Dear Colleagues,

On behalf of the 2019 INS Program Committee, we are excited to welcome you to the 47th Annual Meeting of the International Neuropsychological Society in New York City.

The program theme this year - Embracing the Biopsychosocial Melting Pot – was chosen in honor of the Big Apple’s unparalleled mix of people as well as to reflect the fact that INS is at its very best when we blend together our diverse backgrounds. Topics for this year’s meeting were chosen to cut across biology and psychology, science and practice, neuroscientific disciplines, cultures, and the entirety of the developmental spectrum, from the very young to the very old. The invited speakers optimize this year’s theme and are internationally recognized experts who are talented, dynamic presenters. Their sessions promise to be as informative as they are engaging. Contributions from the INS membership and attendees further enhance the program. We received a record number of submissions this year (over 1,400!), and the posters, papers, and symposia will serve to showcase the strong state of INS and the continuing growth of the field.

An initial glance at this year’s program book/app will highlight a new feature of the INS meetings: color-coding of the scientific sessions, which we hope will simplify the process of finding topics of interest. This year includes more sessions than any previous INS meeting, resulting in a schedule that is chock-a-block full of difficult choices but necessary to accommodate the sheer number of submissions. The general conference schedule is similar to the well-received format used over the last couple of years. The program will begin with the Presidential Address on Wednesday afternoon, followed by the opening ceremony and a welcome reception that will include local music and refreshments. The meeting will conclude on Saturday after the Edith Kaplan Memorial Lecture and luncheon. In an exciting development this year, the Hispanic Neuropsychological Society’s half-day meeting will begin immediately after INS programming on Saturday.

A conference as large as this one would not be possible without the immense effort of many individuals. Melissa Lamar, CE Chair, and the CE Committee are to be commended for putting together a terrifically balanced and stimulating workshop series this year. We would also like to express our gratitude to the 2019 Program Committee, the Student Liaison Committee, the Student and Early Career Volunteers, and Gordon Chelune, INS Executive Director. Last, but certainly not least, we are indebted to the team at the INS office. They are as dedicated and organized as they are patient and helpful. Please thank Chantal Marcks, Stephanie Card, Davis Schoenfeld, Jamie Wilson, and Katie Coffman for their countless hours of work to bring the meeting to fruition.

We look forward to seeing you at the conference. Our hope is that you catch up with old friends, make a few new ones, enjoy the wonderful sights and sounds of NYC, and get just enough sleep in the city that never does to allow yourself to do some learning and contributing during what has shaped up to be a fantastic scientific program!

*On this date ONLY, the INS desk will be located on the Third Floor

Badge Policy

The INS name badge must be worn at all times during the Annual Meeting, during both INS-sponsored and privately-hosted events and activities (including during affiliated meetings and candidate interviews that occur on-site).

Lost badges may be replaced at the INS Desk. If you enrolled in optional CE workshops, your badge is required for entry into those sessions (you must show your badge to the volunteer proctor to gain entry). Only pre-registered participants are permitted in workshops.

Coat Check*

Official Venue & Headquarter Hotel

The official meeting venue and headquarter hotel is the Marriott Marquis Times Square. All events occur at the hotel, making it the preferred lodging choice for most attendees. The 47th Annual INS meeting is located in the heart of one of the most exhilarating, recognizable and inspiring cities in the world, New York. The Marriott Marquis is a cornerstone hotel in The Big Apple’s famous Times Square in Midtown Manhattan, mere steps away from exciting shops, Broadway shows, and world-class restaurants. The Times Square subway station can take you to the far reaches of what the city has to offer.

Three International airports service the New York Area: JFK and Newark (EWR), are located 17 miles from the hotel, while La Guardia (LGA), is located 10 miles from the hotel.

Attendees who are staying in the INS room block will receive COMPLIMENTARY internet access in their guest room. If you did not book in the INS room block but you are staying at the headquarter hotel, you can enroll in Marriott Rewards to receive FREE wireless internet whenever you stay with Marriott; enroll today at www.marriott.com/rewards/createAccount/createAccountPage1.mi?enrollmentSourceCode=3528.

Marriott Marquis Times Square

1535 Broadway
New York City, New York 10036 USA
Phone: +1-212-398-1900

What is Included in Registration?

The general meeting registration fee includes all **General Sessions**—described below—and allows attendees to utilize INS meeting space for candidate interviews and ancillary events. The only items not included in the general registration fee are **CE Workshops** and **Optional CE Credit for Plenary Attendance**, which are described below and in the Continuing Education section of this book.

<table>
<thead>
<tr>
<th>Included in General Meeting Registration:</th>
<th>Not Included (Optional Items):</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>General Sessions</strong></td>
<td><strong>CE Workshops</strong></td>
</tr>
<tr>
<td>General sessions are the heartbeat of the Annual Meeting’s scientific program, and are open to everyone who has paid the general fee. General sessions include all paper sessions, symposia, poster sessions, invited symposia, and INS social events.</td>
<td>In order to attend CE workshops, attendees must pre-register and pay an additional credit-based course fee. Generally, CE workshops may be added up to 24 hours prior to the start of each workshop. To add CE options, please inquire at the on-site registration desk during open hours. Volunteer proctors will check attendee badges at the door to verify registration; only pre-registered participants will be admitted. For continuing education accreditation and program requirements, please refer to CE Program details on page 33, or visit the New York meeting page at <a href="http://www.the-ins.org/meetings/ny2019">www.the-ins.org/meetings/ny2019</a>. If you registered for CE workshops and/or plenary credit(s) prior to approximately February 4, you should have already received an email with links to the handouts for your CE session. If you register on-site for CE options, you will receive the link to relevant handouts at that time. Please remember no paper copies are distributed on-site, and we highly recommend that you download and/or print handouts in advance of the session as we are expecting high bandwidth usage.</td>
</tr>
<tr>
<td><strong>Plenary Sessions</strong></td>
<td></td>
</tr>
<tr>
<td>All registered attendees are welcome and encouraged to attend the seven plenary addresses in this year’s program. Please Note: Volunteer proctors will be posted at the door of each plenary to distribute CE attendance slips to those who wish to seek optional CE credit for their attendance. Attendees DO NOT need to complete the CE attendance slip unless they plan to seek CE credit for their participation in the session, either now or at a later date.</td>
<td></td>
</tr>
<tr>
<td><strong>Ancillary Events</strong></td>
<td></td>
</tr>
<tr>
<td>Registered meeting attendees may also participate in the various ancillary meetings that are scheduled to occur throughout the four day meeting. For a complete list of ancillary events, please see the ancillary event schedule within this book. Please note that many ancillary events are invitation-only. All ancillary events must be arranged in advance through INS.</td>
<td></td>
</tr>
<tr>
<td><strong>Exhibit Hall &amp; Social Events</strong></td>
<td></td>
</tr>
<tr>
<td>Your INS badge allows entry to all official social events at the Annual Meeting, including: Daily networking with colleagues old and new in the Broadway Ballroom South, where all poster sessions, coffee breaks, and Exhibitors are located The welcome reception on Wednesday evening located in the Broadway Lounge on the 8th Floor The closing Kaplan Lecture Luncheon on Saturday afternoon located in Westside Ballroom Salons 3 &amp; 4 (advance RSVP requested)</td>
<td></td>
</tr>
</tbody>
</table>
Alerts & Flash Photography

Please mute or switch all cell phones, pagers, and other mobile devices to vibrate mode when entering sessions.

Flash photography is always strictly prohibited. Photos and/or other recordings may not be taken in the Exhibit Hall, or of any presentation without the express, written permission of the presenter(s).

Attendee Code of Conduct

All participants (including registered attendees and their guests, speakers, exhibitors, volunteers, staff, and all others) are anticipated to conduct themselves in an appropriate, professional, and respectful manner at all times during the INS 47th Annual Meeting. If an individual is unable to meet these expectations, INS reserves the right to ask them to leave the meeting without reimbursement.

Certificates of Attendance

If you require a certificate documenting your attendance, please inquire at the INS Registration Desk. You may also obtain a certificate after the meeting is over by emailing Ins@the-ins.org.

Continuing Education

For CE registration requirements and information, please see the previous page. For CE course and program requirements, including post-course evaluations and certificates, please see the CE section of this book.

Internet Access

Wireless internet access is available in all INS meeting spaces on levels four through six of the hotel. To get online, first connect to the wireless network called Marriott_Conf, and then enter the password: ins2019. Please see the previous page for information about wifi in guest rooms.

Interview Rooms

Rooms designated for candidate interviews are Wilder, Odets, O’Neill, and Ziegfeld (located on Floor 4) Broadhurst and Imperial (Saturday only, located on Floor 5).

General hours are 7:00-5:00, unless otherwise posted, detailed hours available in the app.

Please utilize the on-site message boards to post or check for interviewing opportunities. Interviews are arranged independently between interviewers and candidates; INS does not coordinate interviews.
Nursing Mothers
A private, locking room is available for nursing mothers during the same hours as the INS registration desk. Please check-in at the INS desk to obtain the key.

Published Proceedings
The complete scientific program and abstracts listing for the INS 47th Annual Meeting will be published in an online, supplemental issue of the Journal of the International Neuropsychological Society: JINS.

All supplemental issues of JINS are freely available online, without a subscription.

Prior to their publication in JINS, the 47th Annual Meeting proceedings (including the schedule, abstracts listing, and author and keyword indices) may be viewed or downloaded in PDF format via the INS website at: https://www.the-ins.org/files/meetings/ny2019/omnipress/ins_ny2019_proceedings.pdf

Special Events

INS Awards Ceremony & Welcome Reception
Don’t miss the INS Awards Ceremony on Wednesday, February 20th from 5:30–6:30 PM in the Broadway Ballroom North, with a kick-off performance by HusH “Us in Hip Hop” tour group.

Then, stick around for the Welcome Reception from 6:30–7:30 PM in the Broadway Lounge overlooking fabulous Times Square.

Student Social, Hosted by the INS Student Liaison Committee (SLC)
Trainees of all levels are welcome to join the INS SLC at their bi-annual Student Social for mingling and light refreshments. The Social will be held on Thursday, February 21st from 7:00–9:00 PM (see the flyer for complete details).

INS Business Meeting:
Learn about the INS organization and upcoming initiatives at the annual business meeting on Wednesday, February 20th from 12:00-1:00 PM in Westside Ballroom Salon 3.

Kaplan Lecture Luncheon:
Join us for the annual Kaplan Lecture on Saturday at 12:15, followed by the Kaplan Lecture Luncheon from 1:15-2:15 PM (advance RSVP required).

Special Entertainment by Gimagua
Gimagua, strumming and stepping their way through rumba, flamenco, cumbia, and Afro-Cuban rhythms, are identical twins and real showmen. Originally from Columbia, Gabriel and Guillermo Ariza are both guitarists and singers and have yet to meet a crowd they cannot win over. Gimagua has received wide media coverage and has appeared on Sabado Gigante, El Show de Cristina, Despierta America and various programs on Channel 11 in New York City. You might even see them perform throughout the NYC subway system.
All speakers (including Plenary and CE Speakers and all presenters in Paper and Symposia Sessions) are required to check-in at the Speaker Ready Room at least ONE HOUR prior to their assigned session.

**Speaker Ready Room**

The Speaker Ready Room is located in the 45th Street Registration desk on level 5.

**General Guidelines**

Presenters are not permitted to use their own computers or devices. In each lecture hall, presenters will have access to a laptop, mouse, laser pointer, and microphone.

A technician will be available during posted hours to help upload presentations to a central system. *Speakers are strongly encouraged to check-in well in advance of their scheduled presentation, preferably the day before if possible.* This will ease transitions between sessions where time is extremely tight.

---

**Paper Session Presenters**

All paper presenters must report to the Speaker Ready Room to upload their presentation by no later than one hour prior to their scheduled session.

Each paper session is 90 minutes in length and consists of five-six (5-6) individual presentations.

Each paper presenter will have approx. 12 minutes to present their paper (including time for their introduction by the session moderator). Then, immediately following each presentation, the moderator will guide a 3-minute question and answer period.

Please help the moderator and be respectful of other authors by staying within your allotted time, as each session is under a strict time limitation.

**Symposia Presenters**

All symposium presenters must report to the Speaker Ready Room to upload their presentation by no later than one hour prior to their scheduled session.

All symposia sessions are 90 minutes in length. It is up to the Symposium Chair’s discretion to divide the time amongst the individual abstracts, the discussant, and to allow time for audience discussion and questions. Please stay within the time allotted by the Symposium Chair, as each session is under strict time limits.

---

**Poster Presenters**

All poster sessions will take place in the Broadway Ballroom South on Level Six. *Please arrive 10 minutes prior to the start of your session in order to mount your poster.*

Please refer to the mobile app or the final program in Section II of this book for your final Poster Board Number, and then kindly mount your poster on the board labeled with your assigned number.

The presenting author must be present at the poster session and should remain with the poster to entertain questions for the duration of the session.

A volunteer will be available 10 minutes prior to the start of each poster session to distribute push-pins and assist authors with finding their assigned poster board.

**Poster Symposia Presenters**

*Please follow the instructions above for Poster Presenters.*

All poster symposia will occur in the Broadway Ballroom South on Level Six. Poster symposia occur during regular poster sessions, but are grouped together to allow authors to provide a cohesive presentation on their selected topic.
For a complete listing of scheduled presentations, please refer to Section II of this book. For a list of changes that have occurred since the program was finalized, please refer to the flyer with scientific program changes and additions.

The International Neuropsychological Society wishes to thank its generous sponsors for their support of the INS 47th Annual Meeting and of the society’s educational mission.

Through their sponsorship, these organizations make a valuable contribution to the success of the INS Annual Meeting and towards achieving the INS goals of further enhancing global-scale communication and collaboration between disciplines.

**University of Utah – Clinical Neurosciences Center**

Wednesday, 1:00-4:00 PM – Westside Ballroom Salon 2

CE Workshop 4 by Dr. Yana Suchy is supported by an unrestricted educational grant from our Premier Sponsor CNC, in proud support of the INS educational mission. (The INS maintains control over all educational content and materials)

**University of Calgary Faculty of Arts-Department of Psychology**

Wednesday, 6:30-7:30 – Broadway Lounge

Major Sponsor of the INS Welcome Reception

**NeuroPsych Norms**

Friday 3:15-3:30 Coffee Break

Please join us in the Exhibit Hall and enjoy a hot beverage courtesy of our generous sponsor! NeuroPsychNorms representatives look forward to meeting INS attendees at booth #13

**Kessler Foundation**

Friday 10:00-10:15 & Saturday 10:30-10:45 Coffee Break

Please join us in the Exhibit Hall and enjoy a hot beverage courtesy of our generous sponsor!
Pearson Clinical Assessment

Premier Sponsor and generous supporter of the INS educational mission.
Pearson representatives look forward to meeting INS attendees at Exhibit Booths 15, 16 and 17
www.pearsonclinical.com

Montefiore Medical Center/Albert Einstein College of Medicine

Thursday 3:45-4:00 Coffee Break
Please join us in the Exhibit Hall and enjoy a hot beverage courtesy of our generous sponsor!

Fordham University

Thursday, 10:45-11:45 AM – Broadway Ballroom North
Plenary B by Dr. Judy Illes is supported by an unrestricted educational grant from Fordham, in proud support of the INS educational mission. (The INS maintains control over all educational content and materials)

Center for Alzheimer's Care, Imaging and Research (CACIR) at the University of Utah

Friday, 9:00-10:00 AM – Broadway Ballroom North
Plenary D by Dr. Timothy Hohman is supported by an unrestricted educational grant from CACIR, in proud support of the INS educational mission. (The INS maintains control over all educational content and materials)
Exhibit Hall

All Annual Meeting attendees are invited to stroll through the INS Exhibit Hall, located in Broadway Ballroom South on Level Six, during open hours posted below. Take advantage of discount prices on many journals, books, testing materials, and more, offered especially by our exhibitors for registered INS meeting attendees.

Exhibit Hall Hours:

Wednesday, February 20  2:30 PM–4:00 PM
Thursday, February 21  7:45 AM–5:30 PM (Closed 1:15-2:15 PM for lunch)
Friday, February 22  9:30 AM–5:00 PM (Closed 12:30-1:30 PM for lunch)
Saturday, February 23  8:30 AM–12:15 PM

INS Awards Program

The International Neuropsychological Society’s Awards Program is intended to recognize the many achievements of accomplished INS members.

Awards Ceremony

Please join us in support of your deserving colleagues at the INS Awards Ceremony on Wednesday, February 20th at 5:30 PM in Broadway Ballroom North, where we will honor the recipients of this year’s awards.

We wish to thank Roy Kessels and the Awards Committee, as well as Jillian Tessier and the Student Liaison Committee, for their invaluable contributions to this meeting.

About the INS Awards Program

Major INS Awards

Major INS Awards are given in recognition of scientific achievement in Early Career, Mid-Career (the Arthur Benton Award), or for a Lifetime of Achievement in research, education or service in the field of neuropsychology. The INS Distinguished Career Award may be given to recognize those individuals who have enjoyed extended careers and who have made major, sustained contributions to the field of neuropsychology and the Society. The Paul Satz-INS Career Mentoring Award, given in honor of Dr. Paul Satz and sponsored by PAR, Inc., is given to recognize mentoring and teaching activities that have profoundly impacted the careers of students in the field of neuropsychology.

INS Program Awards

INS Program Awards are selected by the Program Committee for each INS Meeting in recognition of the Meeting’s most outstanding scientific contributions. For the Annual Meeting, program awards include the Nelson Butters Award for the most outstanding submission by a postdoctoral fellow, the Phillip M. Rennick Award for most outstanding submission by a graduate student, and the Laird S. Cermak Award for the best submission in the field of memory or memory disorders. In conjunction with the INS Program and Awards Committees, the INS Student Liaison Committee recognizes an additional five students for their meritorious abstract submissions at each INS meeting through the selection of the SLC Student Research Awards.

Nominations & Eligibility for the INS Awards Program

To inquire about award nominations, please visit the-ins.org/ins-awards, or email Ins@the-ins.org.

Nominations for Major INS Awards

The INS Awards Committee accepts nominations annually from INS members for major INS Awards, including Career or Lifetime Awards, and the Paul Satz-INS Career Mentoring Award. Nominations are welcome at any time, but must be submitted by certain dates in order to be considered for an award at specific upcoming meetings.

Winners are selected by the Awards Committee, according to posted criteria, with approval from the INS Governing Board.

Eligibility for INS Program Awards

All abstracts that are submitted to the Annual and Mid-Year Meetings are screened and considered for eligible Program Awards.

INS Awards Committee

The INS Awards Committee was created to recommend current and past members to the Board of Governors for the purpose of recognition of outstanding achievement in areas related to Neuropsychology.

Roy Kessels has served as the Chair of the INS Awards Committee since February 2016.

Previous INS Award Winners

Please visit the INS website for complete descriptions of each INS award and to view previous award winners:

Jane Holmes Bernstein, PhD

Dr. Bernstein obtained her PhD in linguistics from the University of Edinburgh in 1973, and from 1974-1975 she completed a NATO/Science Research Council fellowship in aphasia, neurolinguistics, and neuropsychology at the Aphasia Research Center in the Boston University/VA Medical Center. During that time, she learned from and was mentored by such luminaries as Edith Kaplan, Norman Geschwind, and Harold Goodglass. She became a member of INS in 1975. From 1976 onward, Dr. Bernstein has held academic appointments in the Department of Psychiatry at Boston Children's Hospital and Harvard Medical School. She currently holds the rank of Associate Professor, and is also a senior attending neuropsychologist. She served as Assistant Director of the Learning Disabilities Clinic at Boston Children’s Hospital from 1982-1990. She directed the Neuropsychology Program at Boston Children’s Hospital, and also served as Director of Training there, from 1987-2004. Under her guidance, Boston Children’s Hospital became one of the world’s foremost clinical and training sites for pediatric neuropsychology. To recognize Dr. Bernstein’s accomplishments over the years, the Harvard Medical School and Boston Children’s Hospital established of a named lectureship in her honor several years ago.

Dr. Bernstein has demonstrated an unwavering commitment to training, teaching, and mentoring in clinical neuropsychology lasting over four decades. She is the originator of a systematic approach to pediatric neuropsychology, the neurodevelopmental systems model, which guides all of her clinical, research, and training activities. Indeed, one of her great strengths as a supervisor, teacher, and mentor is that she adopts a consistent, principled approach to neuropsychology that transcends specific tests or assessment methods, and that helps trainees develop a clinical lens for viewing the “whole child.” Her model is rooted in understanding development as arising from the continuous interactions between a child’s brain and her or his environment.

Supervision with Dr. Bernstein is always firmly grounded in clinical neuroscience, but she also brings a humanistic perspective that sees children as more than their test scores, brain scans, or diagnoses. Supervision with Dr. Bernstein is never easy; she compels her trainees to think conceptually, systematically, and comprehensively. But she always does so in the service of increasing her trainees’ knowledge, improving their clinical judgment, and making them better clinician-scientists. Understanding a child is never enough for Dr. Bernstein; she demands that, as clinical neuropsychologists, we use our understanding to help children adapt successfully to the daily demands of their environments.

Dr. Bernstein is noteworthy for her commitment to extending neuropsychology globally, consistent with the mission of INS. She has supervised, taught, and mentored many students and trainees from outside North America, and many of them have returned to their home countries to share what they have learned. Even more notably, Dr. Bernstein has devoted a significant portion of her professional career since 1997 to providing neuropsychological services for disadvantaged children in the Republic of Trinidad and Tobago. In 2004, she began spending 50% of her time there, and developed a service-learning model that has provided many trainees with an amazing opportunity to gain international experience in the provision of neuropsychological services in a country and culture far different from their own.

Three of my own students have participated in the service-learning program over the years, and they all describe it as truly life-altering. More recently, Dr. Bernstein has also set out to build local capacity for professional services in Trinidad and Tobago, and she is now looking to expand her service-learning model to other countries in the Caribbean.

Dr. Bernstein has supervised, taught, and mentored dozens if not hundreds of trainees over the years. A list of her former trainees includes the directors of many of the top clinical and training programs in pediatric neuropsychology at leading children’s hospitals across the United States. That list includes Boston Children’s Hospital, Denver Children’s Hospital, Nationwide Children’s Hospital, Children’s National Health System, Kennedy Krieger Institute, Mt. Washington Pediatric Hospital, University of Virginia, Oakland Children’s Hospital, and UCSF Benoît Children’s Hospital. Her former trainees are not limited to children’s hospitals; a former trainee directs the program at the University of Miami Miller School of Medicine.

Dr. Bernstein’s former trainees also have made major professional and scientific contributions. Her past trainees have been elected to key leadership roles in our leading professional organizations. For example, they have served as President of INS, Secretary of INS, President of the Society of Clinical Neuropsychology (APA Division 40), President of the American Association of Clinical Neuropsychology (AACN), and President of the Association of Postdoctoral Programs in Clinical Neuropsychology (APPCN). Dr. Bernstein’s trainees have also made substantial academic and scientific contributions, many rising to the rank of Full Professor with tenure at their respective institutions, with a number being honored with named or endowed Chairs. Dr. Bernstein’s trainees have served on the Editorial Boards of numerous scientific journals, two have been Associate Editors of the Journal of the International Neuropsychological Society, and one was recently chosen as the new Editor of Neuropsychology. Dr. Bernstein’s former trainees have played a central role in promoting peer-reviewed credentialing among pediatric neuropsychologists. One of Dr. Bernstein’s former trainees—along with one of her former trainee’s trainees—helped form the “Be Ready for ABPP in Neuropsychology (BRAIN)” study support network to assist early career neuropsychologists in tackling the AACN/ABCN board certification process. They also published the book, Board Certification in Clinical Neuropsychology, which is widely regarded as the bible for preparing for board certification in North America.

Dr. Bernstein epitomizes an individual whose mentoring and teaching activities “have made a profound impact on careers of students in the field of neuropsychology,” the key criterion for the Paul Satz/INS Career Mentoring Award. When we also consider the trainees of her trainees—and their trainees—Dr. Bernstein’s reach becomes truly worldwide. She is the professional grandmother—and great-grandmother—of many leading pediatric neuropsychologists, all of whom consider themselves fortunate to have fallen into her sphere of influence.
INS Lifetime Achievement Award for Service:

Gordon J. Chelune, PhD, ABPP-CN

Gordon Chelune is the second person in the history of the INS to be honored with the INS Lifetime Service Award. Gordon became the INS Executive Director in 2014 after serving as a member at large on the Board from 2002-2005 and as INS Treasurer from 2008-2014. All of the INS presidents who have served with him were unanimous in their praise for his leadership. They noted that he is a thoughtful, passionate, and patient leader. Gordon also is a good listener. When you talk with him he is fully present, focused, and engaged despite the swirl of issues he manages as Executive Director. He is a master of organizational detail, which makes for some of the longest emails any of us have ever seen! As a result, though, he leaves a legacy of clearer and more transparent society procedures, which will be the critical foundation for the society’s future growth. Gordon has always taken pride in representing INS in a positive way. He clearly cares about the best interests of the society. Importantly he is also a pragmatist, being sure that the organization’s goals don’t outstrip its financial resources---one of the less glamorous but absolutely critical responsibilities of the Executive Director. But Gordon is not all work: He takes his networking responsibilities just as seriously, so he can always be found late at night and into the wee hours at the conference bar.

Immediately after he became Executive Director, Gordon moved the INS office to Salt Lake City and with the President began planning the development of a 5-year strategic plan, which was hammered out and approved by the INS Board in the summer of 2015 at the INS Pacific Rim Conference in Sydney. All of the INS presidents acknowledged Gordon’s critical role in developing this strategic plan to bring INS into a new era. The plan emphasized modernizing the INS office (including revamping the organization’s website) in order to increase operational efficiency, increasing member benefits (including educational resources such as video interviews of influential INS leaders and a more interactive newsletter), and expanding collaborations with other neuropsychology organizations throughout the world. The first inter-organizational Memorandum of Understanding (MOU) was signed with the Federation of European Societies of Neuropsychology in 2016, followed by the Australian Psychological Society College of Clinical Neuropsychologists in 2017, and the Latin American Society of Neuropsychology and Australasian Society for the Study of Brain Impairment in 2018. Negotiations are currently underway to establish MOUs with other organizations. More recently, Gordon has been instrumental in identifying additional sources of funding for INS—another critical step in the society’s development. All of these characteristics have made Gordon an excellent Executive Director of INS.

In addition to his contributions to INS, Gordon has also played significant roles in other neuropsychology organizations, serving as President of the National Academy of Neuropsychology and Society of Clinical Neuropsychology of the American Psychological Association, and as a board member of the American Board of Clinical Neuropsychology and the Association of Postdoctoral Programs in Clinical Neuropsychology. His honors include Fellow status in the Society of Clinical Neuropsychology, National Academy of Neuropsychology, and Society of Personality Assessment, with the latter recognizing his early work in personality assessment. He has also been recognized for his outstanding contribution to the Practice and Science of Clinical Neuropsychology by the National Academy of Neuropsychology. And, finally, in 2015 he was honored with the Distinguished Lifetime Contribution to Neuropsychology Award by the National Academy of Neuropsychology.

Gordon is Board Certified in Neuropsychology through the American Board of Clinical Neuropsychology of ABPP (1985). He has held a variety of faculty positions at the University of Georgia, San Diego VA and University of California at San Diego, and Cleveland Clinic Foundation. Since 2006, he has been a Professor at the University of Utah in the Department of Neurology. He has served on many federal grant review boards, journal editorial boards, and is well known for giving more than 80 workshops reflecting his broad research and clinical interests, including evidence based practice in a broad array of patients, the reliable change index, and neuropsychological changes with aging, dementia, and epilepsy.

Gordon’s research has always been translational in the true sense of the word. He has published over 115 peer-reviewed papers, which have had a strong influence on clinical practice. Much of his research focuses on the enhancement of accurate neuropsychological diagnosis across different populations (e.g., schizophrenia, epilepsy, multiple sclerosis, dementia). He has made significant contributions to our understanding of the psychometric characteristics of many standardized instruments, and was involved with many of the Wechsler standardization studies. Most importantly, his research brought the very influential reliable change index into the realm of neuropsychology. With his move to the University of Utah in 2006, Gordon’s clinical and research work began to focus more upon aging and dementia, as well as the impact of health variables on cognition. Given his outstanding record of contributions to INS and the field of neuropsychology, Gordon was chosen to receive the 2nd INS Lifetime Service Award.
Abstract

Learning is an essential aspect of cognition required for successful execution of many daily activities and is an essential component of adaptive behavior. Effective learning is often reliant on clear feedback and the ability to learn from feedback or action outcomes. Feedback is also an integral part of the rehabilitation environment. While this dopamine-dependent process has been shown to be impaired in various clinical populations such as in individuals with schizophrenia, Parkinson’s disease, etc., this topic has been largely neglected in multiple sclerosis (MS) and traumatic brain injury (TBI). In my work I am addressing this knowledge gap by examining how individuals with TBI and MS learn from feedback and how the fronto-striatal brain regions are engaged during feedback processing. The results suggest that feedback processing can be considered more effortful for these clinical populations.

Fatigue is another dopamine-dependent construct that has been shown to rely on the fronto-striatal brain regions and is a symptom that individuals with MS and TBI often experience. Given this neural common denominator between fatigue and outcome processing, I investigated whether fatigue can be reduced through engaging individuals with MS and TBI in a goal-directed behavior, showing that fatigue can be reduced through outcome presentation.

The prevailing hypothesis about the pathogenesis of Alzheimer’s disease (AD) suggests a cascade of biological events initiated by abnormal beta-amyloid processing that leads tau-related neuronal dysfunction, neurodegeneration, and dementia. This conceptualization has directly informed current diagnostic schemes, which have evolved from diagnosing AD based on the characterization of a clinical syndrome to diagnosing AD based on the presence of amyloid and tau biological markers alone. Despite fairly consistent observations showing a relationship of vascular risk factors and frank vascular disease with AD, vascular factors have not been incorporated formally into the proposed theoretical model of AD pathogenesis or newly proposed research criteria for AD. The gradual accumulation of vascular risk factors manifest in the brain as small vessel cerebrovascular disease, which is best visualized on MRI scans as white matter hyperintensities (WMH) on T2-weighted sequences. Over the past several years we have examined systematically the contribution of WMH to the clinical presentation of AD and tested the extent to which WMH and markers of AD pathology interact. Our research shows that WMH may reflect pathology that is independent of AD pathology, conferring additive risk or contribution to symptom presentation. Our work also shows that WMH may interact more directly with AD pathology, conferring a synergistic effect on clinical outcomes, or even promoting Alzheimer’s pathology directly. This talk will discuss pathogenic models of AD, review the evolution of diagnostic schemes for AD, and evaluate the role of small vessel cerebrovascular disease in AD.
Objective: Mild cognitive impairment (MCI) in non-clinic samples often have high prevalence and unclear predictive validity for dementia risk. We used longitudinal data from a community-based cohort to evaluate whether MCI stability over two years reliably identified people who would develop dementia.

Participants and Methods: We evaluated data from the Adult Changes in Thought study. Participants were >65, not demented at baseline, and seen every two years. Cognition was assessed with a screening test and participants with low scores were evaluated to identify incident dementia cases. At baseline, 1,721 participants were evaluated for MCI using Petersen et al. criteria. To examine MCI stability over the first two biennial visits, a convenience sub-sample of 708 was also evaluated. We evaluated conversion to dementia for the entire sample and the convenience sub-sample.

Results: At baseline, 738 of the 1,721 participants were identified with MCI (43%). Over a mean of 5.4 years of follow-up, 292 people (17%) developed dementia (200 with MCI, 68%, 92 without MCI, 32%). Baseline MCI was associated with increased dementia risk (Hazard ratio (HR) 3.1, 95% CI 2.5-4.0). For the convenience sub-sample, 254 participants had normal cognition at both time points (30%), 87 participants had MCI then normal cognition (13%), 121 participants had normal cognition then MCI (17%), and 246 participants had MCI at both time points (35%). Over a mean of 5.6 years of follow-up, 178 participants were diagnosed with dementia (25%). Compared to participants with normal cognition at both time points, participants with MCI then normal cognition had dementia HR 1.8 (95% CI 0.9-3.7), which was not significant. Participants with normal cognition then MCI had dementia HR 2.7 (95% CI 1.5-4.8) and people with MCI at both time points had dementia HR 7.1 (95% CI 4.4-11.3), both of which were significant.

Conclusions: Stability of MCI may be useful in identifying a small subset of people with very-high dementia risk.

There is a growing literature demonstrating a link between lower socioeconomic status (SES) and poorer neuroanatomical health, such as smaller total and regional gray and white matter volumes. Little is known, however, about the relation between SES and white matter integrity (WMI). Here we examined the relation between SES and WMI of the brain’s primary cortical regions, and evaluated potential moderating influences of age and self-identified race.

Participants and Methods: University students from the Bronx, NY (N=188; mean age=20.4) wore an at-home actigraphic device (Actiwatch Spectrum PRO; Philips Respironics Inc.) on the non-dominant wrist for an average of 10.5 days (range 6.8–21.0) to measure objective sleep behavior. Participants then returned to the laboratory and were administered neuropsychological tests. SEV was calculated as the intra-individual coefficient of variation (SD/VM x 100) of the percentage of time slept in the sleep interval. Spatial learning and memory were assessed using the maze efficiency index scores (correct moves per second) of the Cogstate Groton Maze Learning Tests (GMLT learning average, GMLT learning slope, GMLT recall).

Results: Linear regression showed that SEV predicted lower performance on tests of spatial learning (GMLT learning average, β = -0.18, p<0.05) and recall (GMLT recall, β = –0.17, p<0.05). Even after controlling for average total sleep time, SEV remained a predictor of poorer learning and memory across all GMLT measures (p<0.05).

Conclusions: Intraindividual variability in sleep quality predicts worse spatial learning and memory in young adults. Significant effects of SEV were over and above that of average total sleep time, suggesting unique contributions of variable sleep quality beyond mean sleep quality. Results highlight the importance of maintaining consistent sleep patterns for optimal cognitive functioning.
The INS Student Liaison Committee (SLC), in conjunction with the INS New York Program Committee, recognizes the following five students and trainees as well-deserving recipients of the SLC Student Research Award.

**#4. Objective Subtle Cognitive Decline, but Not Subjective Memory Complaint, Predicts Progression in Cognitively Normal Individuals**

**AUTHORS:** Kelsey Thomas, Emily C. Edmonds, Xinyi Cao, Christina G. Wong, Alexandra J. Weigand, Shanna Cooper, Douglas R. Galasko, David Salmon, Mark Bondi

**Paper Session 12. Aging- General**

Friday, 1:45-3:15 PM, Salon 2 (Westside Ballroom)

---

**#6. Inflammation and Preclinical AD: Associations Between Peripheral Inflammatory Biomarkers, Cognition, and Amyloid-β Deposition in Non-Demented Older Adults**

**AUTHORS:** Lauren Oberlin, Beth E. Snitz, Rachel Mackey, Oscar L. Lopez, Lewis Kuller, Kirk I. Erickson

**Paper Session 6. Neuroimaging**

Thursday, 2:15-3:45 PM, Salon 3 (Westside Ballroom)

---

**#6. Arterial Stiffening Moderates The Relationship Between Diabetes And White Matter Lesion Burden In Older Adults With Mild Cognitive Impairment**

**AUTHORS:** Madeleine Werhane, Kelsey R. Thomas, Katherine J. Bangen, Alexandra J. Weigand, Emily C. Edmonds, Daniel A. Nation, Erin E. Sundermann, Mark Bondi, Lisa Delano-Wood

**Paper Session 10. Stroke/Cerebrovascular**

Thursday, 4:00-5:30 PM, Salon 4 (Westside Ballroom)

---

**#122. Neurocognition in Post-Bilateral Globus Pallidus Interna Deep Brain Stimulation with Adjunctive Substantia Nigra Sural Nerve Graft in Parkinson’s Disease**

**AUTHORS:** Elizabeth Wallace, Jordan P. Harp, Stacey L. Brothers, Jorge E. Quintero, Craig G. van Horne, Frederick A. Schmitt, Lisa M. Koehl

**Poster Session 4. Adult Medical**

Thursday, 12:00–1:15 PM, Broadway Ballroom South

---

**#63. Working Memory and Information Processing in Attention-Deficit/ Hyperactivity Disorder**

**AUTHORS:** Lauren N. Irwin, Erica L. Wells, Elia F. Soto, Nicole Groves, Michael J. Kofler

**Poster Session 5. Pediatric & Neurodevelopmental**

Thursday, 2:30–3:45 PM, Broadway Ballroom South
Abstract Submission Deadline: March 4, 2019

Submit Abstracts Online at: https://ins2019.org/en/subscriptions/poster-presentations/

SBNp Presidential Address:
Rochele Paz Fonseca: Cognitive Reserve in Healthy Aging, MCI and Mild Dementia: Executive Functions, Episodic Memory and Neural Correlates

INS Presidential Address:
Vicki Anderson: Precision Medicine, Autism and Social Impairment: The Role of Neuropsychology

Plenary Keynote Addresses:
Vitor Haase: School Neuropsychology: Diagnosis of Dyscalculia
Roy Kessels: Learning From Your Mistakes? Efficacy and Mechanisms of Errorless Learning In Aging And Brain Disorders
Feggy Ostrosky: Child Abuse: Emotional Processing in Normal and Abnormal Conditions
Philip Zelazo: Executive Function and the Developing Brain

CE Workshops:
Antonio Verdejo García, Executive Functions and Decision-Making in Addictive Disorders
Paulo Mattos, Neuropsychology of ADHD
Skye McDonald, Social and Emotional Processing in Acquired Brain Disorders
Jennifer Vasterling, Neuropsychological Assessment in Post-Traumatic Stress Disorder

Use the CEFI Adult with confidence and gain accurate results regardless of brain trauma, cognitive impairment, or Alzheimer’s disease.

- Use the CEFI Adult’s nine comprehensive scales to guide targeted intervention
- Interpreting results has never been simpler with our acclaimed easy to read report options
- Rely on highly accurate results based on extensive norming

Special Offer!

Receive a FREE copy of Dr. Naglieri and Dr. Goldstein’s “Handbook of Executive Functioning” ($90 value) with purchase of any CEFI Adult Kit®

Available for a limited time while supplies last

Go to mhs.com/CEFIAdult or contact your MHS consultant for more details

*Some restrictions apply. Please see mhs.com/CEFIAdult for more details.

MHS.com/CEFIadult
The International Neuropsychological Society (INS) is a multidisciplinary, international organization dedicated to enhancing communication among the scientific disciplines that contribute to the understanding of brain-behavior relationships and to promoting the international and interdisciplinary study of these relationships throughout the lifespan. The Society’s emphasis is on science, education, and the applications of scientific knowledge.

INS members include cognitive and clinical neuropsychologists and psychologists, neurologists, psychiatrists, speech-language pathologists, and specialists of related disciplines. They include esteemed scientists and clinicians from the world’s most prestigious universities and institutions, private practitioners, and trainees just embarking on their careers.

INS Annual & Mid-Year Meetings

INS holds two meetings per year that provide a venue for cognitive and clinical neuroscientists from around the world to share their research and increase their understanding of the driving forces behind cognition and behavior.

The INS Annual Meeting is held in North America every February and the INS Mid-Year Meeting is held internationally every July. Each meeting offers three to four days of scientific and continuing education programming. Both INS meetings are open to members and non-members, and to professionals and trainees of all levels. Attendees represent neuropsychology and a variety of other disciplines.

New Members Welcome!

- INS welcomes new members! Prospective members may learn more about the Society and complete an online membership application at www.the-ins.org.

Benefits of Membership:

- **Discounted registration & CE rates** at both INS meetings
- **Expand your network** » Meet and get to know fellow members from all over the globe by attending an INS meeting, or through the expanded INS website
- **FREE access to JINS** » Available ONLY to INS members! Electronic access to JINS includes all previous years of publication—or pay just $54 per year to receive the printed edition by mail
- **INS Member Directory** » Exclusive online access for members only
- **INS Newsletter** » Exclusively for INS Members. Keeping you current with both INS news and current events around the globe in Neuropsychology
- **Video Interviews of Neuropsychology Leaders** » Member-only access of interviews with major thought leaders in the field and will include the Birch and Kaplan Lectures
- **Prestigious awards** » Nominate or be recognized for work in the field of neuropsychological science and education
- **Get involved** » Become active with committees or board leadership, and help guide the future of INS
- **Be a leader** » Work with the INS-SLC (Student Liaison Committee) or mentor a student associate member
- **Give back to your community** » Help support neuropsychology in developing countries
- **Matthews Fund & Book Depository** » Give back to your community and help support neuropsychology and educational programs in developing countries
- **Discounts on books and journals from selected publishers**

**Contact the INS at:**

- The International Neuropsychological Society (INS)
  2319 South Foothill Drive, Suite 260,
  Salt Lake City, Utah 84109, USA
  Phone: 801-487-0475 | Fax: 801-487-6270
  Email: ins@the-ins.org | www.the-ins.org

**Future INS Meetings**

- Rio de Janerio, Brazil 10-12 July 2019
- Denver, Colorado, USA 5-8 February 2020
- Vienna, Austria 1-4 July 2020
- San Diego, California, USA 3-6 February 2021
- Melbourne, Australia 1-4 July 2020
- New Orleans, Lousiana, USA February 2022
Plenary A. Concussion Outcomes in Children: Facts, Fictions, and the Future — Keith Yeates, PhD, INS President

Wednesday, 4:30–5:30 PM, Broadway Ballroom North

More than half a million US children visit an emergency department each year for traumatic brain injury (TBI), mostly for mild injuries, and the true number of concussions in children and youth likely numbers much higher, in the millions. Despite an exponential increase in research in recent years, distinguishing fact from fiction regarding the outcomes of childhood concussion can be very challenging. Neuropsychologists are by no means immune to this problem, as evidenced by the strident claims and counterclaims made on disciplinary list serves, in scientific journals, and at professional meetings. The goal of this presentation is to differentiate fact from fiction based on research conducted by the presenter and his colleagues over the past 25 years. Topics to be addressed include the role of performance and symptom validity testing, the utility of neuropsychological testing, the relative importance of injury and non-injury factors as predictors of recovery, and the capacity of prevention and treatment to reduce the incidence and morbidity of concussion. The presentation should help to dispel some ongoing misconceptions about the outcomes of childhood concussion; encourage a more evenhanded, evidence-based approach to parsing the complexity of this common injury; and suggest directions for future research that may help bring order out of the chaos that so often surrounds this topic.

Upon conclusion of this course, learners will be able to: 1) Describe common misconceptions about the outcomes of childhood concussion; 2) Summarize recent research on the outcomes of childhood concussion and its predictors.

Plenary B. Advances in Neurotechnology for Neurocognition: Balancing on the Tightrope of Discovery, Treatment, and Translation — Judy Illes, CM, PhD

Thursday, 10:45–11:45 AM, Broadway Ballroom North

This is a critical time in the history of discovery science and clinical care for patients with disorders of the brain and behavior. Neurotechnologies for modulating brain function and treating neurologic and psychiatric disorders are not only being newly developed, but earlier experimental technology is being re-modeled. The pace of this evolution is unprecedented: advances of the past 75 years far exceed those of the 2000 before them, and advances of the past 15 years exceed even those of the past 75. In this lecture, I will situate a series of studies focused on invasive and non-invasive approaches to modulating brain function in this context. I will discuss research that has generated news coverage of psychiatric neurosurgery from 1960-2016, reader reactions to news media, and multinational public opinion derived from extensive interviews and focus groups conducted around the world. I will also present evidence suggesting that, alongside the development of neurosurgical and wearable devices to intervene on neurocognition, there is a trend to legally protect their applications to the brain through broadly-written methods and device patents. Some of these are crossing a thin line of protecting brain biomaterial and regions. As I triangulate the findings of the various studies, I will consider the neuroethical questions they raise, and the impact they have on health care providers, patients, citizens, and society.

Upon conclusion of this course, learners will be able to: 1) Describe principles and strategies for research and clinical neuroethics inquiry relevant to neuropsychologists; 2) Explain trends in invasive and non-invasive approaches to mental health, neurodegenerative, and other disorders of the brain that have a neurocognitive component; 3) Discuss roles of and responsibilities of health care professionals in this exciting time in the neurological sciences for ensuring benefits, privacy, and justice for patients and families.

Plenary C. Generation of New Hippocampal Neurons in the Adult Brain: Implication for Mental Health — Sandrine Thuret, PhD

Thursday, 5:30–6:30 PM, Broadway Ballroom North

The adult mammalian brain can generate new neurons throughout life via the existence of small and sparse populations of neural stem cells dividing and differentiating into neurons. The hippocampus is one of the rare areas of the adult human brain where neurogenesis persists. During this plenary session we will explore how adult hippocampal neurogenesis is implicated in memory formation and mood regulation. We will also explore the environmental and molecular regulatory mechanisms controlling neural stem cell fate and show evidence that this hippocampal cellular population and neurogenesis can be used as targets for environmental prevention and pharmacological intervention aimed at cognitive decline and mood disorders.

Upon conclusion of this course, learners will be able to: 1) Summarize the concept of adult neurogenesis; 2) Discuss the possible functions of adult hippocampal neurogenesis; 3) Discuss factors that can influence adult hippocampal neurogenesis.
Describe fMRI evidence of social responses in adult human cortex; neuroimaging research produced evidence concerning when, how much, and how selectively these regions are active. The last decade, a number of new functional magnetic resonance imaging (fMRI) techniques for assessing high-level cognition and even conscious awareness, without the need for any behavioural response on the part of the participant. I will also describe rapid technological developments in the field of neuroimaging that revealing how modern statistical approaches can be leveraged to harness the heterogeneity in a complex disease like AD to identify novel treatment targets and help move the field towards precision interventions.

Upon conclusion of this course, learners will be able to: 1) Describe how to build robust resilience phenotypes using advanced statistical approaches; 2) Demonstrate how resilience metrics can be leveraged to identify novel treatment targets for AD; 3) Explore sex as a central biological variable in AD; 4) Demonstrate how sex differences in AD inform genetic models of resilience.

Upon conclusion of this course, learners will be able to: 1) Describe the fundamental debates about human nature.

The thought of being ‘locked in’ following a brain injury or aware during general anaesthesia troubles us all because it awakens the old terror of being buried alive. But what does it mean to be awake, but entirely unable to respond and what can this tell us about consciousness itself? In this lecture, I will describe rapid technological developments in the field of neuroimaging that revealing thoughts, actions and intentions based solely on the pattern of activity that is observed in the brain. For example, I will discuss a number of new functional magnetic resonance imaging (fMRI) techniques for assessing high-level cognition and even conscious awareness, without the need for any behavioural response on the part of the participant. I will also describe rapid technological developments in the field of neuroimaging that revealing how modern statistical approaches can be leveraged to harness the heterogeneity in a complex disease like AD to identify novel treatment targets and help move the field towards precision interventions.

Upon conclusion of this course, learners will be able to: 1) Describe how to build robust resilience phenotypes using advanced statistical approaches; 2) Demonstrate how resilience metrics can be leveraged to identify novel treatment targets for AD; 3) Explore sex as a central biological variable in AD; 4) Demonstrate how sex differences in AD inform genetic models of resilience.

I will also describe rapid technological developments in the field of neuroimaging that revealing how modern statistical approaches can be leveraged to harness the heterogeneity in a complex disease like AD to identify novel treatment targets and help move the field towards precision interventions.

Upon conclusion of this course, learners will be able to: 1) Describe the fundamental debates about human nature.

The thought of being ‘locked in’ following a brain injury or aware during general anaesthesia troubles us all because it awakens the old terror of being buried alive. But what does it mean to be awake, but entirely unable to respond and what can this tell us about consciousness itself? In this lecture, I will describe rapid technological developments in the field of neuroimaging that revealing thoughts, actions and intentions based solely on the pattern of activity that is observed in the brain. For example, I will discuss a number of new functional magnetic resonance imaging (fMRI) techniques for assessing high-level cognition and even conscious awareness, without the need for any behavioural response on the part of the participant. I will also describe rapid technological developments in the field of neuroimaging that revealing how modern statistical approaches can be leveraged to harness the heterogeneity in a complex disease like AD to identify novel treatment targets and help move the field towards precision interventions.
Proactive care provided by a transdisciplinary cognitive specialty team, integrating research and teaching with clinical care.

Quantitative brain MRI and 3-D stereotactic surface projection mapping of FDG-PET are our clinical routine.

Center for Alzheimer’s Care, Imaging & Research (CACIR)

650 Komas Drive Suite 106-A      Salt Lake City, UT 84108      801-585-6546       www.utahmemory.org

Kessler Foundation congratulates Dr. Ekaterina Dobryakova for receiving the INS Early Career Award at the 2019 International Neuropsychological Society Conference.

Ekaterina Dobryakova, PhD Senior Scientist Kessler Foundation
PEDIATRIC NEUROPSYCHOLOGIST OPPORTUNITY IN MONTANA

Practice Details: We are seeking a Pediatric Neuropsychologist who has experience evaluating and treating young children with autism and other neurodevelopmental conditions. Opportunities exist to develop your own practice tailored to your skillsets and interests to promote improved neurodevelopmental evaluation and intervention for our patients. Opportunities also exist for pediatric outpatient neuropsychological evaluation for a wide range of medical and psychiatric conditions. The ideal candidate would be a team player who is excited for the opportunity to develop their own practice while working with our dynamic and growing mental health provider team to develop a mental health service for the large catchment area of our hospital encompassing the entire state of Montana and surrounding rural areas. APA-approved graduate program and APA-approved internship is required.

Compensation and Benefits: Guaranteed base salary with RVU bonus opportunities; health, dental, paid disability and retirement match; malpractice insurance with tail coverage; 2 week CME/6 week PTO plan; generous sign on bonus/ relocation assistance.

Community and System Information: Central Montana is dominated by agriculture and outdoor adventure including, camping, hiking, horseback riding, water & snow skiing, rock & ice climbing, boating, off-road motor sports, upland bird, waterfowl, and big game hunting. While enjoying the Big Sky Country, known for breathtaking landscapes and an adventurous outdoor lifestyle, you’ll take pride in working for Benefis Health System, one of Montana’s most progressive and modern healthcare facilities with 500+ beds and over 285 members on medical staff representing 40 specialties. Awarded “Best Places To Work in Healthcare” over the last 5 years, 2014-2018, our state-of-the-art facilities and cutting edge technologies make Benefis an extremely competitive health system for both patient and employee alike.
Symposium Summary:
What is the potential for neurotechnology in neuropsychology? In this symposium we will explore the benefits and pitfalls of devices that can help people with neurologic and mental health disorders. In countries where healthcare resources are extremely limited, neurotechnology can prove particularly valuable, enabling virtual training, research and treatment, targeting many more people than a small number of medical professionals could otherwise reach. In developed countries, neurotechnology can enhance the care given to people with mental illness. But these new techniques raise important issues of policy, regulation, safety and efficacy, as well as social and ethical concerns. For example, data acquisition and privacy; the potential for modulating the brain; cultural differences; technology design and marketing versus genuine healthcare needs.

The speakers will give three very different perspectives on their experiences of using neurotechnology. A virtual hospital has been established in Egypt providing ‘Treat and Teach’ initiatives in healthcare service development that extends to Arab countries and the African continent, saving time, effort and cost associated with traditional forms of teaching. Nepalese and Canadian children living in poverty who are traumatized by their experiences of domestic violence, abuse and neglect can learn to manage their anxiety using mobile devices. Transcranial stimulation and deep brain stimulation could help treat people globally with substance abuse, but there is still considerable uncertainty around this.

With a focus on maximizing opportunities and benefits and minimizing the risks presented by neurotechnology, the panel will discuss the intersecting roles of neuropsychologists, ethicists, neuroscientists, engineers, clinicians and patients to encourage and inspire research and dialogue on the responsible use of advances in brain science.

Upon conclusion of this course, learners will be able to: 1) Describe the pros and cons surrounding the use of neurotechnology in neuropsychology; 2) Discuss examples of the use of neurotechnology in developing countries as well as developed countries with individuals living in extreme poverty; 3) Explain the ethical issues surrounding the application of neurotechnology in neuropsychology.

Symposium Abstracts:
- J. Illes, T. Emara, A. Antle, C. Barned Neurotechnology for Neuropsychology in Egypt, Nepal and Canada: Perspectives, Intersections and Opportunities (Summary)
- T. Emara Telenueroeducation Courses Connecting African and Arab Countries: The Treat and Teach Initiative
- C. Barned Addiction, Neurotechnology and Culture

Chair’s Biography:
Dr. Robin L. Peterson is a pediatric neuropsychologist and Assistant Clinical Professor in the Department of Rehabilitation at Children’s Hospital Colorado School of Medicine. She has a PhD in Child Clinical Psychology from the University of Denver. She is board certified in clinical neuropsychology and pediatric clinical neuropsychology through the American Board of Professional Psychology. Before earning her doctorate, she worked for several years as a kindergarden and first grade teacher. This work sparked her interest in understanding how all children learn to read.

Over the past decade, she has published peer-reviewed research addressing individual differences in language and literacy development, comorbidity among neurodevelopmental disorders, and outcomes following pediatric traumatic brain injury. Currently, she is a co-investigator with the NIH-funded Colorado Learning Disabilities Research Center. She also has a clinical and research interest in pediatric concussion, particularly identifying injury and non-injury factors that contribute to persistent problems within this population. She recently co-authored the book Diagnosing Learning Disorders (3rd Edition). From Science to Practice. She provides clinical and research mentorship to graduate students, interns, and postdoctoral fellows.
Symposium Summary:
The 2019 theme of the February meeting of the International Neuropsychological Society focuses our attention to the intersection of biological, psychological, and cultural factors impacting the neurosciences. In this invited symposium, we demonstrate how the biopsychosocial model varies and must adapt to the unique challenges, constraints, and culture of each setting for the conduct of effective neuroscience research, treatment, and education. Drawing from field research and outreach, clinical practice settings, and traditional biomedical, scientific settings across continents, we will highlight work in populations with Wernicke-Korsakoff Syndrome, epilepsy, BI, neurotoxic Konzo disease. Many of the factors impacting these studies likewise impact the growth and development of neuropsychology as a field. They highlight a paucity of assessment tools and normative standards, poor recognition of efficacy and relevance, lack of advanced training and supervision mentors and opportunities, lack of resources for sophisticated neuroscientific investigations, poverty and limited access to care, linguistic and literacy diversity, stigma, and impoverished health care systems. Still, despite these considerable challenges, neuroscience research and practice grows, studies are conducted adapting to and surmounting challenges, and multisite, multination networks advancing our work are emerging. Specific and broad ventures will be discussed.

Upon conclusion of this course, learners will be able to: 1) Describe how the biopsychosocial model of neuroscience and neuropsychology must vary and adapt to the challenges, constraints, and cultures of a global society; 2) Explain the factors that impact research and clinical work within and across countries and give examples in specific populations; 3) Assess the lessons learned to date about ways to promote multisite, multination networks to promote global neuroscience and neuropsychology.

Symposium Abstracts:

- D. Koltai, L. W. Braga, K. Robertson, M. M. Kajumba, M. J. Boivin, J. L. Ponsford
  Global Neuroscience: Impact of Culture, Resources, and Education (Summary)
- L. W. Braga Maximizing Resource Limitations with a Validated Model of Neuropsychological Rehabilitation in Brazil
- S. Bowden, K. M. Dingwell, J. F. Delima
  Research with First-Nation Australians: Challenges for a Scientific Neuropsychology
- M. M. Kajumba, D. Koltai, P. Chakraborty, P. Smith, M. Kaddumukasa, M. Kaddumukasa, A. Fuller, M. Haglund
  Understanding Practical and Cultural Drivers of Neuropsychological Health Care Utilization
- M. J. Boivin, D. Tshala-Katumbay, E. Kashala-Abotnes
  Faced and Lessons Learned in the Application of Global Neuroscience to Prevent Konzo Disease in the Democratic Republic of Congo

Chair's Biography:
Deborah Koltai (Attix) is the medical director of the Clinical Neuropsychology Service at Duke University Medical Center, where she is an Associate Professor in the Departments of Neurology, Psychiatry and Behavioral Science, and Neurosurgery. She is board-certified by the American Board of Clinical Neuropsychology and has a strong record of involvement in clinical research, mentoring students and junior faculty, and service to the profession on national levels. She is well known for her expertise in the area of diagnostic evaluation and intervention with elders, which is well captured in two texts: Geriatric Neuropsychology: Assessment and Intervention (Attix & Welsh-Bohmer, 2006) and A Practical Guide to Geriatric Neuropsychology (McPherson & Koltai, 2018). She also has multiple papers in the area of measurement, test security, validity, and advocacy. However, her current research focuses on establishing the cultural context of capacity building efforts in Uganda, as she works with Duke and Makerere University colleagues to increase access to epilepsy and neuropsychology care in East Africa.

Invited Symposium 3. Global Neuroscience: Impact of Culture, Resources, and Education
Friday, 1:45–3:15 PM, Broadway Ballroom North
Chair: Deborah Koltai, PhD
Co-Chair: Anthony Fuller, PhD
Presenters: Luca Braga, PhD, Martin Kaddumukasa, PhD, Stephen Bowden, PhD, Michael Boivin, PhD, MPH

Invited Debate. Going to Pot? Clearing Away the Smoke on Brain, Behavior, and Cannabis
Thursday, 4:00–5:00 PM, Broadway Ballroom North
Moderator: Raul Gonzalez, PhD
Presenters: Igor Grant, MD, Krista Lisdahl, PhD

Dr. Raul Gonzalez is a Professor of Psychology, Psychiatry, and Immunology at Florida International University (FIU), with affiliations to the Center for Children and Families and the Cognitive Neuroscience and Imaging Center at FIU. He obtained his PhD and training as a clinical neuropsychologist from the San Diego State University / University of California Joint Doctoral Program in Clinical Psychology, followed by a post-doctoral fellowship at the University of Illinois at Chicago Department of Psychiatry. His research focuses on neurocognitive risk factors and consequences of substance use disorders, with a focus on cannabis use and cannabis use disorders. His research program has been funded through the NIDA/NIH and he is currently a site PI for the Adolescent Brain Cognitive Development study, a historic longitudinal investigation of risk and resilience factors that contribute to healthy brain development and various outcomes in adolescence, including substance use and addiction.

Dr. Igor Grant is Distinguished Professor and Chair of Psychiatry and director of the HIV Neurobehavioral Research Program and the Center for Medicinal Cannabis Research at the University of California San Diego. Dr. Grant is a neuropsychiatrist who graduated from the University of British Columbia School of Medicine (1966), and received specialty training in psychiatry at the University of Pennsylvania (1967-1971), and additional training in neuropsychology and the Institute of Neurology (Queen Square) (1980-1981), London, U.K. Dr. Grant’s academic interests focus on the effects of various diseases on brain and behavior, with an emphasis on translational studies in HIV, and drugs of abuse. He has contributed to approximately 700 scholarly publications and is principal investigator of several NIH studies, including a NIDA P50 (Translational Methamphetamine AIDS Research Center – TMARC), and is co-director of the HIV Neurobehavioral Research Center (H-NRRC).

Dr. Krista Lisdahl is the Director of the UWM’s Brain Imaging and Neuropsychology (BrainI) Laboratory. The primary focus of her research is on the neurocognitive consequences of chronic drug use during adolescence and emerging adulthood and predictors of substance use onset in youth. More specifically, using magnetic resonance imaging (structural MRI, fMRI and DTI) and neuropsychological assessment, Dr. Lisdahl’s laboratory examines the effects of regular marijuana, alcohol, nicotine and ecstasy use on brain structure and function. She also attempts to explain individual differences by examining whether genetics, gender, or lifestyle factors such as aerobic fitness moderate these effects. She is a PI or Consultant on three large-scale multi-site neuroimaging studies examining the impact of substance use on the developing adolescent or young adult brain [the MTA Neuroimaging Study; the IDEAA Consortium; the Adolescent Brain Cognitive Development (ABCD) study]. Her research and mentoring has been recognized by a Presidential Early Career Award in Science and Engineering (PECASE). She is also the Chair of Women in Neuropsychology (http://www.scn40.org/piac-win.html) Subcommitte within the APA Society for Clinical Neuropsychology.
Featured Media Panel. Concussion Science and the Media: The Good, the Bad, and the Ugly

Saturday, 9:00–10:00 am, Broadway Ballroom North

Moderator: Keith Yeates, PhD
Presenters: William B. Barr, PhD, Karen Postal, PhD, Jason Chung, JD, Daniel Engber

Dr. Barr is a board-certified clinical neuropsychologist and the Director of Neuropsychology in the Department of Neurology at the NYU-Langone Medical Center. He is an Associate Professor of Neurology and Psychiatry at the NYU School of Medicine. He has served on the advisory boards of many professional organizations and is the Past President of the Society for Clinical Neuropsychology (Division 40) of the American Psychological Association. Dr. Barr has been involved in both clinical and research approaches to sports concussion since the early 1990’s. He has served as the neuropsychological consultant to a number of high schools and colleges in the metropolitan New York region and to professional sports teams, including the New York Jets and New York Islanders. He has conducted research studies on athletes at the high school, collegiate, and professional levels. His work has focused on the methodologic applications of neuropsychological assessment in the athlete population and continues to serve as a consultant to many ongoing studies of athletes at all levels of competition.

Dr. Karen Postal is board certified in clinical neuropsychology and pediatric neuropsychology. She is the immediate past president of the American Academy of Clinical Neuropsychology, and a past president of the Massachusetts Psychological Association and Massachusetts Neuropsychological Society. She is a clinical instructor at Harvard Medical school where she teaches postdoctoral fellows in neuropsychology. Her research focuses on helping clinicians and neuroscientists improve communication with patients and the general public. She has a lifespan private practice dedicated to helping people think better in school, at work, and throughout later life.

Jason Chung is an attorney and senior researcher at NYU Sports and Society where he writes on law and public policy issues in health care and sports. He has also written and commented on health care issues for publications in the US and abroad such as the Boston Globe, CBC News, Newark Star-Ledger and The Health Care Blog. He also is the co-founder of The Deductible, a healthcare publication.

Daniel Engber is a columnist for Slate, where he writes about science, journalism, and reproducibility in psychology and biomedicine. He is also a regular contributor to New York Times Magazine and Wired. He was the winner of the National Academies of Science Communication Award in 2012. His work has been anthologized in the Best of Technology Writing series as well as Best of Slate: A 10th Anniversary Anthology.
CE Course Registration

Continuing Education (CE) options listed below are not included in the general registration fee. You must register and pay additional fee(s) in order to attend CE workshops, or to receive CE credit for attending plenary sessions. Your name badge is required for admittance to CE Workshops, and will contain the session number of any CE sessions for which you are registered.

How to Obtain CE Credits

After Registering

Please take the attendance slip from the proctor as you enter, complete it during the session, and return it to the proctor as you exit (your full attendance must be documented in order for credits to be granted). An online evaluation form must also be completed in order for credits to be given. Once the evaluation is completed, a certificate of completion may be downloaded. Evaluations will be available online at the INS website by approximately 24 hours after each session has concluded.

To access online evaluations, visit the INS website at www.the-ins.org, then simply follow the link on the home page to obtain CE credits for the 2019 Annual Meeting.

CE Workshops

All CE workshops require advance registration and an additional fee in order to attend. All 1.5-hour CE workshops are scheduled from 7:20 – 8:50 AM and include a continental breakfast that is served from 7 – 7:15 AM (morning sessions will begin promptly at 7:20 AM).

Plenary Sessions

All plenary sessions are offered for one hour of CE credit. A separate fee must be paid — either before or following completion of the plenary session — and all CE requirements must be met in order for credit(s) to be granted.

Please Note: In order to receive continuing education credit(s) for participation in Plenary Sessions, either now or at a later time, attendees must obtain an attendance slip from the volunteer upon their entry to the session and must submit the completed slip to the volunteer upon their exit. No credits can be granted, at present or in the future, without submission of completed attendance slips.

INS CE Committee

Melissa Lamar has served as Director of INS Continuing Education since February 2018.

APA Continuing Education Credit

The International Neuropsychological Society is approved by the American Psychological Association to sponsor Continuing Education for psychologists. INS maintains responsibility for this program and its content. Up to 20.5 credit hours are available for this program. All CE sessions are geared for advanced level instructional activity.
CE WORKSHOPS

CE Workshop 1. The Use of Neuroimaging and Computational Approaches to Inform Interventions for Mood Disorders — Faith Gunning, PhD

WEDNESDAY, 9:00 AM–12:00 PM, WESTSIDE BALLROOM (SALON 2)

Advances in neuroimaging methods and computational approaches provide an unprecedented opportunity to advance our understanding of the role of specific brain networks involved in the expression and course of mood and disorders. In addition, these sophisticated neuroscience approaches can provide distinct targets for novel interventions for cognitive and affective symptoms. This session will present the results of state-of-the-art neuroimaging and computational approaches that are being used to better understand the neurobiological underpinnings of mood and disorders. Examples will be provided, including a novel computational approach that is reliant on machine learning of resting state fMRI scans to successfully classify individuals into neurobiologically-defined subtypes of depression. In addition, the promise and current limitations of such approaches for informing treatment development and matching patients to treatments will be presented. The session will conclude with examples of interventions designed to target specific brain network dysfunctions to improve symptoms of mood disorders.

Upon conclusion of this course, learners will be able to: 1) Discuss evidence for current computational neuroimaging-based approaches to identifying subtypes of mood disorders; 2) Critically evaluate efficacy of current subtype-guided treatments; 3) Consider and discuss promising future directions for the use of neuroimaging and computationally based approaches for treatment development and selection for individuals suffering from mood disorders.

Faith Gunning, PhD
Associate Professor of Psychology in Psychiatry, Weill Cornell Medicine
Vice Chair for Research and Vice Chair for Psychology, Weill Cornell’s Department of Psychiatry

WEDNESDAY, 9:00 AM–12:00 PM, WESTSIDE BALLROOM (SALON 4)

Cognitive control theories suggest dissociable, but interacting, component processes necessary for goal-directed behaviors, emotional regulation, and environment- and performance-monitoring. Neuroanatomically, cognitive control functions are often represented by a dynamic interchange between areas of the medial and pre-frontal cortices, though the specificity of such neuroanatomical distinctions is challenged. Cognitive control dysfunction is a frequent symptom of psychiatric and neurologic illness or injury and often manifests as behavioral impulsivity and failure to accurately perceive and monitor the self- and environment. This course will focus on young- to mid-life adulthood and will first review basic research findings and theories of cognitive control and the controversy in identification of component process functions and anatomical correlates. Second, the course will cover the behavioral manifestations and implications of cognitive control component process dysfunction across a range of psychiatric and neurologic conditions—including case examples and focusing on the dissociation of component process dysfunction and awareness across the range of traumatic brain injury (TBI) severity. Third, the course will cover rehabilitation of cognitive control processes, with an emphasis on a biopsychosocial model of treatment including exercise and behavioral strategies for rehabilitation in people with TBI and psychiatric illness.

Upon conclusion of this course, learners will be able to: 1) Compare the major theories of cognitive control and identify the neuroanatomical correlates of specific cognitive control component processes; 2) Identify the primary symptoms of cognitive control component process dysfunction following TBI and in people with psychopathology; 3) Explain evidence-based rehabilitation treatments for people experiencing cognitive control dysfunction.

Michael J. Larson, PhD
Professor of Psychology, Brigham Young University

CE Workshop 3. If Only I had a Crystal Ball: The Role of Functional Neuroimaging in Predicting Future Cognitive Function in Children with Epilepsy — Amanda Wood, PhD

WEDNESDAY, 9:00 AM–12:00 PM, WESTSIDE BALLROOM (SALON 1)

Advances in neuroimaging techniques have offered unique insights in to the onset and course of many neurological conditions. Functional imaging tools such as functional magnetic resonance imaging (fMRI) or magnetoencephalography (MEG) enable us to visualize brain activity in vivo and may therefore prove useful in clinical practice. In particular, much hope was held that they might replace more invasive techniques or even the need for clinical evaluation in people undergoing resection of eloquent cortex. This is particularly attractive in the paediatric setting, where tolerance of painful or lengthy procedures is low.

Neuropsychological assessment has been a mainstay of presurgical evaluation of hemispheric dominance and localization of functions for adults with epilepsy. In this course, we will first review the neuropsychological characteristics associated with epilepsy in childhood that warrants surgical intervention. Reference will be made to adult models and particular emphasis given to evaluation of risk to eloquent cortex. We will then review basic principles of functional neuroimaging techniques and how they are applied to clinical decision making. The evidence for clinical utility of fMRI and MEG in children with refractory seizures will be presented, prior to a discussion of future directions for imaging predictors of later neuropsychological function.

Upon conclusion of this course, learners will be able to: 1) Describe the underlying basis of signals generated functional neuroimaging techniques and the principles of paradigm design and analysis relevant to children; 2) Describe typical neuropsychological presentations in children and adults with refractory epilepsy requiring resection of eloquent cortex; 3) Discuss the benefits and limitations of fMRI and MEG to predict postoperative neuropsychological function; 4) Summarise key developments in imaging analysis that might impact on decision making in the neuropsychology clinic.

Amanda Wood, PhD
Professor of Developmental Neuropsychology and Director, Aston Brain Centre, Aston University, Birmingham UK
Principal Research Fellow at Murdoch Children’s Research Institute, Melbourne Australia

CE Workshop 4. Contextually Valid Executive Assessment (ConVExA): A New Approach to Addressing Ecological Validity in Assessment of Executive Functions — Yana Suchy, PhD

WEDNESDAY, 1:00–4:00 PM, WESTSIDE BALLROOM (SALON 2)

Despite extensive evidence that the domain of executive functioning (EF) represents the strongest predictor of daily functioning, tests of EF have long been criticized as having poor ecological validity. During the first half of this workshop, empirical evidence for and against ecological validity of EF tests will be reviewed and common sources of error in making functional predictions will be identified. Recommendations for improving both research and clinical utility of EF tests toward valid functional predictions will be offered. The second half of the workshop will introduce the Contextually Valid Executive Assessment (ConVExA) model, which proposes that the association between EF and daily functioning is both mediated and moderated by a variety of contextual factors, including acute and fluctuating factors such as pain, sleep quality, emotion regulation demands, and life complexity, as well as stable factors such as personality and cognitive reserve. Existing empirical supports for the model will be reviewed, and the first steps toward the application of the ConVExA model in research and clinical practice will be offered.

Upon conclusion of this course, learners will be able to: 1) Summarize the evidence for and against ecological validity of EF tests; 2) Name the sources of error in functional predictions and explain how to address them in research and clinical practice; 3) Explain the premise of the ConVExA model and its theoretical and clinical contributions to making valid functional predictions.

Yana Suchy, PhD, ABP-PN–CN
Professor of Psychology and an adjunct Professor of Neurology at the University of Utah

Michael J. Larson, PhD
Professor of Psychology, Brigham Young University

Faith Gunning, PhD
Associate Professor of Psychology in Psychiatry, Weill Cornell Medicine
Vice Chair for Research and Vice Chair for Psychology, Weill Cornell’s Department of Psychiatry

Amanda Wood, PhD
Professor of Developmental Neuropsychology and Director, Aston Brain Centre, Aston University, Birmingham UK
Principal Research Fellow at Murdoch Children’s Research Institute, Melbourne Australia

Yana Suchy, PhD, ABP-PN–CN
Professor of Psychology and an adjunct Professor of Neurology at the University of Utah

Amanda Wood, PhD
Professor of Developmental Neuropsychology and Director, Aston Brain Centre, Aston University, Birmingham UK
Principal Research Fellow at Murdoch Children’s Research Institute, Melbourne Australia

Yana Suchy, PhD, ABP-PN–CN
Professor of Psychology and an adjunct Professor of Neurology at the University of Utah
This workshop will discuss recent evidence highlighting the need of a paradigm shift in the early detection of memory impairments in people at risk of AD. Basic and clinical research that have led to the identification of structures within and outside the medial temporal lobe that are critical for low-level memory functions compromised in AD in the preclinical stages will be reviewed. Hypotheses on how such functions can be reliably assessed will be considered in the light of challenges faced by a globalized world (i.e., ageing, literacy and diversity). Second, current research will be discussed that is aimed at understanding how assessment of such cognitive functions can be combined with neuroscience methods aimed at gathering biological evidence to yield affordable cognitive biomarkers of AD. The impact that such biomarkers can have on the Global Dementia Challenge will be highlighted. Third, the workshop will cover new translational research that involves the incorporation of novel theories of cognitive decline in AD for use in technology driven interventions that follow ethnographic and person-centered approaches.

Upon conclusion of this course, learners will be able to: 1) Have an updated explanation of the neuroanatomy of memory decline in AD; 2) Be able to appraise and design novel forms of culturally valid assessment; 3) Utilize this information to discuss, plan, and implement technology driven interventions within the context of interdisciplinary research.

Upon conclusion of this course, learners will be able to: 1) Demonstrate knowledge on the history & current status of the opioid crisis; 2) List the ways opioid use affects brain & cognitive function; 3) Discuss the impact of two commonly used opiate agonist treatments (methadone & buprenorphine) on cognitive function.
Dementia is an umbrella term used for a range of neurological conditions that include resulting in progressive and widespread neuropsychological impairment. The experience of dementia is linked strongly to the caregiving processes with most care provided by informal caregivers, at least in the early stages of illness. The course will consider what factors impinge the psychological wellbeing of caregiver also considering caregiving in different conditions, such as Alzheimer’s disease and the behavioural variant of frontotemporal dementia. It will also consider the factors that help caregivers to ‘live well’ with the experience of dementia and the stresses and strains of caregiving, including the psychological factors that impinge on care and the features of the person with dementia. The course will also cover ways of supporting caregivers in the light of what about such factors.

Upon conclusion of this course, learners will be able to: 1) Describe the factors that can impact on caregiver wellbeing, including how these may vary according to carer and the person with dementia characteristics; 2) Discuss the empirical work determining best outcomes in approaches to supporting caregivers. The course is orientated to those with intermediate knowledge of this topic.

CE Workshop 10. Air Pollution and the Adult Brain: Impact on Cognition, Dementia, and Mood — Melinda C. Power, ScD

Environmental pollutants can affect many aspects of human health. The impact of pollutants on brain health is an area of active research. This workshop will review what we know about the relationship between one common and ubiquitous environmental pollutant, air pollution, and adult cognitive and mental health. First, we will begin with an introduction to how we study health effects of air pollution. Second, we will provide an overview of the mechanisms by which air pollution may adversely impact the human brain. Third, we will examine the potential impact of air pollution exposures on adult cognitive health, including cognitive status, cognitive change, incident dementia, and common pathologies related to cognitive impairment. Fourth, we will consider the potential impact of air pollution exposure on adult anxiety, depression, and suicide. Finally, we will conclude with a discussion of the relevance of the population-level research on this topic to the work of clinicians and clinical care settings.

Upon conclusion of this course, learners will be able to: 1) Explain how population-level studies assess the potential impact of air pollution on adult cognitive or mental health; 2) Describe what is known about the relationship between air pollution exposures and adult cognitive and mental health. Given the ubiquitous nature of environmental exposures, one goal of this workshop is to increase awareness and interest in the role of the environment on the state of adult cognitive and mental health.
The International Neuropsychological Society requires program planners and instructional personnel to disclose information regarding any relevant financial and non-financial relationships related to course content prior to and during course planning. The intent of this disclosure is not to prevent a speaker with a significant financial or other relationship from making a presentation, but rather to provide listeners with information on which they can make their own judgments. It remains for the audience to determine whether speaker interests or relationships unduly influence a presentation with regard to exposition or conclusion.

Relevant financial relationships are those relationships in which the individual benefits by receiving a salary, royalty, intellectual property rights, gift, speaking fee, consulting fee, honoraria, ownership interest (e.g., stocks, stock options, or other ownership interest, excluding diversified mutual funds), or other financial benefit. Financial relationships can also include “contracted research” where the institution receives/manages the funds and the individual is the principal or named investigator on the grant.

Relevant non-financial relationships are those relationships that might bias an individual including any personal, professional, institutional, or other relationship. This may also include personal interest or cultural bias.

**INS Program Planners**

- **Melissa Lamar**, CE Director
  - No relevant financial or nonfinancial relationships exist.

- **Michael Kirkwood**, Program Chair
  - No relevant financial or nonfinancial relationships exist.

**Instructional Personnel**

- **Alissa Antle** – Invited Symposium 2
  - No relevant financial or nonfinancial relationships exist.

- **Clauclia Barned** – Invited Symposium 2
  - No relevant financial or nonfinancial relationships exist.

- **Paul Bloom** – Plenary F
  - No relevant financial or nonfinancial relationships exist.

- **Michael Boivin** – Invited Symposium 3
  - No relevant financial or nonfinancial relationships exist.

- **Lucia Braga** – Invited Symposium 3
  - No relevant financial or nonfinancial relationships exist.

- **Markéta Caravolas** – Invited Symposium 2
  - No relevant financial or nonfinancial relationships exist.

  - No relevant financial or nonfinancial relationships exist.

- **Julie Washington** – Invited Symposium 2
  - No relevant financial or nonfinancial relationships exist.

- **Amanda Wood** – CE 3
  - No relevant financial or nonfinancial relationships exist.

- **Keith Yeates** – Plenary A
  - Relevant financial relationship(s): Dr. Yeates receives royalties as a book editor from Guilford Press and Oxford University Press. Relevant non-financial relationships: None.
ANCILLARY MEETINGS

INS is pleased to host ancillary meetings, organized by individuals and professional groups who are attending the 47th Annual Meeting.

Please note that INS name badges must be worn when using ancillary space, and only ancillary meetings that have been pre-authorized by the INS Executive Office are permitted.

The following schedule of ancillary meetings is provided for the convenience of our attendees and may not be complete. Additional meetings and changes will be posted on the message boards located near the INS Registration Desk.

The International Neuropsychological Society owes a debt of gratitude to all participating student volunteers for lending their support at INS New York 2019.

Student volunteers play a critical role in the success of the INS Annual Meeting through their assistance in proctoring CE courses, monitoring poster sessions, and assisting at the Registration Desk—and in making the Annual Meeting a friendlier place for all attendees!

We sincerely thank our wonderful volunteers for their assistance and unbridled enthusiasm and commitment to INS.

Changes to the Final Program Posted On-Site

Sessions and room locations listed in Section II of this book are preliminary and may have changed since the time of printing based on enrollment or other factors.

Please check on-site materials and signage in New York, or the INS 2019 meeting app, for final room assignments and any changes to the Final Program.

Final Addendum of Author Changes

A list of important author changes that have occurred since the time of printing will be available on-site. The online published meeting proceedings will include a final addendum with all author changes that occurred since finalization of the printed program, including author additions, author changes, and other minor adjustments.

Submitting Abstract Author Disclosures

The electronic program book, available on the INS website at www.the-ins.org, contains a complete listing of submitting abstract author disclosures.

The International Neuropsychological Society requires all presenters to disclose to the audience any significant financial interest or other relationship with the manufacturer(s) of any commercial product(s) and/or provider(s) of commercial services discussed in an educational presentation and with any commercial supporters of the activity. The intent of this disclosure is not to prevent a speaker with a significant financial or other relationship from making a presentation, but rather to provide listeners with information on which they can make their own judgments. It remains for the audience to determine whether speaker interests or relationships unduly influence a presentation with regard to exposition or conclusion.

Please visit the INS website to view the electronic program book and a complete listing of submitting abstract author disclosures.
NEUROLOGY PHYSICIAN CAREER OPPORTUNITY

Memorial Healthcare System's Neuroscience Institute is seeking a neurologist to join a growing, subspecialized neurology group. All candidates must be BE/BC in general neurology, and while not mandatory, those with subspecialized training in movement disorders or behavioral neurology are encouraged to apply. The successful physician will collaborate with a multidisciplinary team of fellow neurologists, neurosurgeons, neuropsychologists, and neuroradiologists to provide cutting edge neurological care in both an inpatient and outpatient setting.

This is a full-time employed position with the multispecialty Memorial Physician Group. The position offers a competitive benefits and compensation package that is commensurate with training and experience. Professional malpractice and medical liability are covered under sovereign immunity.

About Memorial Neuroscience Institute

Memorial Neuroscience Institute uses advanced technology and innovative procedures to treat a broad spectrum of neurological conditions, including neuro oncological, neurovascular, neuromuscular and neuroinflammatory. The institute offers a wide range of surgical services including pituitary surgery, functional neurosurgery, cerebrovascular neurosurgery and spine surgery. Memorial Neuroscience Institute also offers minimally invasive procedures such as image-guided brain surgery, minimally invasive spine surgery and neurovascular intervention. The institute has been named a Neuroscience Institute of Excellence, is a Level 4 Epilepsy Center by the National Association of Epilepsy Centers (NAEC), is an Advanced Comprehensive Stroke Center by the Joint Commission and has been awarded the Target: Stroke Honor Roll Elite Plus Achievement Award for excellence in treating stroke.

About Memorial Healthcare System

Memorial Healthcare System is one of the largest public healthcare systems in the United States. A national leader in quality care and patient satisfaction, Memorial has ranked 11 times since 2008 on nationally recognized lists of great places to work.

Located in South Florida, the region offers an urban/suburban lifestyle with an abundance of cultural and recreational amenities. With its miles of beautiful beaches, top-rated golf courses, museums and world-class dining, South Florida offers an excellent quality of life. In addition, Florida has no state income tax.

To submit your CV for consideration, please visit memorialphysician.com. Additional information about Memorial Healthcare System can be found at mhs.net.
