has held numerous positions since then including co-coordinator of the Neuropsychology Laboratory at Hamilton Psychiatric Hospital, Hamilton, ON; neuropsychologist, Chief Psychologist and Division Head in the Department of Psychiatry at the University of Michigan Medical School, and in the Department of Psychiatry at Henry Ford Hospital in Detroit; Director of Psychology in Psychiatry at the University of Michigan School of Medicine; and Chief Psychologist and Associate Chief for Educational Programs in the Mental Health Service at the VA Ann Arbor Healthcare System. His academic appointments include Professor of Psychology in the University of Michigan School of Literature, Science and the Arts, and in the Department of Psychiatry at the University of Michigan Medical School, and Adjunct Professor within the Departments of Psychology at Michigan State University, Wayne State University, University of Windsor University of Detroit and McMaster University. He received his Diplomate in both Clinical Psychology and Clinical Neuropsychology from the American Board of Professional Psychology. Dr. Adams' contributions to the field of neuropsychology have been numerous and significant, with regard to production and dissemination of research in neuropsychology, service to and guidance of our organizations, and promotion of excellence in clinical training. Ken was the founding co-editor of *The Clinical Neuropsychologist* and has been on the editorial boards of *Aging and Cognition*, *Archives of Clinical Neuropsychology*, *Assessment*, *Journal of Clinical and Experimental Neuropsychology*, *Journal of Consulting and Clinical Psychology*, *Professional Psychology*, *Psychological Assessment*, *Psychology and Aging*, *Neuropsychology*, *Neuropsychology Review*, and *The Clinical Neuropsychologist*, taking additional editorial peer review roles for 38 other journals. He has served on numerous Federal Research Service Study Sections, Merit Review Boards and Steering Committees and has participated in multiple national collaborative studies as site co-investigator or consultant.

Ken has served as co-editor of several seminal books in the field of clinical neuropsychology, most notably *Neuropsychological Assessment of Neuropsychiatric and Neuromedical Disorders and Methods in Clinical Neuropsychology*. He has authored or co-authored 27 book chapters and 157 journal articles and book reviews. His collaborations within multicenter research projects have focused on the advancement of multivariate statistical methodology with neuropsychological measurement methods and non-cerebral causes of poor neuropsychological performance, contributions that remain central to practice in our field. Ken's service to U.S. national organizations has been laudable. Within the American Psychological Association, Ken has served as Member at large, Secretary and President of Division 40 and Chairman of the Division 40 Ethics Committee as well as serving on the Committee on Accreditation, the Commission on Accreditation Appeals Board, the Council of Representatives, and the Executive Roundtable of Practice Divisions. Within the American Board of Clinical Neuropsychology of the American Board of Professional Psychology, Ken has served as a Board Examiner, Board Member at Large, Treasurer, and a member of the By-Laws Committee. He has also served in leadership roles for the Association of Psychology Postdoctoral and Internship Centers, Association of VA Psychologist Leaders, the Michigan Psychology Association, and United States Department of Veteran's Affairs. Within the INS, Ken has served as a member and chair of the Scientific Program Committee and member of the Governing Board. He also served as Executive Secretary and President of INS, playing a vital role in the synthesis and trajectory of the field of neuropsychology internationally, as well as the welfare the progress of the society, at a time when the field was burgeoning rapidly.

One of Ken’s greatest areas of contribution has been as developer and operator of professional training programs, including the Hamilton Psychiatric Hospital training program in Hamilton, ON, the APA-accredited clinical psychology internship program at Henry Ford Hospital, and teaming up with faculty to launch the APA-accredited University of Michigan/VA Ann Arbor Medical Center post-doctoral consortium program. He has supervised 210 interns and several dozen post-doctoral fellows, thus contributing his knowledge and expertise to those who will bring the knowledge and application of neuropsychology into the future.

Neuropsychology is a field at the nexus of medicine, psychology and neuroscience that calls for integration and application of complex ideas. Ken's contributions have demonstrated the epitone of understanding of neuropsychological constructs from a research perspective, and the ability to apply conceptualizations of these concepts to neurological, psychiatric and general medical patients. His penchant for allusion, catechesis and other esoteric figures of speech not withstanding, Ken’s written contributions, both formal and informal, and his supervisory contributions, continue to bring knowledge, perspective and humor to our field on a regular basis.

Diane Howieson

Diane Howieson is an Associate Professor Emerita of Neurology at the Oregon Health & Science University, where she was a clinician and investigator in the Layton Aging and Alzheimer’s Research Center. Her principle research areas were aging and dementia. She was Head of the Neuropsychology Division at the Portland VA Medical Center for many years where she trained predoctoral and postdoctoral students. She is a co-author with Muriel Lezak, Erin Bigler, and Daniel Tranel on the fifth edition of *Neuropsychological Assessment*. She has served as Consulting Editor for *The Journal of the International Neuropsychological Society* and *The Clinical Neuropsychologist* and is on the Editorial Board of *Cognitive and Behavioral Neurology*. She was Program Chair of the 1994 North American INS meeting and served on the Program Committee for the 2001 North American INS meeting. She served on the Awards Committee of the American Psychological Association Division 40 (Neuropsychology) and served as its Chair. She also served on the Examination Committee of the Association of State and Provincial Psychology Boards.
Linas A. Bieliauskas is a Distinguished Career Award recipient for his significant contributions to the field of clinical neuropsychology. He has been a member of the American Board of Clinical Neuropsychology (ABCN) and American Academy of Clinical Neuropsychology (AACN) since 1980. Bieliauskas has served on multiple committees and helped shape the practice of clinical neuropsychology as a profession in North America and internationally. His work on diversity assessment, recognition for his service to the profession, and contributions to the development of neuropsychology as a professional discipline have been instrumental. He continues to serve on the Board of Directors of the American Board of Clinical Neuropsychology (ABCN) and has been an Examiner for Board Certification in neuropsychology and clinical psychology. His service has advanced neuropsychology as a science and a professional discipline.

Russell L. Adams serves on the Board of Directors of the American Board of Clinical Neuropsychology (ABCN) and has been an Examiner for Board Certification in neuropsychology and clinical psychology. He is a past president of the International Neuropsychological Society and has served on the editorial boards of leading journals in the field. Adams has also been an ad hoc reviewer for journals in psychology, neuropsychology, and medicine. His work has contributed to the development of neuropsychology as a subspecialty area of practice and he has worked tirelessly for over 3 decades to advance professional psychology. He is a member of the National Academy of Neuropsychology.
Nelson Butters Award for best submission by a postdoctoral fellow

EMILY C. EDMONDS, University of California San Diego

Objective: Previous research has demonstrated heterogeneity in neuropsychological performance and biomarker profiles within MCI samples. We previously identified four empirically-derived MCI subtypes within the Alzheimer’s Disease Neuroimaging Initiative (ADNI) MCI cohort: amnestic MCI, dynamic MCI, dysexecutive/mixed MCI, and a large cluster-derived normal group (34%) that was characterized by intact neuropsychological performance (despite their MCI diagnosis). The current study investigated cortical thickness profiles in these four cognitive subtypes.

Participants and Methods: Cortical thickness estimates for 663 ADNI participants (485 MCI and 178 normal controls) were computed for 32 regions of interest per hemisphere. Statistical group maps compared each subtype to normal control participants.

Results: A unique pattern of cortical thinning was observed for each MCI subtype, which corresponded to their profile of cognitive dysfunction. Consistent with their isolated deficit in memory, the amnestic MCI group showed thinning in medial temporal lobe regions bilaterally. The dynamic MCI group demonstrated lateral temporal lobe atrophy with greater involvement of the left hemisphere consistent with their naming deficit. The dysexecutive/mixed MCI group exhibited a fairly widespread pattern of atrophy, which reflects their neuropsychological profile, which was characterized by poor performance across multiple cognitive domains. No differences were found between the cluster-derived normal subtype and the normal control group.

Conclusions: There is substantial variability in cortical atrophy patterns among patients with MCI that underlie their distinct cognitive profiles. This heterogeneity is not captured when patients are grouped by conventional diagnostic criteria. Findings further validate our empirically-derived MCI subtypes and offer support for the premise that the conventional diagnostic criteria for MCI are highly susceptible to false-positive diagnostic errors.
SLC Student Research Awards

The INS Student Liaison Committee (SLC), in conjunction with the INS Boston Program Committee, recognizes the following five students as well-deserving recipients of the **SLC Student Research Award**.

The American Board of Professional Neuropsychology (ABN) has been granting board certification in clinical neuropsychology since 1982. ABN encourages the pursuit of excellence in the practice of clinical neuropsychology by offering a credentialing process, and it also offers consumers and the healthcare community a means of identifying well-qualified clinical neuropsychologists.

ABN has recently developed a new Post-Doctoral Training Recognition Program, the Academy of the American Board of Professional Neuropsychology (AABN^SM).

AABN^SM is designed to recognize programs that offer the equivalent of a 2 year post-doctoral fellowship program, in a flexible manner, even in sites where there are 2 supervisors (one of whom must be board certified in neuropsychology).

AABN^SM provides a consortium approach to training. Recognized programs have access to a large cache of didactic materials and information that augments the post-doctoral training experience. Thus, even a fellowship in a private practice, or other small setting can provide didactic training structured to follow Houston Conference Guidelines requirements.

Additionally, access to AABN^SM’s archives of didactic materials as well as assistance with the evaluation and monitoring of the progress of fellows throughout the program is provided by AABN^SM. Upon exiting an AABN^SM recognized fellowship, individuals will be immediately eligible to apply for neuropsychology board certification.

AABN^SM programs are currently recruiting fellows. Moreover, AABN^SM is recruiting new training sites. For a list of recognized AABN^SM sites, information on how to apply for a fellowship at an AABN^SM site, or information regarding how a site may become recognized by AABN^SM, go to:

www.aabnonline.com

or email the committee chair, Dr. Paula Cooper, at paulacooperphd@gmail.com
Plenary Addresses

Wednesday February 3, 4:30-5:30 PM

GRAND BALLROOM, SALON ABCDE

BRAD DICKERSON, MD  
Associate Professor of Neurology, Harvard Medical School  
Director, Frontotemporal Dementia Unit, Massachusetts General Hospital  
Boston, Massachusetts, USA

Abstract
Modern neuroimaging techniques are providing revolutionary insights into the human brain connectome. We are now able to study—in living people—large-scale brain networks predicted from non-human primate tract tracing investigations and lesion neuropsychology. I will review knowledge of the localization and function of brain networks in the healthy brain, and evidence that measures of these networks illuminate individual differences in cognition, affect, and sensorimotor function. The modulation of network connectivity in relation to task performance, pharmacologic manipulation, or brain stimulation is providing new insights into neuroplasticity. Age-related cognitive decline may be explained in part by a "compromised connectome"; older adults lucky enough to be "superagers"—with youthful cognitive function—have preserved anatomy in key nodes of large-scale cognitive-affective brain networks. Patients with neurodegenerative diseases develop disconnection, dysfunction, and atrophy within brain networks subserving cognitive, affective, and sensorimotor function related to symptoms of their illness. Neurodegenerative diseases appear to progress in part by following the pathways of the brain's connectome.

Thursday February 4, 11:00 AM-12:00 PM

Plenary Session B: There's More There: Extracting New Information From the Functional MRI signal Using Novel Acquisition and Processing Methods

GRAND BALLROOM, SALON ABCDE

PETER A. BANDETTINI, PHD  
Chief, Section on Functional Imaging Methods, Laboratory of Brain and Cognition, Intramural Research Program;  
Director, Functional MRI Core Facility;  
National Institute of Mental Health, National Institutes of Health (NIH)  
Bethesda, Maryland, USA

Abstract
Our group has been focusing for the past several years on developing methods for detecting and characterizing ever more subtle and elusive fMRI changes in task-based and resting-state fMRI. Using methods that incorporate novel acquisition methods, novel activation paradigms, and novel post-processing methods, we have generated some surprising findings. In this lecture, I will be discussing three primary approaches and findings. The first will be our approach to reducing artifactual time series noise and artifactual fluctuations. This approach involves the use of a multi-echo echo planar imaging (ME-EPI) acquisition. The principle we use is that blood oxygen level dependent (BOLD) shows echo time dependence while noise and artifact does not. Using this basic principle we are able to identify and remove non-BOLD signal changes. The second approach is massive averaging (9 hours of scanning) of a single subject’s activation data and perform model-free analysis to determine that, in fact, all gray matter is active with even a simple task. Lastly, our third approach is to use windowed correlation analysis on time series to determine what ongoing task each subject is performing. This dynamic connectivity-based brain reading demonstrated to be more sensitive than magnitude assessment in determining ongoing tasks, and the informative connections extend well outside of the regions shown to change in magnitude with the task.

Thursday February 4, 2:30-3:30 PM

Plenary Session C: Modulating Brain Networks to Promote Recovery from Brain Injury

GRAND BALLROOM, SALON ABCDE

ALVARO PASCUAL-LEONE, MD, PHD  
Professor of Neurology and Associate Dean for Clinical and Translational Research;  
Chief, Division of Cognitive Neurology;  
Director, Berenson-Allen Center for Noninvasive Brain Stimulation;  
Harvard Medical School and Beth Israel Deaconess Medical Center  
Boston, Massachusetts, USA

Abstract
Following a brain insult (e.g. following a stroke or traumatic brain injury), or as a consequence of the alteration of function in a specific brain region (for example due to a sustained change in afferent input or efferent demand), the affected neural network adapts fluidly. This neural plasticity can confer no perceptible change in the behavioral output of the brain, lead to changes demonstrated only under special testing conditions, or cause behavioral changes that may constitute symptoms of disease or represent paradoxical functional facilitations. Conseuence such a formulation is the notion that the manifestations of focal brain dysfunction are ultimately defined by brain plasticity. Thus, disability after a brain insult, is the consequence of plasticity, just as through plasticity it might be possible to recover from the functional consequences of a brain insult.

The challenge in interventional cognitive neuroscience and rehabilitation is to guide the plastic changes across the lifespan, or following a brain insult, in order to promote the best functional outcome for a given individual. This requires modulation of neural networks. The challenge is to learn enough about the mechanisms of plasticity and the nature of dynamics of neural networks to be able to suppress changes that may lead to undesirable behaviors while accelerating or enhancing those that result in a behavioral benefit for the patient. Neurostimulation, including non-invasive brain stimulation techniques, provide an opportunity to modulate plastic brain networks in a controlled and specific manner, and a growing body of evidence supports its utility in promoting recovery of function after a brain injury.
Abstract

The brain has evolved to understand and interact with other people. This talk focuses on how the social brain, that is the network of brain regions involved in understanding others, develops during adolescence. Adolescence is a time characterised by change - hormonally, physically, psychologically and socially. Social cognitive processes involved in navigating an increasingly complex social world continue to develop throughout human adolescence. Areas of the social brain undergo significant reorganisation in terms of structure and function during the second decade of life, which possibly reflects a sensitive period for adapting to the social environment. The changes in social environment that occur during adolescence might interact with increasing executive functions, heightened social sensitivity and the developing social brain to influence a number of adolescent behaviours, including risk-taking, peer influence and self-consciousness. I will discuss the importance of taking into account the social environment and the social brain when considering adolescent-typical behaviour.

Friday February 5, 3:45-4:45 PM

Plenary Session F: The Development of Executive Functions: Principles and Strategies for Aiding That and Differences by Genotype and Gender

GRAND BALLROOM, SALON ABCDE

ADELE DIAMOND, PHD
Canada Research Chair Tier 1 Professor of Developmental Cognitive Neuroscience; Head, Division of Developmental Cognitive Neuroscience, Department of Psychiatry; Associate Member, Department of Psychology; University of British Columbia, Vancouver, British Columbia, Canada

Abstract

Among the most important abilities children can develop are the "executive functions" (EFs). EFs consist of 3 core skills: inhibitory control (e.g., resisting one's first impulse and giving a wiser, more considered response; staying focused and persevering), working memory (e.g., mentally working with and relating facts and ideas), and cognitive flexibility (e.g., thinking outside the box; looking at familiar problems in new ways; flexibly adjusting to changed demands or priorities). These are critical for reasoning, creative problem-solving, self-control, and success in all life's aspects. They are often more predictive than IQ or SES. Executive functions depend on prefrontal cortex (PFC) and interrelated brain regions. Unusual properties of PFC make it vulnerable to environmental and genetic variations that have little effect anywhere else in the brain. This has implications for how best to treat different types of ADHD, why the brightest people sometimes have the most fragile personalities especially when stressed, and why the Yerkes-Dodson curve (that cognitive performance is better when one is a bit aroused than calm) does not seem to apply to females. EFs can be improved even in the very young by exercising and challenging them, much as physical exercise tones our bodies. I will walk through some ways to aid EF development. A few widely-held beliefs will be de-bunked: Aerobic exercise (by itself) does not improve EFs (or memory). Transfer is not wide; people only improve on what they practice. I will also present the data that have led me to predict that the activities that most successfully improve EFs will be found to be those that not only directly train and challenge diverse EF skills but also indirectly support EFs by addressing emotional, social, and physical needs.

Friday February 5, 11:00 AM-12:00 PM

Plenary Session G—The INS Presidential Address: Developing Neuropsychology in Developing Countries: An African Perspective

GRAND BALLROOM, SALON ABCDE

ANN D. WATTS, PHD
Clinical Psychologist, Medical Centre West, Entabeni Hospital
Durban, South Africa
Part-time Lecturer, University of KwaZulu-Natal
Visiting Lecturer, University of Zululand

Abstract

More than 80% of the world's population live in the less developed countries (World Bank, 2014), where neurological, mental health, developmental and substance use (NMDS) disorders are highly prevalent. This cluster of disorders represents a growing public health problem especially in these under resourced and less developed countries where the treatment gap and contribution to the burden of disease is disproportionately large. This underscores the need for neuropsychological research, education, training and services in these regions of the world. However, the relevance of neuropsychology, with its Western roots, in these countries is not immediately apparent to policy makers who frequently do not understand the complex impacts of NMDS disorders on population health and economic growth. Instead their focus is on preventing or containing the poverty and food insecurity which are prioritized as primary threats to development.

This presentation will address critical priorities and challenges related to establishing and growing neuropsychology within this context. In doing so an African perspective will be used to illustrate evolving issues, including relevance and elitism, the use of assessment and therapeutic techniques within the context of multicultural diversity, and human rights and policy imperatives.
Invited Symposia

Thursday February 4, 12:45-2:15 PM

Invited Symposium 1: The Contributions of Neuroimaging to Understanding Autism

CHAIR & DISCUSSANT: DEBORAH FEIN

PRESENTERS: INGE-MARIE EIGSTI, VINOD MENON, ROBERT SCHULTZ, ADRIANA DIMARTINO

SALON ABCDE

Chair’s Biography

Deborah Fein is a clinical neuropsychologist who has been doing autism research since the late 1970’s. She is currently Board of Trustees Distinguished Professor in the Departments of Psychology and Pediatrics at the University of Connecticut. She has investigated numerous areas in autism, including neuroimaging, biochemical abnormalities, language and memory, sensory abnormalities, outcome, early detection, and screening. She is the author or editor of “The Neuropsychology of Autism”, “Autism in Your Classroom”, and the widely used screening tool, “Modified Checklist for Autism in Toddlers (MCHAT)” and has a forthcoming book with Guilford on activities for parents of toddlers at risk to do with their children. She has also authored over 150 articles on autism. She was Secretary of the International Society for Autism Research and was the Intellectual and Behavior Assessment topic chair for this year’s International Meeting for Autism Research.

Symposium Summary

Dr. Schultz is a member of the Infant Brain Imaging Study group, and will present up-to-date results from infant brain imaging. Such structural imaging data from a period of development when symptoms are not yet apparent or are not yet fully developed can shed crucial light on the causes of deviations from typical social and cognitive development. Dr. Di Martino will present functional brain imaging results from prekindergarten age children, imaged during sleep. These data shed light on the organization of functional networks in early childhood and their relationships with symptomatology. Dr. Menon will present results on whole brain intrinsic functional connectivity in ASD in later childhood; results suggest that hyperconnectivity within the several large-scale networks, and especially the salience network, can correctly classify autism cases. This network participates in attention allocation to salient stimuli and may contribute to diminished interest in social interaction. Dr. Eigsti will present data on activation of different brain areas during language processing in adolescents with high-functioning autism and those who have moved off the autism spectrum, to explore the mechanisms of this ‘optimal outcome’. Dr. Fein will present a brief discussion, considering the developmental implications of the 4 papers from infancy through adolescence, and consider ways to characterize the phenotype that may be crucial for integrating findings from disparate samples.

Symposium Abstracts

1. FEIN, D The Contributions of Neuroimaging to Understanding Autism
2. SCHULTZ, R MRI Findings from the Collaborative Infant Brain Imaging Study (IBIS)
3. DIMARTINO, A An Emerging Paradigm for Examination of Autism in Early Brain Development
4. MENON, V Functional and Structural Brain Organization in Autism: Linking Physiology and Behavior
5. EIGSTI, J Functional Brain Activation During Language Comprehension in Youth with Verbal Autism Spectrum Disorder (ASD), Typical Development, and Optimal Outcomes from ASD

Thursday February 4, 3:45-5:05 PM

Invited Symposium 2: Sleep and Cognition

CHAIR: IAN M. COLRAIN

PRESENTERS: MARK S. ALOIA, DONALD L BLIWISE, IAN M. COLRAIN

SALON G

Chair’s Biography

Dr. Ian Colrain is the Executive Director of Brain Sciences research at SRI International. He also holds an appointment as a Professorial Fellow in Psychology at The University of Melbourne. He received a Ph.D. in Sleep Physiology from the University of Tasmania where he also completed a B.Sc. Honors degree in Computer Science and Psychology. Following a post-doctoral fellowship in Anatomy, he held academic appointments in Neuroscience at the University of Auckland in New Zealand and the University of Melbourne. Prior to founding the sleep program at SRI he was the Senior Clinical Research Scientist at the Stanford Sleep Disorders Clinic. He is the author of over 250 scientific papers chapters and presentations, is an associate editor for the journals SLEEP and Frontiers in Respiratory Physiology, and is an active member of the Academy of Sleep Medicine and the Sleep Research Society. He has been funded to conduct sleep studies on children adolescents and adults by the National Institute on Alcohol Abuse and Alcoholism, the National Institute on Drug Abuse and the National Heart Lung and Blood Institute of the NIH, and works with early stage medical device companies to develop new treatments for sleep disorders.

Symposium Summary

Sleep is a fundamental behavior that supports physical, mental and emotional health and facilitates neuropsychological functioning in humans of all ages. While the fundamental question of why sleep is needed remains largely unanswered, it is clear, that insufficient sleep, disrupted sleep or poorly timed sleep can be extremely disruptive to human health and lead to diminished cognitive capability. Both sleep and cognitive function vary systematically across the lifespan, and interrelationships are clearly complex and may be very different at different points in the normal developmental trajectory. For example, decreases in slow wave sleep and its associated delta EEG power may be associated with decreased cognitive function in older adults, but even more dramatic decreases in delta power across adolescence are typically occurring at a time when cognitive function is improving. As has historically been the case in neuropsychology, the role of sleep in supporting cognitive function can be informed by the examination of pathology. In this symposium three areas of disease known to be associated with sleep disruption will be presented in the context of normal age-related changes in both sleep and cognitive function. Dr. Bliwise will discuss the role of sleep in supporting cognitive function normal aging and relations between sleep and cognitive decline in dementia. Dr. Aloiia with discuss interrelationships between Obstructive Sleep Apnea, brain structure and cognitive function and the role of CPAP therapy in restoring brain and cognitive health. Finally, Dr. Colrain will discuss the role of sleep and sleep EEG changes in brain and cognitive changes associated with Alcohol Use Disorder.

Symposium Abstracts

1. COLRAIN, IM Sleep and Cognition
2. BLIWISE, DL Cognition and Sleep in Normal and Pathological Aging
3. ALOIA, MS Neuropsychological Consequences of Obstructive Sleep Apnea
4. COLRAIN, IM Alcoholism: Sleep, Brain and Cognitive Consequences
Friday February 5, 12:45-2:15 PM

Invited Symposium 3: Genes, Environments and Their Interplay in Cognitive Aging and Dementia

Chair: Nancy Pedersen
Presenters: William Kremen, Matt McGue, Margaret Gatz, Nancy Pedersen
Discussant: Sudha Seshadri

Symposium Abstracts
1. PEDERSEN, N Genes, Environments and Their Interplay in Cognitive Aging and Dementia
2. KREMEN, WS Contributions of Behavior Genetics to Cognitive and Brain Aging
3. MCGUE, M Late-Life Change in Cognitive Function: Evidence from Longitudinal Twin Research
4. GATZ, M Contributions of Twin Studies to Discerning Sex Differences in Dementia
5. PEDERSEN, N Epigenetic processes: A Potential Mechanism for Gene Environment Interplay?

Saturday February 6, 9:00-10:30 AM

Invited Symposium 4: Cognitive Rehabilitation and Neuroimaging in Clinical Populations

Chair: John Deluca
Presenters: John Deluca, Nancy D. ChiaraVallotti, Natalia Ojeda Del Pozo, Matthew S. Keshavar
Discussant: Erin Bigler

Symposium Abstracts
1. DELUCA, J Cognitive Rehabilitation and Neuroimaging in Clinical Populations
2. DELUCA, J Cognitive Rehabilitation in Multiple Sclerosis
3. CHIARAVALLOTTI, ND Cognitive Rehabilitation and Neuroimaging in Traumatic Brain Injury (TBI)
4. OJEDA, N Cognitive, Functional and Brain Changes in Parkinson’s Disease After Cognitive Remediation
5. KESHAVAN, M Cognitive Rehabilitation and Neuroimaging in Schizophrenia
# Ancillary Meetings

INS is pleased to host ancillary meetings, organized by individuals and professional groups who are attending the 44th Annual Meeting. 

Please note that INS name badges must be worn when using ancillary space, and only ancillary meetings that have been pre-authorized by the INS Executive Office are permitted.

The following schedule of ancillary meetings is provided for the convenience of our attendees and may not be complete. Additional meetings and changes will be posted on the message boards located near the INS Registration Desk on Level Three.

Assessments YOU Depend On

Psychologists around the world trust Pearson’s assessments to help them make informed decisions in their ongoing efforts to improve lives. Our innovative assessments are research-based and proven to be valid and reliable.

Plus, Pearson’s Q-interactive® and Q-global® can help you transform test administration and reporting in your practice. These convenient, easy-to-use digital systems allow you to improve your workflow while better serving clients.

For more information, please stop by our booth or visit PearsonClinical.com
Continuing Education Program

INS continuing education sessions are designed to provide a practical review of current research as well as information on clinical and technological advances in specific areas of content relevant to neuropsychology and the cognitive neurosciences.

CE Course Registration

Continuing Education (CE) options listed below are not included in the general registration fee. You must register and pay additional fee(s) in order to attend CE workshops, or to receive CE credit for attending plenary sessions.

Your name badge is required for admittance to CE Workshops, and will contain the session number of any CE sessions for which you are registered.

How to Obtain CE Credits After Registering

Please take the attendance slip from the proctor as you enter, complete it during the session, and return it to the proctor as you exit (your full attendance must be documented in order for credits to be granted).

An online evaluation form must also be completed in order for credits to be given. Once the evaluation is completed, a certificate of completion may be downloaded. Evaluations will be available online at the INS website approximately 24 hours after each session has concluded.

To access online evaluations, visit the INS website at www.the-ins.org, then simply follow the link on the homepage to obtain CE credits for the 2016 Annual Meeting.

CE Workshops

All CE workshops require advance registration and an additional fee in order to attend.

All 1.5-hour CE workshops are scheduled from 7:20–8:50 AM and include a continental breakfast that is served from 7–7:15 AM (morning sessions will begin promptly at 7:20 AM).

Plenary Sessions

All plenary sessions are offered for one hour of continuing education (CE) credit. A separate registration and fee must be completed—either before or following completion of the plenary session—and all CE requirements must be met in order for credit(s) to be granted.

Please Note: In order to receive continuing education credit(s) for participation in Plenary Sessions, either now or at a later time, attendees must obtain an attendance slip from the volunteer upon their entry to the session and must submit the completed slip to the volunteer upon their exit. No credits can be granted, at present or in the future, without submission of completed attendance slips.

INS CE Committee

Raul Gonzalez has served as the Director of the INS Continuing Education Committee since February 2013.

APA Continuing Education Credit

The International Neuropsychological Society is approved by the American Psychological Association to sponsor Continuing Education for psychologists. INS maintains responsibility for this program and its content. Up to 17.5 credit hours are available for this program. All CE sessions are geared for advanced level instructional activity.
February 3, 9:00 AM-12:00 PM

CE 1: Functional MRI: The History, Basics, Cutting Edge, and Future

PETER A. BANDETTINI, PHD
Chief, Section on Functional Imaging Methods, Laboratory of Brain and Cognition, Intramural Research Program; Director, Functional MRI Core Facility, National Institute of Mental Health, National Institutes of Health (NIH) Bethesda, Maryland, USA

Abstract
In this three hour lecture, I will give a broad yet hopefully informative and entertaining perspective of fMRI technology, methodology, signal interpretation, and to some degree, fMRI applications. The lecture will start with a detailed overview of how fMRI began. It will then continue with an in-depth description of fMRI contrast mechanisms – including blood oxygen level dependent (BOLD) contrast but going beyond this to other less common but nevertheless important contrast mechanisms – including blood perfusion, volume, and cerebral oxidative metabolic rate (CMRO2). Following this, the lecture will include a discussion of the principles of fMRI temporal and spatial resolution, as well as how to avoid common mistakes in fMRI signal interpretation. In the 'cutting edge' section of this lecture I will discuss some of the more recent developments of fMRI, including resting state fMRI, fMRI decoding, individual classification with fMRI, and real time fMRI. I will conclude with some thoughts on the most interesting directions where fMRI is heading. These include the clinical use of fMRI on individuals to aid in psychiatric/neurologic/developmental disorder diagnosis as well as prediction of outcome and monitoring of therapy.

February 3, 9:00 AM-12:00 PM

CE 2: Science and Practice Considerations for Bilingual Neuropsychology: A Focus on the Hispanic/Latino Community

MELISSA LAMAR, PHD
Associate Professor of Psychiatry and Psychology, Director of Cognitive Aging and Vascular Health, University of Illinois at Chicago Chicago, Illinois, USA

MARIA T. SCHULTHEIS, PHD
Professor and Director of Clinical Training, Department of Psychology, Drexel University Philadelphia, Pennsylvania, USA

Abstract
There are ~55 million Hispanics/Latinos living in the US representing 17% of the total US population, these numbers will more than double to ~130 million or 31% of the US population by 2060 (CDC, 2014); thus, understanding the needs of this community as it relates to the science and practice of neuropsychology is critical. This course will first review the literature on cognition and brain aging as it relates to Hispanics/Latinos and highlight key areas of concern for both research and clinical work with this population. Second, clinical considerations will be addressed more specifically as they relate to adequate assessment, including review of considerations for selection of tests, norms and interpretation of Hispanic/Latino evaluations. Third, ethical considerations for working with bilingual individuals will be addressed. The workshop will conclude with a brief discussion of areas for future directions for both research and clinical needs.

February 3, 9:00 AM-12:00 PM

CE 3: Advancing Developmental Science Through the Application of Pediatric Neuropsychology in Africa

MICHAEL J. BOVIN, PHD, MPH
Professor of Psychiatry and of Neurology/Ophthalmology, Michigan State University East Lansing, Michigan, USA

BRUNO GIORDANI, PHD
Professor of Psychiatry, Neurology, and Psychology; Professor, School of Nursing; Chief Psychologist, Department of Psychiatry; Associate Director, Michigan Alzheimer’s Center; University of Michigan Ann Arbor, Michigan, USA

Abstract
Using exemplars from our research over the past 25 years, we present an overview of the application of neuropsychology to evaluate public health factors related to risk and resilience in sub-Saharan African children in resource-limited settings. We will present examples of clinical intervention and observational studies in early and middle childhood pertaining to pediatric infectious disease (e.g., HIV, Malaria), chronic disease (e.g., sickle-cell anemia), environmental risk factors (e.g., konzo disease), and neurodevelopmental intervention studies (e.g., computerized cognitive training, caregiver training). The theoretical construct of a universal brain/behavior omnibus (Bovin & Giordani, 2009) will be used as an organizational framework for understanding the orchestration of developmental plasticity in brain/behavior development, including illustrations of interactions in brain/behavior development at culture-brain, culture-gene, and gene-brain levels. Our principal resource for this workshop will be our edited book the Neuropsychology of Children in Africa: Perspectives on Risk and Resilience (Springer Publishing, May 2013), as well as a forthcoming review of child neurodisability in the global context, to be published in Nature, 2016. The integration of neuropsychological science with risk and resilience in the global health context can provide a powerful vantage point for outcome in clinical trials, specifically, and for the universal advancement of brain-behavior science in children, in general.
Abstract

The human brain is made up of neurons, highly sophisticated and stable cellular structures. However, neurons are engaged in dynamically changing networks that provide a most energy efficient, spatially compact, and precise means to process input signals and generate adaptable responses to a changing environment. Plasticity is an intrinsic property of such networks, and may be best conceptualized as evolution’s invention to enable the nervous system to escape the restrictions of its own genome (and its highly specialized cellular specification), and thus adapt to environmental pressures, physiologic changes, and experiences.

Consider the challenges faces by a musician. Playing a musical instrument, requires more than factual knowledge about the musical instrument and about the mechanics of how it is played. The central nervous system (and the brain) must learn the musical instrument and generate music. This is a complex and highly adaptive process that requires more than the ability to play an instrument.

The human brain is made up of neurones, highly sophisticated and stable cellular structures. However, neurones are engaged in dynamically changing networks that provide a most energy efficient, spatially compact, and precise means to process input signals and generate adaptable responses to a changing environment. Plasticity is an intrinsic property of such networks, and may be best conceptualized as evolution’s invention to enable the nervous system to escape the restrictions of its own genome (and its highly specialized cellular specification), and thus adapt to environmental pressures, physiologic changes, and experiences.

Beyond such learning-realted brain changes, the brain also changes across the lifespan in response to environmental influences, life events, experiences, etc. At the same time, the mechanisms of plasticity and the resulting brain dynamics vary, as indeed they vary across individuals and are modified by genetic predispositions, environmental influences, life experiences and even age. Innovative experimental paradigms can assess cortical plasticity in humans, in vivo, across the lifespan, and offer translatable biomarkers that can bridge the gap between animal models and humans.

Abstract

Depression is a frequently occurring psychiatric disorder, with a yearly prevalence of nearly 10% in the adult population, and lifetime prevalence around 20%. Depression is also frequently observed as a comorbid condition with other disorders, such as dementia, cardiovascular illness, traumatic brain injury, multiple sclerosis, learning disability, etc., frequently as a secondary outcome. Tremendous strides have been made toward understanding the neuropsychological, neuroanatomical, and neuroimaging findings associated with depression. Whereas understanding of the neuroanatomical networks involved in depression and related mood disorders remains in an adolescent phase, neuropsychological findings in depression and related mood disorders are fairly well codified at this point. The neuropsychological findings in depression include difficulties in attention, psychomotor speed, executive functioning, memory, and emotion recognition. In addition, there are a number of clinical, course, lifespan and demographic features that substantially impact cognitive performance in the context of a mood disorder. These include family history, age of onset, polypharmacy/substance abuse, medical complications, symptom levels, greater severity, number of episodes, and resistance to traditional treatments. Whereas the etiologies for depression-associated cognitive difficulties are heterogeneous, the co-occurrence of features of depression and cognitive difficulties of specific types suggests a common set of neural networks that may be adversely affected, including medial and ventral frontal, limbic, and basal ganglia structures. Neuroimaging paradigms offer meaningful and translational techniques for probing these affected circuits and for understanding treatment options and targets.
Thursday, February 4: Breakfast CE Workshops (1.5-Hour)

CE 7: Chemical Exposures and the Nervous System: Clinical Findings and Research Evidence
SALON F
ROBERTA F. WHITE, PHD
Chair and Professor, Department of Environmental Health, Boston University School of Public Health
Professor and Attending in Neurology (Neuropsychology), Boston University School of Medicine
Boston, Massachusetts, USA

Abstract
Effects of exposures to substances with neurotoxic properties such as heavy metals, organic solvents, pesticides/insecticides, and carbon monoxide include behavioral and neuroimaging changes that can be characterized both clinically and in epidemiologic research using neuropsychological and neuroimaging methods. The field of inquiry on these effects is broadly known as behavioral toxicology and has advanced significantly in the past 30 years. This workshop will briefly review classes of known neurotoxicants and typical sources of exposure to them. It will describe the methods by which particular substances become identified as neurotoxic. Strategies for clinical assessment and for research investigations of exposure effects will be outlined. Research and clinical examples will be provided, with a focus on metals and gases.

CE 8: Mild Cognitive Impairment and Preclinical Alzheimer’s Disease: Concepts in Need of Input from Neuropsychology
SALON G
MARK W. BONDI, PHD, PHD
Professor of Psychiatry, University of California, San Diego
Director, Neuropsychological Assessment Unit, VA San Diego Healthcare System
San Diego, California, USA

Abstract
This workshop will present updated diagnostic criteria, with a focus on the neuropsychological features of mild cognitive impairment (MCI) and preclinical Alzheimer’s disease (AD), in the context of the pathogenesis of AD. Seeking to refine diagnostic and prediction models, in a series of studies we have compared the conventional criteria, for example as operationalized by the Alzheimer’s Disease Neuroimaging Initiative (ADNI), and our actuarial neuropsychological method. Results from these studies suggest that conventional criteria are susceptible to both false positive and false negative diagnostic errors, whereas MCI participants diagnosed via neuropsychological criteria yield dissociable cognitive phenotypes, significant biomarker associations, more stable diagnoses, and greater percentages who progress to dementia than conventional MCI diagnostic criteria. We further extend this actuarial method to support refinement of the research criteria for preclinical AD diagnosis. This workshop reflects the research and clinical advances in identifying MCI, examining its biomarker signatures, and offers new opportunities for diagnosis, prevention, and treatment of AD in its prodromal period.

Friday, February 5: Breakfast CE Workshops (1.5-Hour)

CE 9: Cognitive and Behavioral Aspects of Frontotemporal Degeneration
SALON F
KATYA RASCOVSKY, PHD
Research Assistant Professor, Department of Neurology and Penn Frontotemporal Degeneration Center, Perelman School of Medicine, University of Pennsylvania
Philadelphia, Pennsylvania, USA

Abstract
Frontotemporal degeneration (FTD) can manifest as a spectrum of clinical syndromes, ranging from behavioral impairment to language or motor dysfunction. Recently, revised diagnostic criteria have been proposed for the behavioral and progressive aphasia syndromes associated with frontotemporal degeneration. The course will summarize these diagnostic guidelines, and highlight some lingering controversies in the classification of FTD clinical syndromes. We will discuss common tools and methods used to identify the insidious cognitive and behavioral changes of behavioral variant frontotemporal dementia (bvFTD). With regards to primary progressive aphasia (PPA), we will discuss the scope of the semantic disorder in semantic-variant PPA, the nature of the speech disorder in non-fluent, agrammatic PPA, and the preliminary utility of a logopenic PPA classification.
Friday, February 5: Breakfast CE Workshops (1.5-Hour)

February 5, 7:20 AM-8:50 AM

CE 10: Mild Traumatic Brain Injury and the Postconcussion Syndrome: How Does the Science Translate to Clinical Practice?

SALON G

MICHAEL MCCREA, PHD
Professor of Neurosurgery and Neurology, Director of Brain Injury Research, Medical College of Wisconsin
Research Neuropsychologist, Clement Zablocki VA Medical Center
Milwaukee, Wisconsin, USA

GRANT L. IVERSON, PHD
Professor, Department of Physical Medicine & Rehabilitation, Harvard Medical School
Director, Sports Concussion Program, Massachusetts General Hospital for Children
Associate Director, Traumatic Brain Injury, Red Sox Foundation and Massachusetts General Hospital Home Base Program
Boston, Massachusetts, USA

Abstract
The diagnosis and treatment of mild traumatic brain injury (mTBI) have historically been hampered by an incomplete base of scientific evidence to guide clinicians. Major advances in the basic and clinical science of mTBI over the past decade have increased our understanding of the natural history of injury and recovery in civilians, athletes, and military service members affected by mTBI. As a result, we have a more clear understanding of how acute injury characteristics and comorbidities affect recovery and outcome. Collectively, the new evidence base now establishes a foundation on which to build integrative approaches to injury assessment and treatment. This workshop will provide a focused review of the current scientific literature on mTBI and discuss clinical translation designed to improve outcome and reduce disability associated with this injury.

Saturday, February 6: Breakfast CE Workshops (1.5-Hour)

February 6, 7:20 AM-8:50 AM

CE 11: War and the Brain: Neuropsychological Alterations Among Returning Veterans

SALON F

JENNIFER J. VASTERLING, PHD
Chief of Psychology, VA Boston Healthcare System
Professor of Psychiatry, Boston University School of Medicine
Boston, Massachusetts, USA

Abstract
Complaints of neurocognitive impairment have emerged after almost every major war-zone deployment in recent history. While contextualizing recent war-zone participation within this historical context, this course will focus on neurocognitive alterations among veterans of the wars in Iraq and Afghanistan. Often referred to as the "signature wounds" of contemporary military conflicts, the course will cover two primary risk factors for neurocognitive alterations in returning veterans: traumatic brain injury (TBI) and psychological stress. The course will review the literature on neuropsychological consequences of deployment TBI, especially focusing on mild TBI, the neuropsychological consequences of stress-related mental disorders, especially focusing on posttraumatic stress disorder (PTSD), and potential interactions between deployment TBI and PTSD.

February 6, 7:20 AM-8:50 AM

CE 12: Introduction to Ethics in the Mind- and Neuro-Sciences (Neuroethics)

SALON G

ERIC RACINE, PHD, PHD
Director, Neuroethics Research Unit; Associate Research Professor; Associate Director, Academic Affairs; Institut de recherches cliniques de Montréal (IRCM)
Associate Research Professor, Department of Medicine and Department of Social and Preventive Medicine (Bioethics Programs), Faculty of Medicine, Université de Montréal
Adjunct Professor, Department of Neurology and Neurosurgery, Associate/Affiliate Member, Division of Experimental Medicine/Biomedical Ethics Unit, Faculty of Medicine; McGill University

Abstract
With advances in the behavioural and brain sciences, a new field of ethics, "neuroethics", has emerged as an interdisciplinary response to important ethical dilemmas associated with research, health care delivery, and health policy. The field also attempts to capture insights from neuroscience to inform how we view ethics. This workshop will introduce to the history and development of neuroethics. Then, three examples of clinical practices and related research areas where the speaker has been active will be summarized and discussed with participants: (1) the use of deep brain stimulation in Parkinson's disease and in neuropsychiatric conditions; (2) the use of fMRI in disorders of consciousness; and (3) the ethical challenges associated with the use of cognitive enhancers. The final part of the workshop will focus on how psychologists can further contribute to the development of neuroethics.
CE Program Disclosure Information

The International Neuropsychological Society requires program planners and instructional personnel to disclose information regarding any relevant financial and non-financial relationships related to course content prior to and during course planning. The intent of this disclosure is not to prevent a speaker with a significant financial or other relationship from making a presentation, but rather to provide listeners with information on which they can make their own judgments. It remains for the audience to determine whether speaker interests or relationships unduly influence a presentation with regard to exposition or conclusion.

Relevant financial relationships are those relationships in which the individual benefits by receiving a salary, royalty, intellectual property rights, gift, speaking fee, consulting fee, honoraria, ownership interest (e.g., stocks, stock options, or other ownership interest, excluding diversified mutual funds), or other financial benefit. Financial relationships can also include "contracted research" where the institution receives/manages the funds and the individual is the principal or named investigator on the grant.

Relevant non-financial relationships are those relationships that might bias an individual including any personal, professional, institutional, or other relationship. This may also include personal interest or cultural bias.

Program Planners

Rosemary Fama
Boston Program Chair, INS
No relevant financial or nonfinancial relationships exist.

Raul Gonzalez
Director of Continuing Education, INS
No relevant financial or nonfinancial relationships exist.

Instructional Personnel

Rhoda Au
CE Workshop 5
Relevant financial relationship(s): Professor Au has a financial relationship with Digital Cognition Technologies, in which she has an ownership interest as a founding member. Relevant non-financial relationship(s): None.

Peter A. Bandettini
CE Workshop 1 and Plenary Session B
Relevant financial relationship(s): Dr. Bandettini receives honoraria for his role as Editor in Chief for the publication NeuroImage. Relevant non-financial relationship(s): None.

Sarah-Jayne Blakemore
Plenary Session D
No relevant financial or nonfinancial relationships exist.

Michael J. Boivin
CE Workshop 3
No relevant financial or nonfinancial relationships exist.

Mark Bondi
CE Workshop 8
No relevant financial or nonfinancial relationships exist.

Adele Diamond
Plenary Session F
No relevant financial or nonfinancial relationships exist.

Brad Dickerson
Plenary Session A
Relevant financial relationship(s): Professor Dickerson has received compensation in the form of consulting fees from Forum, Isis Pharmaceuticals, Haymarket Media, and Med Learning Group. He has also received compensation from Merck for his role as a consultant and Data Safety Monitoring Board member. He also receives royalties from Oxford University Press for his contribution as a book author. Relevant non-financial relationship(s): None.

Andrew Gelman
Plenary Session E
No relevant financial or nonfinancial relationships exist.

Bruno Giordani
CE Workshop 3
No relevant financial or nonfinancial relationships exist.

Grant L. Iverson
CE Workshop 10
Please see the addendum (information not available at time of printing).

Melissa Lamar
CE Workshop 2
Relevant financial relationship(s): Professor Lamar receives K01 grant support from the National Institutes of Health (NIH). Relevant non-financial relationship(s): None.

Scott Langenecker
CE Workshop 6
No relevant financial or nonfinancial relationships exist.

Michael McCrea
CE Workshop 10
No relevant financial or nonfinancial relationships exist.

Alvaro Pascual-Leone
CE Workshop 4 and Plenary Session C
Relevant financial relationship(s): Dr. Pascual-Leone receives financial support as a scientific advisory board member for Magstim, Axilium Robotics, Neuroelectrics, Neosync, and Starlab Neuroscience. He is also supported by grants from Neuronix and Nexstim and for his role as a scientific advisory board member. Relevant non-financial relationship(s): None.

Eric Racine
CE Workshop 12
No relevant financial or nonfinancial relationships exist.

Katya Rascovsky
CE Workshop 9
No relevant financial or nonfinancial relationships exist.

Maria T. Schultheis
CE Workshop 2
No relevant financial or nonfinancial relationships exist.

Jennifer J. Vasterling
CE Workshop 11
No relevant financial or nonfinancial relationships exist.

Ann D. Watts
Plenary Session G
No relevant financial or nonfinancial relationships exist.

Robert White
CE Workshop 7
No relevant financial or nonfinancial relationships exist.
ALL FEES WAIVED THROUGH 2016

Archives of Scientific Psychology
Editors: Cecil R. Reynolds, PhD, and Gary R. VandenBos, PhD
An open methodology, open data, and collaborative sharing journal. Articles are published in sections encompassing broad areas of psychological investigation including: behavioral and cognitive neuroscience, developmental and lifespan psychology, methods, measurement, and assessment, health and pediatric psychology and more. Visit the journal website for information on how to submit a paper.

Behavioral Neuroscience
Editor: Rebecca D. Burwell, PhD
Publishes original research articles as well as reviews in the broad field of the biological bases of behavior. Readers will find original, in-depth studies covering all aspects of behavioral neuroscience and featuring cutting-edge research in areas including learning, memory, motivation, homeostasis, sleep and circadian rhythms, reproduction, and cognition.

Decision
Editor: Jerome R. Busemeyer, PhD
Focuses on a theoretical understanding of neural, cognitive, social and economic aspects of human judgment and decision-making behavior. This multidisciplinary research journal publishes articles on all areas related to judgment and decision-making research including probabilistic inference, prediction, evaluation, choice, decisions under risk or uncertainty, and economic games.

Emotion
Editor: David DeSteno, PhD
Publishes significant contributions to the study of emotion from a wide range of theoretical traditions and research domains. The journal includes articles that advance knowledge and theory about all aspects of emotional processes.

Journal of Experimental Psychology: Learning, Memory, and Cognition
Editor: Robert L. Greene, PhD
Publishes original experimental studies on basic processes of cognition, learning, memory, imagery, concept formation, problem solving, decision making, thinking, reading, and language processing. The journal provides the latest advances along the entire spectrum of cognition studies.

Motivation Science
Editor: Deborah A. Prentice, PhD
The official journal of the Society for the Study of Motivation, this multidisciplinary journal publishes significant contributions to the study of motivation, broadly conceived. It publishes papers on diverse aspects of, and approaches to, the science of motivation, including work carried out in all subfields of psychology, cognitive science, economics, sociology, management science, organizational science, neuroscience, and political science.

Neuropsychology
Editor: Gregory G. Brown, PhD
Publishes primarily original, empirical research on the relation between brain and human cognitive, emotional, and behavioral function. The journal focuses on basic research as well as on applied, clinical research that will stimulate systematic experimental, cognitive, and behavioral investigations as well as improve the effectiveness, range, and depth of clinical practice.

Psychology of Consciousness: Theory, Research, and Practice
Editor: Steven Jay Lynn, PhD
This cross-disciplinary journal encompasses neuroscience, social, cognitive, and clinical psychology. It publishes articles on theory, research, methodology, and clinical applications related to the psychology of consciousness.

Psychology & Neuroscience
Editors: J. Landeira-Fernandez, PhD, A. Pedro M. Cruz, PhD, and Dora Fix Ventura, PhD
This journal encompasses all intersection areas between psychology and neurosciences, and encompasses five thematic sections: psychophysics and perception; plasticity and neural development; clinical and experimental neuropsychology; behavior/systems/cognition; and neuropsychopharmacology. This is the official journal of Instituto Brasileiro de Neuropsicologia e Comportamento.

To Order, Call 800-374-2721 | Fax To 202-336-5502 | Visit www.apa.org/pubs/journals

The International Neuropsychological Society owes a debt of gratitude to all participating student volunteers for lending their support at INS Boston 2016. Student volunteers play a critical role in the success of the INS Annual Meeting through their assistance in proctoring CE courses, monitoring poster sessions, and assisting at the Registration Desk—and in making the Annual Meeting a friendlier place for all attendees!

We sincerely thank our wonderful volunteers for their assistance and unbridled enthusiasm and commitment to INS.

Submitting Author Disclosures & Changes the Final Program

**Submitting Abstract Author Disclosures**

The electronic program book, available on the INS website at www.the-ins.org, contains a complete listing of submitting abstract author disclosures.

The International Neuropsychological Society requires all presenters to disclose to the audience any significant financial interest or other relationship with the manufacturer(s) of any commercial product(s) and/or provider(s) of commercial services discussed in an educational presentation and with any commercial supporters of the activity. The intent of this disclosure is not to prevent a speaker with a significant financial or other relationship from making a presentation, but rather to provide listeners with information on which they can make their own judgments. It remains for the audience to determine whether speaker interests or relationships unduly influence a presentation with regard to exposition or conclusion.

Please visit the INS website to view the electronic program book and a complete listing of submitting abstract author disclosures.

**Changes to the Final Program Posted On-Site**

Sessions and room locations listed in Section II of this book are preliminary and may have changed since the time of printing based on enrollment or other factors. Please check on-site materials and signage in Boston, or in the INS 2016 meeting app, for final room assignments. Please see on-site materials in Boston for changes to the Final Program.

**Final Addendum of Author Changes**

A list of important author changes that have occurred since the time of printing will be available on-site. The published meeting proceedings will include an addendum with all author changes that occurred after finalization, including author additions and other minor adjustments.

CE 6. Dynamic Considerations in Neuropsychological Assessment of Depressive Disorders: State, Trait, Scar and Burden

Presenter: Scott A. Langenecker
Back Bay (Dartmouth-Fairfield)

1. LANGENECKER, SA
   Dynamic Considerations in Neuropsychological Assessment of Depressive Disorders: State, Trait, Scar and Burden

3:00–4:15 PM

Poster Session 1. Behavioral Neurology, Electrophysiology/EEG, Epilepsy, and Memory
Gloucester Hall

Behavioral Neurology/Cerebral Lateralization/Callosal Studies

1. ALIOTO, A
   White Matter Integrity of the Corpus Callosum Mediates the Relationship Between Cardiorespiratory Fitness and Processing Speed in a Population of Cognitively Normal Older Adults

2. BURNETT, KA
   Inflexible Social Norm Perception in Agenesis of the Corpus Callosum

3. HA, J
   Verbal Problem Solving in Individuals with Agenesis of the Corpus Callosum

4. HEILMAN, KM
   Callosal Ideomotor Apraxia in Alzheimer’s Disease

5. HOLLAND, AK
   Reductions in Design Fluency and Cardiovascular Regulation Vary Selectively as a Function of Trait Hostility Level

6. MILLER, JS
   Adaptive Skills in High-Functioning Adults with ACC and ASD

7. MOES, P
   Left Happy Female, Right Angry Male: Hemisphere Differences in the Perception of Gender and Emotion

8. OSWALD, K
   Variability in Bimanual Coordination Dependent on Strength of Hand Dominance

9. RENTERIA-VAZQUEZ, TA
   Social Inferences from Animated Interacting Triangles in Agenesis of the Corpus Callosum: Labeled Topic Modeling

10. VAILLANCOURT, AA
    Personality Characteristics of Individuals with Agenesia of the Corpus Callosum

Electrophysiology/EEG/ERP

11. CLUNIES-ROSS, KL
    Hemispheric Differences in Tb Responses to Tone-pairs with Short and Long Interstimulus Intervals in Children

12. DUGGAN, EC
    Inhibitory Control in Bilinguals with and without Musical Training- A Pilot Study

13. EGETO, P
    Behavioural and EEG Indices of Conflict Monitoring

14. EULER, M
    Distinct Effects of Neural Activation and Consistency in Novelty Processing and Relations with IQ

15. HAUER, SL
    Counting Own Name -Clinical Robustness of Electrophysiology in Assessing Residual Cognition in Disorders of Consciousness

16. HERRERA, S
    Analysis of Contrast Processing Deficits in Schizophrenia and Schizoaffective Disorder Using Electrophysiological and Psychophysical Measures

17. MANGAL, P
    Intentional Enhancement Of Electro cortical Responses To Emotional Pictures By Parkinson Patients: Relation To Executive Function

18. MOORE, WR
    Neurophysiological Marker of Attention Switching Advantages in Bilinguals: A Pilot Study

19. NUNEZ, V
    A Neurophysiological Marker of Inhibition in Bilinguals: A Pilot Study

56. TORRES, S  
“Touch Your Head Means Touch Your Toes?” Executive Function Deficits In Preterm Children

57. UMEKUBO, KA  
Performance Differences on the Iowa Gambling Task in High Versus Low Schizotypy

58. VANDEN BUSSCHE, AB  
Assessing the Impact of Trauma on Hot and Cold Executive Functions Independent of Diagnosis

59. VERA-ESTAY, E  
All for one: Combined contributions of executive functioning and social cognition to moral reasoning in childhood

60. VOS, LC  
The Relationship between Creativity, Intelligence, and Executive Function

61. WELSH, M  
Effects of Task Context and Individual Differences on the “Heat” of Good Executive Function Tasks

62. WELSH, M  
Homeless Men Living in Transitional Housing: The BrainWise Curriculum and Improvements in Executive Functions and Coping Self-Efficacy

63. WILSON, C  
Clinical Utility of the Barkley Deficits in Executive Functioning—Children and Adolescents Scale in a Mixed Clinical Sample

64. WITKIN, G  
Utility of Tower of London in Identifying Executive Impairment in Children with ADHD and/or Learning Disability

65. WONG, MM  
Sleep quality and neuropsychological functioning among children of alcoholics and controls

66. ZIEMNIK, RE  
Reaction to Novelty as a Predictor of Reduced Executive Functioning Following an Expressive Suppression Task

67. ZUMBA, M  
Effect of Trauma Exposure on Cognitive Functioning in a Sample of High-risk Adults

### Medical/Neurological Disorders/Other (Child)

68. ALI, J  
Neurocognitive Functioning among Young Patients with Sickle Cell Disease: Associations with Demographic and Disease-related Factors

69. ANTONINI, T  
Attention and Executive Functions Following Proton Beam Radiation Therapy in Pediatric Patients with Brain Tumors

70. BADALY, D  
Executive Dysfunction and Social Maladjustment among Children with Congenital Heart Disease

71. BEARDEN, DJ  
Cognitive, School, and Emotional Functioning in Children and Adolescents with Recurrent Abdominal Pain

72. CALDERON, PH.D., J  
Cognitive Predictors of Social Cognition Outcomes in Adolescents with Congenital Heart Disease after Infant Open-Heart Surgery

73. CHAMBERS, AM  
The Relationship Between Childhood Sleep Initiation Problems and Verbal Memory

74. CONDIE, LO  
Adapted Developmental Assessment for Ages 18 months to 7 years

75. DOXIE, J  
The Impact of Parental Stress in the Relationship Between Verbal IQ and Adaptive Functioning in Children with Early Neurological Insult

76. FREDRICKSON, S  
Cognition following Decompression Surgery among Children with Chiari Malformation Type 1

77. GERNER, GJ  
Contributions of Executive Function to Math Achievement in Children Born Preterm and Children Born at Term with ADHD

78. GROSS, L  
Specificity of Memory Deficits in Children and Adolescents with Prenatal Alcohol Exposure

79. HEITZER, A  
School Readiness and Perinatal Risk in Preschoolers Born Preterm

80. KULESZ, PA  
The Longitudinal Effects of Shunt Treatment Predict Alterations in the Neural Correlates of the Posterior but not Anterior Attention Network in Spina Bifida Myelomeningocele

81. LUCCHETTI, A  
Neuropsychological Profiles in Parry Romberg Syndrome: A Case Series

82. MENTZER, M  
Case Study of Krabbe Disease Post-Bone Marrow Transplant

83. MITTAL, A  
Implications of Congenital Heart Defect on Neurocognitive Development: Case Study of Ebstein’s Anomaly

84. MOSS, NC  
Parenting Quality and Neurocognitive Outcomes in Children born Term and Preterm

85. NORRIS, T  
Improvements in Functional Independence During Inpatient Rehabilitation for Children with Brain Tumors

86. ODDI, K  
Neurocognitive Development Among Children Diagnosed with Methylmalonic Aciduria (MMA)

87. PETERS, B  
Perinatal Risk and Motor Abilities in Preterm-Born Preschoolers

88. SCHREIBER, JE  
Cognitive and Academic Functioning After Initiation of Hydroxyurea in Pediatric Patients with Sickle Cell Disease

89. STERN, S  
Verbal and Visual Memory Performance in a Cohort of Children with Chiari Malformation Type 1

90. TAM, H  
Neuropsychological Case Presentations of Two Common Monogenic Diabetes KCNJ11 Gene Variants

91. YUND, B  
Parent Reported Temperament in Young Children with Neurofibromatosis type 1

### Acquired Brain Injury (TBI/Cerebrovascular Injury & Disease - Adult)

92. LEVITCH, C  
Soccer Heading during Games is Associated with Neuropsychological Function in Amateur Players

93. LICHTENSTEIN, J  
Prevalence Rates of Conussion in Ultimate Frisbee: Preliminary Findings of the Conussion in Ultimate Frisbee Survey (CUFS)

94. LINNEA, K  
The Effects of a Yoga and Mindfulness Intervention on Executive Functioning in Traumatic Brain Injury
ADHD/Attentional Functions

95. GAUDET, CE
   The Role of Cultural Bias in the Continuous Performance Test Second Edition (CPT-II) in a Pediatric Sample

Cancer

96. POTVIN, D
   Traditional versus Computerized Assessment of Executive Dysfunction in Preschoolers within the Pediatric Oncology Population

Medical/Neurological Disorders/Other (Adult)

97. STENCLIK, JH
   Depression Uniquely Contributes to Performance on the MoCA in Deep Brain Stimulation Surgery Candidates with Parkinson’s Disease

98. STENCLIK, JH
   The Effect of Depression on Executive Functioning in Deep Brain Stimulation Surgery Candidates with Parkinson’s Disease

3:45–4:45 PM

INS Arthur Benton (Mid-Career) Award Presentation: The Evolving Role of Neuropsychological Investigations in Multiple Sclerosis

Presenter: Ralph Benedict
Salon HIJK

1. BENEDICT, RH
   The Evolving Role of Neuropsychological Investigations in Multiple Sclerosis

3:45–5:00 PM

Symposium 5. Genes, Neuropsychology, and Child Psychopathology
   Chair: Alysa Doyle
   Discussant: Larry J. Seidman
   Salon ABCDE

1. DOYLE, A
   Genes, neuropsychology, and child psychopathology

2. WILLCUTT, E
   Using Twins to Understand the Etiology and Neuropsychology of Comorbidity between ADHD and Learning Disorders

3. ADAMO, N
   Do Polygenic Risk Scores Predict Persistence and Remission of ADHD in Young Adulthood?

4. BURTON, CL
   A Genome-Wide Association Study of a Cognitive Endophenotype of ADHD in a Community-Based Pediatric Sample

5. DOYLE, A
   Association between Polygenic Risk for Schizophrenia and Executive Functions in Clinically-Referred Youth

3:45–5:05 PM

Invited Symposium 2. Sleep and Cognition
   Chair: Ian M. Colrain
   Salon G

1. COLRAIN, IM
   Sleep and Cognition

2. BLIWISE, DL
   Cognition and Sleep in Normal and Pathological Aging

3. ALOIA, MS
   Neuropsychological Consequences of Obstructive Sleep Apnea

4. COLRAIN, IM
   Alcoholism: Sleep, Brain and Cognitive Consequences

3:45–5:05 PM

Paper Session 4. HIV/AIDS
   Moderator: Michael R. Basso
   Salon F

1. DEVLIN, KN
   Empirically Derived Subtypes of Neuropsychological Impairment in HIV-1 Infection

2. BAKER, L
   Topological Organization of Whole-Brain Networks in HIV+ Individuals

3. CASALETTO, KB
   Metacognition is Associated with Executive Dysfunction and Manifest Everyday Functioning in HIV Infection

4. MENON, J
   Effect on HIV and TB co-infection on Neurobehavioural functioning- Evidence from Zambia

3:45–5:05 PM

Symposium 6. Elucidating Depressive Symptom, Cognitive, and Affective Dimensions through Integrated Neuropsychological and Cognitive Neurosciences
   Chair: Shawn M. McClintock
   Back Bay (Dartmouth-Fairfield)

1. MCCLINTOCK, SM
   Elucidating Depressive Symptom, Cognitive, and Affective Dimensions through Integrated Neuropsychological and Cognitive Neurosciences

2. DOTSON, VM
   Symptom Dimensions in Late-Life Subthreshold Depression: Evidence from Cognitive, Neuroscience, and Exercise Intervention Studies

3. LANGENECKER, SA
   Cognitive Control Dysfunction in Major Depression Disorder: a Lifespan Perspective
4. TREADWAY, M  
Neural Mechanisms of Effort-Based Decision-Making in Depression

5. MCCLINTOCK, SM  
Elucidating Complex Interactions Among Depressive symptoms, Neurocognitive Function, and Neurotherapeutic Stimulation

5:15–6:15 PM  
Plenary D (The INS Herbert Birch Memorial Lecture). Adolescence as a Sensitive Period of Social Brain Development  
Presenter: Sarah-Jayne Blakemore  
Salon ABCDE

1. BLAKEMORE, S  
Adolescence as a Sensitive Period of Social Brain Development

7:00–9:00 PM  
Student Social, Hosted by the INS Student Liaison Committee  
Lir Irish Pub & Restaurant (903 Boylston St)

FRIDAY, FEBRUARY 5, 2016

7:20–8:50 AM  
CE 9. Cognitive and Behavioral Aspects of Frontotemporal Degeneration  
Presenter: Katya Rascovsky  
Salon F

1. RASCOVSKY, K  
Cognitive and Behavioral Aspects of Frontotemporal Degeneration

7:20–8:50 AM  
CE 10. Mild Traumatic Brain Injury and the Postconcussion Syndrome: How Does the Science Translate to Clinical Practice?  
Presenters: Michael McCrea, Grant L. Iverson  
Salon G

1. MCCREA, M  
Mild Traumatic Brain Injury and the Postconcussion Syndrome: How Does the Science Translate to Clinical Practice?

9:00–10:30 AM  
Poster Session 5. Cancer, Cross Cultural, Forensic, Malingering/Effort Testing, and MS/ALS  
Gloucester Hall

Cancer

1. ASHFORD, JM  
Parental Distress and Associated Treatment and Neurocognitive Factors among Children Diagnosed with Craniopharyngioma

2. BADALY, D  
Disordered Sleep and Attention Problems among Children with Histories of Cancer and Stem Cell Transplantation

3. BANERJEE, P  
Voxel-Based Lesion-Symptom Mapping of Phonemic Fluency versus Semantic Fluency in Brain Tumor Patients

4. FOURNIER-GOODNIGHT, AS  
Predictors of Learning and Memory Performance in Patients Diagnosed with Pediatric Craniopharyngioma

5. GIOIA, A  
Profiles of Attention-Mediated Neurocognitive Functioning in Survivors of Pediatric Brain Tumors: Comparison with Children with Neurodevelopmental ADHD

6. GOGIA, A  
Neuropsychological Implications of Gliomas in Left Fronto-Parietal Operculum with respect to Tumor Size and Grade

7. HAMILTON, J  
The Impact of Family Functioning on Executive Functioning in Pediatric Medulloblastoma

8. HILE, S  
Functional Impairment in Childhood Cancer Survivors: Relationship with NIH Examiner Executive Measures and General Intellectual Functioning

9. IRISH, J  
Childhood Cancer Survivors’ Executive Functioning Skills: Does Scaffolding Bolster Behavioral Functioning?

10. JACOLA, LM  
The Utility of Parent Report in Predicting Future Neurocognitive Outcomes in Very Young Survivors of Childhood Acute Lymphoblastic Leukemia (ALL) Treated with Chemotherapy Only

11. NA, S  
BOLD Activity in Adult Survivors of Childhood Brain Tumors Following Continued Exposure on a Working Memory Task

12. PALTIN, I  
Neuropsychological Functioning at Baseline and at least 2 Years Post Cranial Proton Radiation Therapy

13. PETERSEN, J  
Late-Delayed Effects on Verbal and Visual Memory from Photon Radiotherapy for Pediatric Brain Tumors

14. TAIWO, Z  
The Neurological Predictor Scale Is Associated with Long-term Core Cognitive Outcomes in Adult Survivors of Childhood Brain Tumors
15. TRAVERS, LV  Executive Functioning and Quality of Life in Pediatric Brain Tumor Patients Post-Proton Radiation Therapy
16. VAN DYK, K  Cognitive Complaints in Breast Cancer Survivors (BCS): Association with Mood and Cognition
17. VAN DYK, K  Resting State EEG, Depression, and Memory in Breast Cancer Survivors (BCS)
18. WISE, S  Rates of Neuropsychological Impairment among Children Being Treated for High-Risk Acute Lymphoblastic Leukemia

**Cross Cultural**

19. ALI, J  Challenges in Cross-cultural Neuropsychological Consultation: a Case Study of a Non-verbal Guatemalan Immigrant
20. AVILA, J  Differential Reading Achievement-IQ Associations Across Ethnic Groups
21. BOIVIN, MJ  The Use of Eye Tracking Technology in a Modified Fagan Test to Assess Neurocognitive Development in Rural Ugandan Infants Exposed to HIV
22. BOIVIN, MJ  Automated Eye Tracking Technology Improves the Sensitivity of an Early Childhood Vigilance Test (ECVT) of Attention in Ugandan Children Perinatally Exposed to HIV
23. BOYER, K  Assessment of Arabic-speaking international patients: Experience from a Pediatric Epilepsy Center
24. BRYANT, KR  Education and Reading Ability Affects BNT Item Difficulty in a Rural Adult Sample
25. CARRION, C  Measures of Executive Functioning as Predictors of Adaptive Functioning in a Hispanic Sample with Limited English Proficiency
26. FUNES, CM  The Impact of Explicit Strategy Instruction on the Verbal Learning Outcomes of English- and Spanish-speaking Older Adults
27. HOLLER, KA  The Role of Cultural Bias: Childhood Intellectual Performance in a Psychiatric Inpatient Sample
28. LUONG-TRAN, C  Differences in Executive Functions and Behaviors of Asian and Caucasian Children
29. MUSIELAK, KA  Effects of Mediation Intervention for Sensitizing Caregivers (MISC) and a Health and Nutrition Education Program on the Sustained Attention of Ugandan Children with HIV
30. NEHRA, A  Are we getting Smarter? Generational change of cognitive testing performance in India
31. RIEGER, RE  Differential Associations Between Verbal IQ and Performance IQ and Executive Functioning Measures in Ethnically Diverse Preschoolers
32. SEDO, MA  Advanced Pre-alphabetic Stroop Describes Processing Speed and Executive Control in Foreign-language-speaking Children and Adults
33. SOTO, A  Neuropsychological Assessment: Operationalizing “Quality of Education” as High School Rankings Instead of Reading Level
34. WILNER, E  Cross-cultural Literacy Screening in Low-educated Immigrants: A Pilot Study

**Forensic Neuropsychology**

35. PECK, CP  Utility of FBS-r scores in Differentiating Conversion Disorders from Probable Malingering

**Malingering/Effort Testing**

36. BAEK, R  Diagnostic group differences in embedded performance validity testing among patients who scored below Word Memory Test or Medical Symptom Validity Test failure cutoff
37. BRANSON, R  Detecting Suboptimal Effort in Undergraduate Students Who Simulate Brain Injury
38. BREARLY, TW  Understanding the Word Memory Test: Performance Validity Beyond Learning and Memory
39. BROWER, M  Utility of the WAIS-IV Digit Span for Detecting Poor Effort
40. CALLOWAY, JA  Initial Validation of a New and Quick Performance Validity Test: Green’s License Plate Test
41. CAVACO, S  Predictors of adequate performance on the Coin in the Hand Test: findings from a clinical sample
42. COLLIER, S  Evaluation of Automated Sequences Task as an Index of Performance Validity in Pediatric Concussion
43. DOUGAN, J  Effectiveness of the ImPACT, TOMM, and an Emotional Stroop Paradigm to Detect Simulated “Sandbagging” on Baseline Concussion Testing
44. FARRER, TJ  Clinical Utility of TOMM Trial 1 in Academic Accessibility Populations
45. GRABYAN, JM  Errors on the First 10 Items of the Test of Memory Malingering Predicts Failure on Later Trials of the Test of Memory Malingering
46. HENDRIKS, M  Indicators of suboptimal effort embedded in the Wechsler Memory Scale – Fourth Edition (WMS-IV)
47. HOELZLE, J  Development and Preliminary Validation of the Vegas-Odds Test
48. HONG, D  Sensitivity and specificity of the Dementia Profile of Word Memory Test and Medical Symptom Validity Test among Patients Who Failed the Easy Subtests
49. KANSER, RJ  Detection of Simulated versus Bona Fide Traumatic Brain Injury Using Response Time on a Performance Validity Test
50. KLAVER, JM  The Relationship between Self-Reported Symptom Validity and Performance Validity in Children with Neurologic Disorders
51. LAURENT, R  Detecting Feigned ADHD Symptoms in College Students with the Test of Variables of Attention
52. LIPPA, SM  Subjective Memory Problems, Performance Validity Test Failure, and Objective Neurocognitive Performance
53. MARTIN, P  Does Performance Invalidity Impact the Accuracy of TOPF Word Reading Predictions of Premorbid FSIQ?
54. NORDSTROM, L  Performance Validity Testing Among OEF/OIF/OND Veterans in Research and Clinical Contexts
55. PASTOREK, NJ  
Choice of Performance Validity Test Drastically Alters the Relation between PTSD Diagnosis and Cognitive Testing

56. RABKIN, AN  
Classification Accuracy of an Embedded Forced Choice Measure of Effort in the Rey Auditory Verbal Learning Test Among Youth

57. RITCHIE, KA  
Effectiveness of the Vegas Odds Test in Comparison to Traditional and Embedded Performance Validity Tests

58. ROSSETTI, M  
Performance Validity in Deep Brain Stimulation Candidates

59. STEGMAN, RL  
Equal versus Separate Distributions of Neuropsychological Data Relative to Numbers of Performance Validity Measures

60. TOLFO, SE  
Base Rate and Norms for the Embedded Rey Auditory Learning Test in Samples of Patients Suspected of Dementia, Forensic Patients, Simulators, and Normal Control

61. WHEARTY, K  
Evaluation of the Validity of the Reliable Spatial Span as an Effort Index on the MATRICS Consensus Cognitive Battery in Schizophrenia

62. WHITESIDE, D  
Cross Validation of a Cross-Domain Logistically Derived Performance Validity Test in a Psychiatric Sample

### Multiple Sclerosis/ALS/Demyelinating Disorders

63. CHAVARRO, V  
Cognition, Fatigue And Depression in Neuromyelitis Optica Patients

64. CLEM, M  
Premorbid Cognitive Problems in Pediatric Multiple Sclerosis: Could grade retention be an early sign?

65. FAYAD, A  
Fatigue, Sleep, Quality of Life and Academic Functioning in Pediatric Multiple Sclerosis (MS)

66. FAYAD, A  
Impact of Fatigue, Sleep and Quality of Life on Cognition in Pediatric Multiple Sclerosis (MS)

67. LEAVITT, VM  
Warmer Body Temperature is Associated with Better Cognitive Efficiency in Relapsing-Remitting Multiple Sclerosis: A Multi-Center Study

68. RANDOLPH, J  
Association between Cognitive Complaints and Vulnerability to Environmental Distraction in Multiple Sclerosis

69. ROMAN, CA  
Structural Correlates of Emotion Processing in Multiple Sclerosis

70. SANDROFF, BM  
Acute Effects of Varying Intensities of Treadmill Walking Exercise on Cognition in Persons with Multiple Sclerosis

71. SEGALÀ, L  
The Effects of Dispositional Optimism on Cognition in Multiple Sclerosis

72. SUMOWSKI, JF  
Reading, Writing, and Reserve: Literacy Activities are linked to Hippocampal Volume and Memory in Multiple Sclerosis

73. TILL, C  
Age at onset predicts working memory following acute demyelinating syndrome in children

74. ZAMZOW, JF  
The Association Between Sleep Disorder Symptoms and Cognitive Function in Relapsing-Remitting Multiple Sclerosis

75. ZUPPICHINI, MD  
Structural White Matter Differences related to Learning and Memory Impairment in Multiple Sclerosis: An Exploratory DTI Analysis

### Cognitive Intervention/Rehabilitation

76. BERGQUIST, TF  
Relationship between Injury Severity and Outcome in Adults with Traumatic Brain Injury (TBI) Receiving Post-Acute Rehabilitation

77. RAMIREZ, FE  
Use of oral lavender oil for anxiety in a depression medical residential program

### Dementia (Alzheimer's Disease)

78. BRYANT, AM  
Family History of Alzheimer’s Disease Predicts Performance on Executive Functioning Measures in Cognitively Intact Adults

79. HUA, M  
Content- and Context-Component Memory Task Performance in Elderly Individuals with Subjective Cognitive Decline

80. SPAULDING, KN  
Two-Day Intervention Significantly Reduces Stress in Dementia Caregivers

81. SPAT, J  
The Neuropsychological Profile and Neuroimaging Biomarkers in a Patient with Corticobasal Syndrome with Underlying Alzheimer’s Pathology: A Case Study

### Drug/Toxin-Related Disorders (Including Alcoholism)

82. RAMIREZ, FE  
Lead Exposure and Mental Health

### Epilepsy/Seizures

83. SRNKA, KD  
Examination of Attention “Stability” in Children with Recent Onset Epilepsy

**9:15–10:45 AM**

**Symposium 7. Advances in Understanding the Organization and Cognitive/Behavioral Functions of the Cerebellum**

- **Chair:** Carol L. Armstrong  
- **Discussant:** Mark Mahone  
- **Salon ABCDE**

1. ARMSTRONG, CL  
Advances in Understanding the Organization and Cognitive/Behavioral Functions of the Cerebellum

2. LIMPEROPoulos, C  
The vulnerable immature cerebellum: Structural and functional consequences following early-life injury
3. WALSH, K  
Cerebellar Cognitive Affective Syndrome in Pediatric Neuro-Oncology: Intensification and Acceleration of Emerging Late Effects

4. SMITH, D  
The Paradox of Cerebellar Lateralization of Cognitive Function

5. ARMSTRONG, CL  
Mood Disorders Related to Cerebellar Activation and Cerebellar Injury

9:15–10:45 AM  
**Paper Session 5. Dementia 1**  
**Moderator: Dorene M. Rentz**  
**Salon F**

1. RACINE, AM  
Cluster Analysis of Biomarkers and Memory Test Scores Provide Empirical Support for Preclinical AD Staging and Non-AD Cognitive Decline in Late Middle Age: Findings from the WRAP Study

2. PAPP, KV  
The Neuropsychology of Biomarker-Defined Preclinical Stages of Alzheimer’s Disease

3. WATSON, CW  
Socioeconomic and Educational Factors Account for Racial Inequities in Dementia Incidence in a Community Dwelling Population

4. HOHMAN, TJ  
Asymptomatic Alzheimer’s Disease: Building a Better Resilience Phenotype

5. YEW, B  
Increased Cerebrovascular Resistance is Associated with Greater Amyloid-β Deposition and Worse Cognitive Performance in Preclinical and Clinical Alzheimer’s Disease

6. SCHULTZ, SA  
Sedentariness and moderate-intensity physical activity are associated with CSF biomarkers of Alzheimer’s disease; Findings from the Wisconsin Registry for Alzheimer’s Prevention

7. BOOTS, EA  
BDNF Val66Met Polymorphism Predicts Cognitive Decline in the Wisconsin Registry for Alzheimer’s Prevention

9:15–10:45 AM  
**Paper Session 6. Medical/Neurological Disorders, Child**  
**Moderator: Celiane Rey-Casserly**  
**Salon G**

1. PIERCY, JC  
Multiple Gestation and Neuropsychological Performance in Preschoolers Born Preterm

2. CALDERON, PH.D., J  
Impact of Early-Term Birth on Neuropsychological and Psychiatric Outcomes in Adolescents with Congenital Heart Disease

3. ANDERSON, PJ  
Toddler Behavior is Associated with School-age Cognitive Performance in Children Born Very Preterm

4. WASSERMAN, R  
Profiles of Neuropsychological Functioning in Children and Adolescents with Spina Bifida: Associations with Biopsychosocial Predictors and Functional Outcomes

5. FOX, ME  
Pituitary Disorders as a Predictor of Apathy and Executive Dysfunction in Adult Survivors of Childhood Brain Tumors

6. MRAKOTSKY, C  
Brain Structure and Neuropsychological Function in Pediatric Crohn’s Disease

7. CASNAR, C  
Longitudinal Examination of Fine Motor Skills in Children with Neurofibromatosis type 1

9:15–10:45 AM  
**Symposium 8. Deployment Trauma: Insights from the TRACTS Cohort on the Clinical, Cognitive, and Neuoranatomical Effects of Mild TBI and its Comorbidities in OEF/OIF/OND Veterans**  
**Chair: Catherine B. Fortier**  
**Discussant: Grant L. Iverson**  
**Back Bay (Dartmouth-Fairfield)**

1. FORTIER, CB  
Deployment Trauma: Insights from the TRACTS Cohort on the Clinical, Cognitive, and Neuoranatomical Effects of Mild TBI and its Comorbidities in OEF/OIF/OND Veterans

2. AMICK, M  
The Deployment Trauma Phenotype and Employment Status in OEF/OIF/OND Veterans

3. POOLE, V  
Chronic Military-related Mild Traumatic Brain Injury is Associated with Decreased Sustained Attention Ability, Not Decreased Global Neuropsychological Functioning

4. FORTIER, CB  
Deployment Trauma: Clinical Phenotypes and their Impact on Cognition in OEF/OIF/OND Veterans

5. TROTTER, BB  
Neuroanatomical correlates of blast exposure and PTSD, including brain aging trajectories

6. KENNA, A  
Feasibility and Acceptability of STEP-Home: A Rehabilitation Workshop to Facilitate Civilian Reintegration Among OEF/OIF/OND Veterans

10:45–11:00 AM  
**AM Coffee Break**  
**Gloucester Hall**

11:00 AM–12:00 PM  
**Plenary E. The Statistical Crisis in Science**  
**Presenter: Andrew Gelman**  
**Salon ABCDE**

1. GELMAN, A  
The Statistical Crisis in Science
12:30–2:00 PM  

**Poster Session 6, Aging, MCI, and Visuopatial/Neglect**

**Gloucester Hall**

### Aging

1. **ALLEN, K**
   - Distractibility, Aging, and Driving: Relationship of Scores on the Useful Field of View Across Mini Mental State Exam, Age, Diagnosis and Drivewise Assessment Outcome Scores

2. **ALLISON, S**
   - Route Repetition and Reversal in Older Adults

3. **BARULLI, D**
   - Cognitive Strategies as a Possible Mechanism of Cognitive Reserve

4. **BHERER, L**
   - Effects of combined physical exercise and cognitive training on executive functions and dual-task performance in older adults

5. **BIRDSILL, AG**
   - Executive Function, Not Memory, Is Associated with White Matter Structure in Middle Age

6. **CAMPBELL, LM**
   - Comparisons of Traditional and Comprehensive Approaches in Defining SuperAges

7. **CHANG, JE**
   - Discriminant Validity and Diagnostic Utility of the Test of Practical Judgment (TOP-J)

8. **CHERRY, BJ**
   - Blood Pressure and Cognition

9. **CHOI, A**
   - Cerebral Oximetry and Leukoaraiosis Contributions to Working Memory in Older Adults

10. **CHUNG, H**
    - Assessing Medication Management Abilities in Older Adults in an Inpatient Medical Rehabilitation Setting

11. **COHEN, J**
    - The Oblique Effect: Applying Ophthalmological and Neurophysiological Principles of Visuospatial Processing to Cognitive Aging and Vascular Health

12. **DEFORD, NE**
    - Does Less Efficient Pattern Separation Contribute to Age-Related Deficits in Spatial Memory?

13. **DENNY, K**
    - Assessment of a Multi-Modal Intervention to Enhance Cognitive Compensation Strategies and Promote Brain Health Activities

14. **DENNY, K**
    - Progression from Normal Cognition to Mild Cognitive Impairment in a Diverse Clinical- and Community-Based Elderly Cohort

15. **DO, N**
    - Predictors of Premorbid Intelligence and Cognitive Decline

16. **GERTSBERG, AG**
    - Cognitive reserve: The Role of Occupational Experience

17. **GRACIAN, EJ**
    - Executive function and memory contributions to medication management ability in cognitively normal, older adults

18. **GROSS, EZ**
    - Convergent and Discriminant Validity of Ex-Gaussian Parameter Estimates

19. **GUZMAN, VA**
    - Vascular Injuries to The Brain: Which Holes Matter?

20. **HIMES, L**
    - White Matter Lesion Burden and Functional Connectivity of Resting State Network in Healthy Aging

21. **HO, JK**
    - Protective Effects of Angiotensin II Type 1 Receptor Blockers on Cognition and Alzheimer’s Disease

22. **HOLDEN, HM**
    - Time-Based Prospective Memory Uniquely Predicts Financial Management Capacity in Older Adults

23. **JOANNETTE, M**
    - The Ability to Detect Changes in the Spatial Relations of Faces Is Impaired in Alzheimer’s Disease

24. **KARSTENS, A**
    - The Separate and Interactive Effects of Trauma and Depression on Cognition in Urban Dwelling Adults

25. **KIELB, S**
    - Objective Cognitive and Functional Loss and Dementia Risk in Subjective Cognitive Decline

26. **LAST, BS**
    - The Cost of Brain Aging: Medicare Expenditure Correlates of Atrophy and Cerebrovascular Disease in Older Adults

27. **LAVALLÉE, M**
    - Holistic face processing is impaired in Alzheimer’s disease and Lewy Body dementia

28. **MCALISTER, C**
    - Executive Function Subcomponents and their Relations to Everyday Functioning in Healthy Older Adults

29. **MCALISTER, C**
    - Everyday Functioning and Cognitive Correlates in Healthy Older Adults with Subjective Cognitive Concerns

30. **MCINTOSH, E**
    - MetS and Cortical Thickness of Entorhinal Cortex in Middle-Aged and Older Adults

31. **MCNEELY, J**
    - Blood Glucose Mediates the Relationship between Cognitive Function and Sleep Quality in Middle-Aged Adults

32. **MEMEL, MB**
    - The Role of Visual Integration and Working Memory in Age-Related Associative Memory Deficits

33. **MORENO, C**
    - Recall and Recognition Discriminability in Healthy Aging

34. **MORIN, R**
    - Predictors of WAIS Vocabulary Among Black and White Older Adults

35. **MUNIZ, MC**
    - Associations between Subjective Cognitive Decline, Depression, and Objective Cognitive Performance in Hispanic Elderly

36. **OLESON, S**
    - Apolipoprotein E Genotype Moderates the Relationship Between Carotid Atherosclerosis and Executive Function in Middle-Aged Adults

37. **PERRY, CE**
    - Latent Toxoplasmosis Association with Executive Function in Older Adults

38. **PERRY, CE**
    - Association between Memory Functioning and Latent Toxoplasmosis in Older Adults

39. **RADIGAN, LJ**
    - Cardio-metabolic Outcomes Following Close-Range Blast Exposure

40. **RHODES, E**
    - Grit Is Protective of Late-Life Cognition: Non-Cognitive Factors as Cognitive Reserve

41. **SANTORELLI, GD**
    - Neuroanatomical Correlates of Apathy in Younger and Older Adults

42. **SAURMAN, J**
    - Measurement Invariance of Dementia Severity in (8)

43. **SEEWALD, P**
    - Age-Related Differences on a New Test of Temporal Order Memory for Everyday Tasks

44. **SEIDLER, T**
    - Cognitive Engaging Activity is Associated with Preserved Cortical and Subcortical Volumes

45. **SELIGMAN, SC**
    - Effects of Goal and Cognitive Load on Eye Movements to Everyday Objects in Healthy Older Adults

46. **SOLOMON, T**
    - Cognitive Outcomes in a Randomized, Double-Blind, Placebo Controlled, Parallel Group, Efficacy Study of Alpha BRAIN® Administered Orally
47. SONG, H
48. STRANGE, L
49. SEVIGNY DUPONT, P
50. TAM, JW
51. THOMAS, KR
52. THOMPSON, J
53. TIERNEY, SM
54. TRIFILIO, E
55. VENKATESAN, UM
56. WALZAK, LC
57. WATERS, AB
58. WILLIAMS, M
59. ZLATAR, ZZ

**MCI (Mild Cognitive Impairment)**

60. ACOSTA, L
61. BROWN, DS
62. EDMONDS, EC

   Older Adults Taking AT1-Receptor Blockers Exhibit Reduced Cerebral Amyloid Retention and Progression to Dementia

55. POSADA, C
   Depression with Spiritual Delusions as a Manifestation of Early-Onset Alzheimer’s Disease: A Case Report

56. RADKE, A
   Recognition Memory as a Cognitive Biomarker for Alzheimer’s Disease

57. ROSTAMI, R
   The Association between Executive Function and Lipid Levels in the CSF of Individuals with Presymptomatic Alzheimer’s Pathology

58. SHERMAN, JC
   An investigation into cognitive and test factors that impact performance on the Free and Cued Recall Test among patients with MCI and Dementia

59. TAT, MJ
   Caregiver and clinician impressions of false memory in patients with Alzheimer’s disease: A questionnaire study

60. TATE, DF
   Global Measures of Brain Volume and Neuropsychological Performance in the Cache County Memory and Aging Study

61. VILA-CASTELAR, C
   Detecting response to Cholinergic treatment in AD after 6 week double-blind placebo controlled trial: sensitivity of attentional measures on accuracy, fatigue and variability

62. VILA-CASTELAR, C
   Attentional Blink predicts treatment response to cholinesterase inhibitors in patients with AD: accuracy on a high load top-down task

Dementia (Non-AD)

63. BERTOUX, M
   Social cognition distinguishes amnestic behavioural variant frontotemporal dementia from Alzheimer’s disease

64. CARR, A
   Perceived Emotional Intelligence (EI) and Social Behavior Disturbance in Behavioral Variant Frontotemporal Dementia (bvFTD) and Early-Onset Alzheimer’s Disease (eAD)

65. FEDOR, A
   Cognitive Function does not Moderate the Relationship Between Subjective and Objective Physical Activity in Older Adults

66. KORSNES, M
   The Mini-Mental State Exam (MMSE) and the Montreal Cognitive Assessment (MoCA) as a diagnostic screening tool in an old age psychiatry department

67. LATREILLE, V
   Neuropsychological Correlates of Dementia Development in Parkinson’s Disease

68. PARANAWITHANA, C
   Validation of the Repeatability Battery for the Assessment of Neuropsychological Status for individuals diagnosed with Dementia

69. SCHAEFER, LA
   Vowel Versus Consonant Letter-Word Fluency: Differences Between Dementia Types?

70. STALEY SHUMAKER, BE
   Variation of Verbal Memory in Healthy Older Adults with Diastolic Blood Pressure and Cholesterol

Drug/Toxin-Related Disorders (Including Alcoholism)

71. BAZINET, A
   Neuropsychological Performance of Adults with Active Methamphetamine Dependence Compared to Adults in Early Remission and Never Users

72. LE, BERRE, A
   Differential Impairment in Prospective and Retrospective Metamemory Monitoring in Nonanamnic Alcoholism: Evidence toward Mnemonic Anosognosia

73. MAHONEY, JJ
   The Impact of Comorbid Drug Use and Cocaine Use Patterns on Cognitive Functioning in Individuals with Cocaine Use Disorders

74. MAHONEY, JJ
   Cognitive Functioning in Cigarette-Deprived Smokers

75. MULHAUSER, K
   Abstinence-based Changes in Neurological Functioning During Residential Treatment for Alcohol and Cocaine Use Disorders

76. ROSS, JM
   Effects of Cannabis Use on Neurocognition among Persons Living with HIV: Preliminary Observations

77. ROSS, JM
   Decision-Making and Cannabis Use Interact to Predict Risky Sexual Behavior

78. SASSOON, SA
   Viscuospatial Construction and Memory in Adolescence: Relations with Age, Sex, Alcohol Drinking, and Organizational Strategy

79. SULLIVAN, K
   Herbicide Exposure and Brain Magnetic Resonance Imaging (MRI) in South African Farmers

80. TIMKO, A
   Psychiatric Symptom Clusters are Associated with Social Perception Task Performance among Individuals with Alcohol Use Disorder

81. TOMLINSON, E
   Smoking Effects on Cognitive Function in Veterans with Comorbid PTSD and Alcohol Use Disorder

82. WRIGHT, NE
   Young Adult Marijuana Use and Gender Effects on Frontolimbic Function: Depression, Anxiety, Impulsivity, and Executive Dysfunction

Electrophysiology/EEG/ERP

83. MIGNAULT GOULET, G
   Music Lessons in Teenagers with Congenital Amusia

Memory Functions

84. O’ SHEA, DM
   Older adults with poor self-rated memory have less depressive symptoms and better delayed memory performance when perceived self-efficacy is high
9:00–10:30 AM  
**Poster Symposium 2. Neuropsychological Assessment & Rehabilitation from Literates to Illiterates: An Indian Perspective**  
Organizer: Ashima Nehra  
Gloucester Exhibit Hall  
**Cognitive Intervention/Rehabilitation**

35. **NEHRA, A**  
Neuropsychological Assessment & Rehabilitation from Literates to Illiterates: An Indian Perspective

36. **NEHRA, A**  
Neuropsychological Assessment in India: Impact of Education Revolution

37. **KAUR, H**  
Development & Effectiveness of a Home Based Neuropsychological Rehabilitation Program for Patients Suffering from Aphasia

38. **NEHRA, A**  
Cognitive Rehabilitation of Individuals after Traumatic Brain Injury Using an Eclectic Literacy and Culture Free Intervention Program

9:00–10:30 AM  
**Invited Symposium 4. Cognitive Rehabilitation and Neuroimaging in Clinical Populations**  
Chair: John DeLuca  
Discussant: Erin D. Bigler  
Salon ABCDE

1. **DELUCA, J**  
Cognitive Rehabilitation and Neuroimaging in Clinical Populations

2. **DELUCA, J**  
Cognitive Rehabilitation in Multiple Sclerosis

3. **CHIARAVALLOTI, ND**  
Cognitive Rehabilitation and Neuroimaging in Traumatic Brain Injury (TBI)

4. **OJEDA, N**  
Cognitive, Functional and Brain Changes in Parkinson’s Disease After Cognitive Remediation

5. **KESHAVAN, M**  
Cognitive Rehabilitation and Neuroimaging in Schizophrenia

9:00–10:30 AM  
**Symposium 12. Health Factors Related to Cognitive and Neural Plasticity**  
Chair: Elizabeth Leritz  
Discussant: William P. Milberg  
Salon F

1. **LERITZ, E**  
Health Factors Related to Cognitive and Neural Plasticity

2. **LERITZ, E**  
Neuroanatomical and Neuropsychological Correlates of Conjoint Cerebrovascular Disease Risk

3. **SALAT, DH**  
Differential Associations between Systemic Markers of Disease and White Matter Tissue Health in Middle Aged and Older Adults

4. **Haley, A**  
Mechanisms linking abdominal obesity to neuronal viability in midlife

5. **HAYES, SM**  
Cognitive and Neural Correlates of Physical Activity in Aging

6. **VOSS, M**  
Investigating the Relationships Between Physical Activity, Exercise, and Fitness with Functional Brain Health in Older Adults

9:00–10:30 AM  
**Paper Session 11. Pediatric Neuropsychology**  
Moderator: Mary Best  
Salon G

1. **DENTON, CA**  
Effects of Attention-Deficit/Hyperactivity Disorder (ADHD) Treatment and Intensive Reading Instruction for Children with Comorbid ADHD and Significant Word Reading Difficulties (RD)

2. **SCOTT, J**  
Cognitive Functioning in Adolescent and Young Adult Cannabis Users: Results from a Large Community-Based Sample

3. **GONZALEZ, R**  
Decision-Making as a Risk for Development of Cannabis Dependence among Teens: Preliminary Observations

4. **HINTON, VJ**  
The Cognitive and Behavioral Phenotype Associated with Glut 1 Deficiency Syndrome

5. **MANGIN, KS**  
Trajectories of Cognitive Development in Very Preterm and Typically Developing Children

6. **HOOPER, SR**  
First Grade Predictors of Early Elementary School Writing Skills Through Fourth Grade

7. **TROYB, E**  
Examining the Relationship Between Restricted and Repetitive Behaviors and Executive Functioning in Children with Autism Spectrum Disorders

9:00–10:30 AM  
**Symposium 13. Risk Factors in the Development of Executive Functioning in Children**  
Chair: Rachel Weber  
Back Bay (Dartmouth-Fairfield)

1. **WEBER, R**  
Risk Factors in the Development of Executive Functioning in Children

2. **DUVALL, S**  
Risk Factors for Executive Function in Preschoolers Born Preterm

3. **WEBER, R**  
Risk Factors for Executive Functioning in Linguistically Diverse Children

4. **LAFAVOR, T**  
Executive Function in Homeless and Highly Mobile Children
10:30–10:45 AM  AM Coffee Break  Gloucester Exhibit Hall

10:45 AM–12:00 PM  Poster Session 9. Emotional Processes, Genetics, HIV/AIDS, and Psychopathology/Neuropsychiatry  Gloucester Hall

### Emotional Processes

1. **BEAUCHAMP, MH**  
   Attribution of moral emotions to social decision-making from childhood to early adulthood

2. **DENO, M**  
   Salivary Stress Hormones, Emotional Responses to Stress and Trait Emotional Intelligence: A Monozygotic Twin Study

3. **ECHLIN, HV**  
   Executive Processes in Emotion Regulation

4. **ELLIS, A**  
   Neural Response to Monetary Reward versus Loss Predicts Symptoms in Mood Disordered Youth

5. **FEIGON, M**  
   Gender Differences in Emotional Valence on the Semantic List learning Task

6. **FIGUEROA, PA**  
   Cognitive and Emotional Dimensions of Empathy in Individuals with Agenesis of the Corpus Callosum

7. **HAAK, CL**  
   Social Language Abilities as a Moderator of Child and Parent Report of Internalizing Symptoms

8. **HARRIS, K**  
   Predictive Value of Motoric and Depressive Symptoms on Functional Impairment in Parkinson’s Disease Patients

9. **IKANGA, JN**  
   An Empirical Approach to Defining Emotional Communication Disorders (ECD)

10. **IKANGA, JN**  
    An Empirical Approach to Defining Emotional Communication Disorders (ECD)

11. **KLINEBURGER, PC**  
    Frontal Lobe Deactivation During Intense Music-Evoked Emotion

12. **KRAUSE, WH**  
    Validity and Utility of Novel Primary Emotions in Multichannel Emotion Perception Tasks

13. **LAFO, JA**  
    Startling Facts about Emotion in Essential Tremor: Blunted emotional reactivity as indexed by the startle eyelink response

14. **LAI, L**  
    Global-Local Visual Attention, Mood and Temperament

15. **LEBLANC, É**  
    The “In-Group Advantage” for Perceiving Emotion across Demographic Groups and Communication Channels

16. **MCKINNEY, TL**  
    The development and validation of the Alberta Implicit Scale of Emotional Reactivity (AISER)

17. **MELTZER, EP**  
    Validation of the Emotion Regulation Questionnaire (ERQ) and Cognitive Emotion Regulation Questionnaire (CERQ) in Non-Demented Older Adults with Varying Degrees of Cognitive Complaints and/or Difficulties

18. **MYERS, TE**  
    Emotion Dysregulation & Apathy: Subjective and Physiological Responses Following a Mood Induction

19. **PARTHIBAN, C**  
    Highways of the Emotional Intellect: White Matter Microstructural Correlates of an Ability-Based Measure of Emotional Intelligence

20. **PISNER, D**  
    Social Cognition and Internalizing Symptoms: A Pilot Analysis

21. **SANTOSPAGO, B**  
    Alexithymia, Apathy, and Depressive Symptoms: Convergence and Divergence

22. **LEAFFER, EB**  
    Reversal of cognitive decline in a case of myotonic dystrophy treated for sleep problems

23. **MORIN-MONCET, O**  
    BDNF Val66Met Polymorphism, Motor Learning and Intermanual Transfer of Sensorimotor Skills: A Neuropsychological TMS Study

24. **TSAPANOU, A**  
    Examining the association between Apolipoprotein E-ε4 and self-reported sleep disturbances in non-demented older adults

### Genetics/Genetic Disorders

25. **FEE, RJ**  
    Parental report on the BRIEF does not distinguish performance on clinical measures of executive function in boys with Dystrophinopathy

26. **FISCHER, MP**  
    Neuropsychological Profile and Initial Treatment Outcomes in a Child with Beta-Mannosidosis

27. **HARLEY, D**  
    Influence of CETP on Executive Functioning in Healthy Aging Adults

28. **HARLEY, D**  
    Reversal of cognitive decline in a case of myotonic dystrophy treated for sleep problems

29. **MORIN-MONCET, O**  
    BDNF Val66Met Polymorphism, Motor Learning and Intermanual Transfer of Sensorimotor Skills: A Neuropsychological TMS Study

30. **TSAPANOU, A**  
    Examining the association between Apolipoprotein E-ε4 and self-reported sleep disturbances in non-demented older adults

### HIV/AIDS/Infectious Disease

31. **AMBROZIAK, AR**  
    Depression and HIV: effects on regional activity in resting state fMRI and cognitive performance

32. **ARCE RENTERIA, M**  
    Functional Assessment of HIV+ Adults in South Africa: Utility of the Patients’ Assessment of Own Functioning Questionnaire and Instrumental Activities of Daily Living Scale
37. ARCE RENTERÍA, M: An Evaluation of the Construct Validity of a Neuropsychology Tablet App for Lay Health Workers to Screen for HAND in South Africa.

38. BANERJEE, NS: Executive Functioning, Coping and Depression in HIV.

39. DASHER, NA: Nonverbal versus Verbal Learning and Memory in Asymptomatic HIV Patients.

40. DOYLE, KL: Verbal Memory Profiles in HIV-associated Neurocognitive Disorders: A Comparison with Huntington’s Disease and Temporal Lobe Epilepsy.

42. FAZELI, PL: The Montreal Cognitive Assessment to Screen for HIV-associated Neurocognitive Disorders in Older Adults: Sensitivity, Specificity, and External Validity.

43. KABUBA, N: The Use of Neuropsychological Tests in assessing HIV-associated neurocognitive disorders in Zambia.

44. KAMAT, R: Apathy Is Associated with Lower Mental and Physical Quality of Life in Persons Infected with HIV.

45. KORDOVSKI, V: Prospective Memory Is Related To Job Performance in Persons With HIV Infection.

46. KUHN, T: The Effects of HIV and Aging on Subcortical Shape Alterations: A 3D Morphometric Study.

47. MIRANDA, C: The Roles of Health Literacy, Neuropsychological Functioning, and Demographics in Health Disparities among HIV+ Adults.

48. MORGAN, EE: HIV-seropositive Individuals are at Risk for Misattributing the Source of Health-Related Information.

50. OBERMEIT, LC: Self-Reported Atributal Ability in Everyday Dysfunction: Defining Functional Dependence in HIV.

51. OLSEN, P: Non-Verbal Ability As An Estimator Of Premorbid Intelligence: Does It Remain Stable Among Ethnically Diverse HIV+ Adults?

52. SCHELL, E: Relations Between Poverty and Neuropsychological Function in HIV+ Adults.

53. SHEPPARD, DP: Random Number Generation in HIV Disease.

54. VILLALOBOS, J: Social Cognition is Associated with Greater Conflict on Social Aspects of a Medical Decision-Making Task.

55. WACLAWIK, K: The Contributions of Viral Infections, Substance Use and Psychiatric Diagnosis to Change in Memory over One Year in a Marginally Housed Sample.

56. WEBER, E: Self-generation improves prospective memory performance in HIV-infected adults.

Psychopathology/Neuropsychiatry (Including Schizophrenia)

57. BLANCHETTE, B: Impaired Cognitive Abilities in a Lifetime Obsessive-Compulsive Disorder Sample.

58. BURTON, CZ: Neuropsychological Correlates of Performance-Based Measures of Functional Capacity and Social Skills in Severe Mental Illness.

59. BURTON, CZ: Effects of Cognition and Psychiatric Symptom Severity on Work Outcomes in Severe Mental Illness.

60. CALLAHAN, JL: Verbal Learning and Memory Impairments Among World Trade Center Responders: Differential Correlates Among PTSD Sub-dimensions.

61. CHOUDHURY, TK: Deep brain stimulation (DBS) for treatment of therapy-refractory obsessive compulsive disorder (OCD): a case study highlighting neurocognitive and psychiatric changes.

62. CZEPIELEWSKI, LS: Cognitive Performances and Neuroanatomical Volumes at Early and Late Stages of Bipolar Disorder.

63. DAHLGREN, MK: Inhibitory Task Performance Is Not Worsened by Comorbid Marijuana Use in Patients with Bipolar Disorder.

64. ESTEVIS, E: Neuropsychological Correlates on Decisional Capacity for Informed Consent among Depressed Inpatients.

65. FEIGON, M: Detecting PTSD in Individuals with an Electrical Injury.

66. FORTE, M: Attentional Control Deficits in Schizophrenia.

68. FUKUNAGA, R: Reduced Rostral Anterior Cingulate Volume is Associated with Greater Frequency of Negative Automatic Thoughts in Adults with Major Depressive Disorder.

69. GAT-LAZER, S: Harm Avoidance and Reward Dependence in Patients with Eating Disorders.

70. GELUZ, ZS: Neuropsychological Correlates of Internet Addiction in University Students.

71. GORLYN, M: Neuropsychological Impairment in Depression is an Independent Symptom Dimension.

73. KEATS, LB: The Relevance of Online and Offline Theory of Mind (ToM) Processes in Predicting Social Skill Capacity among Inpatients with Schizophrenia-Spectrum Disorders.

74. KOO, B: Functional coherence along the hippocampal longitudinal axis fingerprints episodic memory problems in Schizophrenics.

75. LEWANDOWSKI, KE: Cognitive Variability in Psychosis: Cluster Solution Replication and Association with Resting State Networks.

76. MAKSIMOVIK, A: Synergistic Impact of Drinking and Smoking on White Matter Integrity and Cognitive Function in Young Veterans.

77. MORRA, L: The Role of Metabolic Abnormalities in the Generalized Neurocognitive Deficit in Schizophrenia.

78. OKRUSZEK, L: Memory of basic emotions in schizophrenia.

79. OLSON, EA: Delay Discounting and Anhedonia are Independently Associated with Suicidal Ideation in Depression.

80. OVERLY, T: Neurocognitive Correlates of Schizotypal Personality Traits in University Students.
31. PARIKH, SA  ROC Analysis of the Trauma Symptom Inventory in Assessing PTSD in Patients with Electrical Injury
32. PAULSON, J  Verbal Memory and Inflammation in Veterans with PTSD, Past PTSD, and No PTSD
33. PERAZA, JR  Does Neurocognitive Ability Predict Treatment Success for PTSD?
34. PETERSEN, J  Diffuse Cortical Differences in Schizophrenia: A Resting-State fMRI Study
35. PIMONTELE, MA  Cortical Predictors of Persistence of Apathy in Late-life Depression
36. PINSONNEAULT, M  Transactional Relationships Between Vocabulary and Physical Aggression during the Transition to Formal Schooling
37. SARAPAS, C  Relationships Between Attention and Anxiety in Low- and High- Stress Contexts
38. SULLIVAN, SK  Impaired Effort-Cost Computation in Schizophrenia is Associated with Avolition
39. THOMAS, KR  Predictors of Work Attainment After a Combined Treatment of Compensatory Cognitive Training and Supported Employment in Severe Mental Illness: Preliminary Results
40. TIMPANO SPORTIELLO, MR  Neurocognitive Profile of Patients with Obsessive-compulsive Disorder: Role of Executive Dysfunction
41. TORRES, I  Metacognitive Monitoring in Bipolar Disorder
42. TZOURIS, TA  The Effect Of Hallucinations on Cognition in Alzheimer’s and Parkinson’s Disease
43. TZOURIS, TA  The Effects of Hallucinations and Delusions on the Cognition of Older Adults
44. VADHAN, NP  Acute Neurocognitive Effects of Smoked Marijuana in Prodromal Psychosis
45. WANG, NY  The Role of Neurocognition, Psychiatric Symptoms, and Substance Use in Predicting Social and Occupational Functioning in a Marginally Housed Sample
46. WOOLVERTON, CB  Self-imagining Improves Memory in Individuals with First-episode Psychosis

10:45 AM–12:15 PM  Paper Session 12. Executive Functions/Frontal 2
Moderator: Stuart Hall  Salon ABCDE
1. CIRINO, PT  A Structural Framework for Executive Functions in Children
2. JONES, KE  Preliminary Validation of the BRIEF-2: Examination of Profiles Among ADHD Subtypes
3. ISQUITH, PK  Profiles of Everyday Executive Function with the BRIEF2
4. ISQUITH, PK  Development and Validation of Screening Forms for the BRIEF2

Chair: Maria T. Schultheis  Salon F
1. SCHULTHEIS, MT  Driving is more than cognition: Integrating evidence across neuropsychological populations
2. WHIPPLE, E  The relationship between anxiety and driving performance in combat veterans with PTSD and TBI
3. RAPHAEL, A  The Effect of Symptom Severity on Driving in Multiple Sclerosis: The Interaction Between Cognitive and Physical Impairments in a Functional Task
4. GRAEFE, AC  Neurocognitive Mediators of Virtual Reality Driving Behaviors and ADHD Symptomatology in Young Adults
5. PATRICK, K  Autism Spectrum Disorders and Driving: Cognitive and Social Impairment May Impact Driver Training

1. FABER, J  Facial Recognition Memory and Diffusion Tensor Imaging in Children with TBI
2. WILDE, EA  Adaptive Functioning Skills and Diffusion Tensor Imaging in Children with TBI
3. HYSENI, I  Atypical Tractography in Children Sustaining Traumatic Brain Injury at a Young Age: The Possible Role of Plasticity
4. WARE, AL  Age of initial shunt operation and shunt revisions predict long-term IQ and fine motor dexterity in myelomeningocele
5. AFSHAR, S  Time Spent Waiting for Liver Transplantation Predicts Long-Term Cognitive Outcomes in Children with End-Stage Liver Disease
6. MORSE, C  The Cerebellar Cognitive Affective Syndrome: Insights from Joubert Syndrome
7. NICHOLS, SL  Associations of Memory and Executive Functioning with Academic and Adaptive Functioning among Youth with Perinatal HIV Exposure and/or Infection

10:45 AM–12:15 PM  Symposium 15. Resilience to Brain Aging and Alzheimer’s Disease: Evidence from Imaging and Biomarker Studies
Chair: Ozioma C. Okonkwo  Back Bay (Dartmouth–Fairfield)
1. OKONKWO, OC  Resilience to Brain Aging and Alzheimer’s Disease: Evidence from Imaging and Biomarker Studies
2. VEMURI, P  Effect of Intellectual Enrichment on AD Biomarker Trajectories
3. SOLDAN, A  
   Relationship between Cognitive Reserve and Longitudinal Change in Cognition in Middle-Aged and Older Adults

4. RENTZ, DM  
   Cognitive Resilience in Preclinical Alzheimer’s disease: The Association of Tau and Amyloid Burden on Cognitive Performance

5. SCHULTZ, SA  
   Cardiorespiratory Fitness Modifies the Association between a Polygenic Risk Score and CSF Biomarkers in Preclinical Alzheimer’s Disease

6. BELLEVILLE, S  
   Early- and Late-Life Cognitive Stimulation: Effects on Brain Structure and Function and Relation to Reserve Models

12:45–2:00 PM  
Poster Session 10. ABI (Adult) and Language/Speech  
Gloucester Hall

Acquired Brain Injury (TBI/Cerebrovascular Injury & Disease - Adult)

1. ANDREWS, RJ  
   Predictions of Neuropsychological Symptom Inventory Total Score Using Psychological and TBI Measures

2. ASKEN, B  
   “Playing Through It”: Delayed Reporting and Removal from Athletic Activity Following Concussion Predicts Prolonged Recovery

3. BABAKHANYAN, J  
   Construct Validity and Factor Structures of the Automated Neuropsychological Assessment Metrics

4. BALASUBRAMANIAN, V  
   Lexical and Syntactic Processing in Left and Right Brain Damaged Adults

5. BANKS, SJ  
   Admitted Anabolic-Androgenic Steroid Use in Professional Fighters: Relationship with Hippocampal Volume and Cognition

6. BEAULIEU, C  
   BDNF Val66Met polymorphism effects on neuropsychological function in concussed athletes

7. BENNETT, L  
   The Impact of Primary Playing Position and Athletic Exposure on Performance Across Cognitive Domains in Disability-Seeking Retired NFL Players

8. BLOCK, CK  
   An Individualized Quantitative Behavioral Assessment (IQBA) Can Detect Consciousness Following Brain Injury Prior to Standardized Assessments

9. BOUCHARD, A  
   Estimating Premorbid Intellectual Functioning in TBI Survivors with a Schizophrenia-Spectrum Diagnosis: The Clinical Utility of the Wide Range Achievement Test

10. BRYSON, CN  
    Applying the Interpersonal Theory of Suicide to a Traumatic Brain Injury Sample

11. BUCHHOLZ, A  
    Actual and Perceived Performance on Cognitive Tasks as Correlates of Subjective Fatigue in Traumatic Brain Injury

12. CANNIZZARO, MS  
    Prefrontal Cortical Activity During Discourse Processing: Implications for Cognitive-Communicative Impairments

13. CHOU, KS  
    Functional Activation During Metacognitive Confidence Judgments After Traumatic Brain Injury

14. COOK, C  
    Effects of Screening for Postconcussive Syndrome (PCS) on PCS Symptom Self-Report and Neuropsychological Test Performance

15. CREW, EC  
    Acute Sleep Changes Following Sport-Related Concussion are Associated with Increased Intra-Individual Cognitive Variability on the ImPACT

16. CROCKER, LD  
    The Role of Depression and Posttraumatic Stress Disorder Symptoms in Cognitive Functioning in Veterans with a History of Mild Traumatic Brain Injury

17. DEDERER, J  
    Self-reported Fatigue and Cognition in Veterans with History of Concussion and PTSD

18. DOBRYAKOVA, E  
    Investigating the relationship between depression and motivation in TBI

19. DOIRON, MJ  
    Machine Learning Algorithms and Virtual Reality: Using Technology to Inform Our Understanding of Cognition and Driving in TBI

20. EDMUNDSON, M  
    Impact of Mild Traumatic Brain Injury on Personality

21. EVANGELISTA, ND  
    Brain-Derived Neurotrophic Factor (BDNF) Genotype is Related to Executive Function But Not Memory Performance in Veterans with History of Mild Traumatic Brain Injury

22. FATOORECHI, S  
    Relationship between Performance Validity and Perceived Workload in Healthy Adults and Adults with Traumatic Brain Injury

23. FAYTELL, MP  
    Using Disability Rating Scale Recovery Curves to Predict Performance on the PASAT After Closed Head Injury

24. FECHTER, B  
    Examining Predictors of Growth in Traumatic Brain Injury Rehabilitation

25. FEDIO, AA  
    Addressing Anger and Aggression during Recovery from Traumatic Brain Injury

26. FONDA, J  
    Association between Traumatic Brain Injury and Opioid Overdose

27. FUNES, C  
    Population Objective, Population Subjective (POPS); Gender Differences in the Importance of TBI Community Reintegration Variables

28. GASS, GS  
    Psychological Characteristics in Acute Traumatic Brain Injury: An MMPI-2 Study

29. GAYNOR, LS  
    Base Rates of Concussion-like Symptoms in Healthy Collegiate Athletes: a Predictive Tool for Post-Concussive Recovery Time

30. GULLETT, JM  
    Increased Delta Wave Sleep Associated with Central Apnea Events in Mild Traumatic Brain Injury

31. HALL, MG  
    Motor Perseveration Predicts Ideational Perseveration on the Wisconsin Card Sorting Test

32. HAMMOND, J  
    Bicycle Helmet Use Among College-Aged Individuals

33. JACKSON, CE  
    Post-concussive Symptom Reporting Among OEF/OIF/OND Veterans: Comparison Between Research and Clinical Contexts

34. JONES, J  
    White matter integrity and self-reported sleep complaints in OEF/OIF/OND Veterans with deployment-related mild TBI
35. **KAKAVAND, H**
   Cognitive Components of Verbal Encoding Deficits Following Traumatic Brain Injury

36. **KAKAVAND, H**
   Memory Process Deficits for Verbal Material in Retired Professional Football Players

37. **KARK, SM**
   Sleep Quality vs Quantity: Differential Effects on Cognitive and Functional Status in Veterans with TBI and PTSD

38. **KEELAN, RE**
   Diminished Auditory Emotion Perception Accuracy in Moderate to Severe Traumatic Brain Injury

39. **KIM, RT**
   Is Subjective Disinhibition Associated With Response Inhibition Performance in Veterans with Mild-Moderate Traumatic Brain Injury?

40. **KLIMOVA, A**
   Neural Correlates of Cognitive and Emotional Impairments in Acute Versus Chronic Mild Traumatic Brain Injury: a Diffusion Tensor Imaging Study

41. **KRISHNA, R**
   Using DTI to Narrow the Diagnosis of TBI in Cases of Global Cognitive Disorder

42. **LANCASTER, M**
   Acute White Matter Changes Following Sport-Related Concussion: A Longitudinal Diffusion Tensor and Diffusion Kurtosis Imaging Study

43. **LARA-RUIZ, J**
   Differential Association of Activity Memory Components and Memory Process Deficits Following Traumatic Brain Injury

44. **LEE, Y**
   Does Psychoeducation Promote Recovery for Patients with Persistent Concussion Symptoms?

45. **LEVEILLE, E**
   Emotion Recognition in Concussed Athletes

46. **MADIGAN, N**
   Factors Contributing to Executive Functioning Symptoms in mTBI

47. **MANDERINO, L**
   Athletes with ADHD or History of Academic Difficulties Show Intact Performance on Baseline ImPACT Testing

48. **MARTIN, R**
   Effect of Modifications in ICD-10 Criteria on Diagnostic Rates for Post-Concussive Syndrome

49. **MAXWELL, K**
   Examining Psychological Diagnoses and Memory Performance in Relationship with Performance Validity within Veterans Presenting with History of Mild Traumatic Brain Injury (mTBI)

50. **MELLINGER, M**
   Assessment and Remediation of Adult Aphasia Following Severe Traumatic Brain Injury in Infancy

51. **MERZ, Z**
   Exploratory Analysis of the Reintegration to Normal Living Index in a Stroke Population

52. **MIELKE, JB**
   Correlation of the ToPF and the WAIS-IV IQ scores in a High Functioning, Active Duty, Military Population

53. **MILLER, D**
   White Matter Abnormalities in Blast-Related mTBI are Associated With an Overall Index of Cognitive Impairment

54. **MONCRIEF, GG**
   Cognitive Reserve and Postconcussive Symptoms Reported by Blast Exposed Operation Enduring Freedom/Operation Iraqi Freedom (OEF/OIF) Veterans

55. **MOORE, R**
   Engagement in an Active Lifestyle is Associated with Better Neurocognitive Functioning Among Veterans with Mild Traumatic Brain Injury

56. **NAYLON, K**
   Impact of Cognitive Fatigue on Reported Post-Concussive Complaints

57. **O’CONNOR, TA**
   The Impact of Traumatic Brain Injury and Aggregate Comorbidities on Cognitive Functioning in a Marginally Housed Sample

58. **OHILHAUSER, L**
   Predictors of Length of Hospital Stay, Rate of Functional Improvement, and Functional Abilities at Discharge Following Stroke

59. **OSBORNE-CROWLEY, KL**
   Can Reversal Learning Deficits Explain Social Disinhibition Following Severe Traumatic Brain Injury?

60. **OSBORNE-CROWLEY, KL**
   Hyposmia, But Not Emotion Perception Impairment, Predicts Psychosocial Outcome after Severe Traumatic Brain Injury

61. **PAXTON, J**
   Executive Control and Memory Acquisition in Traumatic Brain Injury

62. **PETERSON, SK**
   Attention and Working Memory in OEF/OIF/OND Veterans with Mild Traumatic Brain Injury

63. **PISNER, D**
   Resilience Following Mild Traumatic Brain Injury is associated with Gray Matter Volume in the Left Precentral Gyrus

64. **RAU, HK**
   Intra-individual Variability on Neuropsychological Measures in OEF/OIF/OND Veterans: Associations with Blast-related mTBI and PTSD

65. **ROBINSON, ME**
   Close-Range Blast Exposure is Associated with Greater Clinical Burden

66. **ROTTHONG, N**
   Neuropsychological Associations of Mild Traumatic Brain Injury and Psychopathology

67. **SAMARINA, V**
   Cognitive, Somatic, and Emotional Changes in Patients with Mild Traumatic Brain Injury (mTBI) and Orthopedic Injuries at Baseline and 3 Months Post-Injury

68. **SANDERSON-CIMINO, M**
   Use of the TOMM Response Consistency Indices in Veterans with History of Mild Traumatic Brain Injury and PTSD

69. **SINGH, P**
   Time Dependent Differences in Gray Matter Volume in Individuals Post Mild Traumatic Brain Injury: A Voxel Based Morphometric Study

70. **SULLAN, M**
   The relationship between post-concussive sleep symptoms and recovery time in Division 1 collegiate athletes

71. **TATE, DF**
   Subjective Reports of Cognitive Dysfunction and Objective Neuropsychological Test Results Among Active Duty Service Members

72. **TERRY, DP**
   Microstructural White Matter Changes in Non-Professional Football Players 20-45 Years After Two or More Concussions

73. **VAKIL, E**
   Title: Direct and indirect measures of context in patients with moderate-to-severe Traumatic Brain Injury (TBI); The additive contribution of eye tracking

74. **VAN PATTEN, R**
   Predicting Return to Work at Six-Month Follow-up in Mild to Moderate Stroke Patients: The Relative Importance of Physical Disability and Neurocognitive Functioning

75. **VELEZ, CS**
   Base Rates Neuropsychological Performance in Service Members with Mild TBI, PTSD and Orthopedic Controls
76. VYNORIUS, KC
Lifetime Multiple Mild Traumatic Brain Injuries are Associated with Cognitive and Mood Symptoms in Young Healthy College Students

77. WALKER, KA
Total Sedation and Delirium are Related to Memory Functioning, but Not General Cognition, in Critically Ill ICU Patients at Time of Discharge

78. YEE, MK
Multiple Self-Reported Brain Injuries are Associated with Increased Health Symptoms in a Cohort of 1990-1991 Gulf War Veterans

79. YEE, MK
Self-Reported Exposures to Mild Traumatic Brain Injury and Neurotoxicants Predict Current Total Health Symptoms in a Cohort of 1990-1991 Gulf War Veterans

Language and Speech Functions/Aphasia

80. DANGUECAN, A
Challenging the Phonological/Deep Dyslexia Continuum: A Case Study

81. FONG, A
Do Bilinguals Have an Advantage in Learning a New Language?

82. JOHNSON, JP
Evaluating Responsiveness to Treatment and Generalization in Patients with Acquired Reading and Writing Deficits

Boston Naming Test Performance among French-speaking Acadians in Canada

89. STINSON, JM
Logopenic Progressive Aphasia in Patient with Meningioma: Neuropsychological Evaluations Over Time

1:00–2:30 PM
Chair: Brian Willoughby
Salon ABCDE

1. WILLOUGHBY, B
Disentangling Autism Symptomology Across Pathologies: Investigations of Shared Phenotypic Traits

2. COMAN, D
Sensory Abnormalities Beyond Autism Spectrum Disorders (ASD): An Investigation of a Shared Phenotypic Trait Across Other Major Psychiatric and Neurodevelopmental Conditions

3. PINEDA, J
Investigation of Restricted and Repetitive Behaviors Across Clinical Populations

4. DOOLEY, K
Autism Spectrum Disorder Diagnosis as a Potential Moderator of the Relationship Between Social Impairment and Externalizing/Internalizing Problems

1:00–2:30 PM
Symposium 17. Predictors and Outcomes of Pediatric Concussion: Insights from the Prospective, Multicenter 5P Project
Chair: Miriam H. Beauchamp
Salon F

1. BEAUCHAMP, MH
Predictors and Outcomes of Pediatric Concussion: Insights from the Prospective, Multicenter 5P Project

2. BEAUCHAMP, MH
Predictors of Neuropsychological Outcome after Pediatric Concussion

3. KEIGHTLEY, M
Neuromuscular and Neuromotor Performance following Pediatric Concussion

4. BROOKS, B
Psychological Functioning after Pediatric Concussion

5. YEATES, KO
Neuropsychological Functioning as a Predictor of Quality of Life after Pediatric Concussion

1:00–2:30 PM
Paper Session 14. Dementia 2
Moderator: Maxine Krengel
Salon G

1. BLANKEN, AE
Endophenotypes of Preclinical Alzheimer’s Disease Empirically-Derived from Both Cognitive and Cerebral Spinal Fluid Biomarkers

2. HASSENSTAB, J
CSF Biomarkers and Cognitive Decline in Autosomal Dominant Alzheimer’s Disease

3. TRIVEDI, MA
APOE genotype effects on resting state functional connectivity of the default mode network in middle-aged individuals with a parental history of Alzheimer’s disease

4. MINOR, A
Social and cognitive factors relate to the presence of subjective cognitive decline in non-demented older adults

5. NADKARNI, NK
The Cognition-Mobility Interface is Associated with Cerebral Amyloid Deposition in Clinically Normal Older Adults

6. COLEMAN, BW
Subjective Cognitive Complaints Predict Conversion to MCI and Alzheimer’s Disease Dementia

7. JEFFERSON, AL
Lower hematocrit and hemoglobin values relate to worse cognitive performance in older adults: The Vanderbilt Memory & Aging Project
50th Anniversary of INS

**INS CELEBRATES 50 YEARS**

2017 will mark the 50th Anniversary of the International Neuropsychological Society (INS). We hope you will join us in celebrating this important milestone at our 2017 meetings, including the 45th Annual Meeting in New Orleans from February 1-4, 2017 and the 2017 Mid-Year Meeting in Cape Town, South Africa from July 5-8, 2017.

**Boston Hotel Floor Plans**

Boston Marriott Copley Place

110 Huntington Ave, Boston, MA 02116
Abstract submission now open!

- Submission Guidelines at [www.ins-meeting.com](http://www.ins-meeting.com)

**Submission Deadline:** 23:59 U.S. Eastern Time on Sunday 14th February 2016
Let the BRIEF2 point you in the right direction

Now Available!

BRIEF2
Behavior Rating Inventory of Executive Function, Second Edition

The gold standard rating scale for executive function. The BRIEF family of assessments has been translated into more than 60 languages and has been the center of more than 800 peer-reviewed studies.

The BRIEF2 gives you more informed and pinpointed profiles and empowers you to implement even more effective interventions.

Pricing is only $330 for a Parent/Teacher/Self-Report Hand-Scored kit and $250 for a Parent/Teacher Hand-Scored kit.

Visit www.parinc.com or call 1.800.331.8378 to order your BRIEF2 kit today!

Make sure to visit the PAR booth while you’re in Boston to get hands-on experience with the BRIEF2!
